This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack consisted of two known bloodstains on FTA Micro cards (Items 1 & 2), and two questioned stains; one on clean pink fabric (Item 3) and one on clean, off-white fabric (Item 4). Participants were requested to analyze these items using their existing protocols.

SAMPLE PREPARATION: The stains in Items 1, 2, 3, and 4 were prepared using human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. Items 1 (75 µl) and 3 (50 µl) were created using blood from the same male donor. Items 2 (75 µl) and 4 (50 µl) were created using blood from the same male donor. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on September 8, 2020 following receipt of predistribution results.

SAMPLE SET ASSEMBLY: For each sample set, all four Items (1-4) were packed into separate envelopes and then placed together in a pre-labeled sample pack envelope. The sealed sample pack envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

VERIFICATION: All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR loci.

Summary Comments

The 20-5805 DNA-Blood test is part of the DNA Sample Specific Series, where participants are advised of the body fluid(s) that made up the questioned stains. The test is designed to allow participants to assess their proficiency in the analysis of dried stains. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Items 1 and 3 were created using blood from the same male donor. Items 2 and 4 were created using blood collected from the same male donor. (See Manufacturer's Information for preparation details)

Of the 226 participants that returned results, 188 reported DNA interpretations. Twenty-nine participants stated that the samples were only analyzed for database purposes.

For the Item 3 stain, all of the responding participants included the victim (Item 1) as a possible contributor and excluded the suspect (Item 2).

For the Item 4 stain, all participants that reported interpretations excluded the victim (Item 1) as a possible contributor and included the suspect (Item 2).

A total of 34 participants reported the use of Probabilistic Genotyping (PG) software on either solely the questioned items or all four items. No inconsistent results were reported by these participants.

One participant reported allelic responses that differed from the consensus/predistribution results for Items 3 and 4 at the DYS576 locus. Based on the interpretations above, this inconsistency did not appear to affect this participant's conclusions.

Scenario:

Police are investigating the assault of a male victim. The victim was walking home from a football game, when a man he had been arguing with earlier ran up to him and punched him in the face. After a brief scuffle, the suspect ran away. Witnesses were able to identify the suspect and he was arrested the next day. Investigators are submitting a stain from a washcloth (Item 3) found in the suspect's home and the shirt (Item 4) the victim was wearing. Screening has been performed on both samples with the following results: Item 3 (washcloth) and Item 4 (victim's shirt) are both positive for blood. Also collected were known blood samples from the male victim (Item 1) and the male suspect (Item 2).

Items Submitted (Sample Pack S5):

Item 1: Known blood from the male victim

Item 2: Known blood from the male suspect

Item 3: Questioned blood stain from washcloth (pink)

Item 4: Questioned blood stain from victim's shirt (off-white)
