This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample pack consisted of two known bloodstains on FTA Micro cards (Items 1 & 2), and two questioned stains; one on clean, yellow fabric (Item 3) and one on clean, blue fabric (Item 4). Participants were requested to analyze these items using their existing protocols.

**SAMPLE PREPARATION:** The stains on Items 1, 2, 3, and 4 were prepared using human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. Items 1 (75  $\mu$ l) and 3 (50  $\mu$ l) were created using blood collected from the same male donor. Items 2 (75  $\mu$ l) and 4 (50  $\mu$ l) were created using blood collected from the same male donor, different from the donor used for Items 1 and 3. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on April 16, 2019 following completion of the verification stage.

**SAMPLE SET ASSEMBLY:** For each sample set, all four Items (1-4) were packaged into separate envelopes and then placed together in a pre-labeled sample pack envelope. The sealed sample pack envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

**VERIFICATION:** All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR loci.

## Summary Comments

The 19-5703 Forensic Biology test was designed to allow participants to assess their proficiency in the identification and comparison of dried stains by means of body fluid screening and/or DNA profiling. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Items 1 and 3 were each created using blood from the same male donor. Items 2 and 4 were each created using blood from the same male donor, different from the donor used for Items 1 and 3. (See Manufacturer's Information for preparation details)

Data were returned by 366 participants.

### Screening Test Results:

Screening results were returned by a total of 345 participants. However, not all of these participants returned screening results for all fluids (blood, semen, saliva) for both questioned items, which explains the large differences in the tallies discussed below.

For Item 3, all 343 participants that returned results reported "Positive" for the presence of blood. For the presence of semen, all 141 participants that returned results reported "Negative". For the presence of saliva, all but one of the 69 participants that returned results for saliva reported "Negative" results. The one remaining participant reported "Inconclusive" results.

For Item 4, all 343 participants that returned results reported "Positive" for the presence of blood. For the presence of semen, all 143 participants that returned results reported "Negative" results. For the presence of saliva, all but one of the 63 participants that returned results for saliva, reported "Negative" results. The one remaining participant reported "Inconclusive" results.

### DNA Analysis Results:

Of the 348 participants that returned results, 338 reported DNA interpretations. Eight participants stated that the samples were only analyzed for database purposes and two selected the "No Interpretations" option individually for all Interpretation questions.

For the Item 3 stain, all participants that reported interpretations included the victim (Item 1) and excluded the suspect (Item 2) as possible contributors.

For the Item 4 stain, all participants that reported interpretations excluded the victim (Item 1) and included the suspect (Item 2) as possible contributors.

There were no participants who reported allelic results that differed from consensus/predistribution for the known samples (Items 1 and 2). A total of 14 participants reported allelic results that differed from consensus/predistribution for the questioned samples (Items 3 and 4). Most of these participants reported an additional allele at one or more loci with many of these participants reporting utilizing probabilistic genotyping (PG) software and indicating in their comments that filters may not be applied for some or all reported loci. Based on the interpretations above, these inconsistencies did not appear to affect these participants' conclusions.

Of the total participants returning DNA results, 30% reported the use of PG software. There were several types of software used. However, the genotyping software STRmix was reported most frequently by participants.

## Key for Screening Tests Used

Participants were asked to use, where possible, the following chart of abbreviated screening test names. This was not an all inclusive list and was not designed to determine what tests should be performed. Participants were advised that tests not on this list may be used for screening.

Test	Abbreviation
Acid Phosphatase	AP
Kastle Meyer	KM
Leucomalachite Green	LMG
Microscopic	Micro
Ortho-tolidine	O-tol
Phenolphthalein-Tetramethyl benzidine	PTMB

29Y9VT	Minifiler was also used to amplify Item 4. Concordant results were obtained for Item 4 in Globalfiler and Minifiler. Globalfiler Express was also used to amplify Item 2. Concordant results were obtained for Item 2 in Globalfiler and Globalfiler Express.
2E97P8	Items 1 and 2 were ran with both GlobalFiler and GlobalFiler Express.
2PE4TN	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
2TCVJM	Minifiler was also used to amplify Item 3. Concordant results were obtained for Globalfiler and Minifiler.
32WEGR	The laboratory does not provide an allele table in the report; therefore, this procedure is used only for reporting the results of proficiency tests.
37DNRB	Y-screening analysis conducted only. For Item 3, male DNA was detected. For item 4, male DNA was detected.
3DP3WY	Probabilistic genotyping (STRmix) used for data analysis with stutter peaks filtered.

Quality Control: Reagent blank, positive and negative control were carried out through analysis and all gave intended results.
74C2HF	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. 82KBWN	The laboratory does not provide an allele table in the report, therefore this procedure is used only for reporting the results on proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotype are listed for reference samples, and 99% weighted alleles present are listed for evidence samples.

**Scenario:**

Police are investigating the possible assault of a male victim. The victim claims he was walking home when a man approached him and asked him for money. When the victim refused, the man tackled him to the ground and beat him before running off. A bystander witnessed the scuffle and called the police who were able to apprehend the suspect. Investigators are submitting a stain from the shirt (Item 3) the suspect was wearing and a stain from the pants (Item 4) the victim was wearing. Also collected were known blood samples from the victim (Item 1) and the suspect (Item 2).

**Items Submitted (Sample Pack B3):**

Item 1: Known blood from the male victim

Item 2: Known blood from the male suspect

Item 3: Questioned stain from suspect's shirt (yellow)

Item 4: Questioned stain from victim's pants (blue)

## Part I: SCREENING TESTS

**Note:** Laboratories submitting their results for ASCLD/LAB or NATA accreditation **MUST** identify any screening tests performed and report the test results.

Indicate the results of any screening tests performed on the questioned stains (Items 3 & 4).

Please use the abbreviations listed in this response key to fill in the Screening Test tables on this tab. This is not an all inclusive list of tests, and should not be used to determine what tests should be performed.

TESTS NOT ON THIS LIST MAY BE USED FOR SCREENING.
