

DNA Parentage Test No. 20-5870 Summary Report

Each participant received a sample pack consisting of the standard paternity trio, collected from a mother, a daughter, and a potential father. Participants were requested to analyze the samples using their existing protocols. Data were returned from 54 participants and are compiled into the following tables:

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample set was a collection of known blood samples, provided on FTA Micro cards, from three individuals (Items 1-3); a mother, a daughter, and a potential father. Participants were requested to analyze these items using their existing protocols. Also included with this test was a kinship exercise that consisted of autosomal DNA profiles of two individuals for comparison. Participants were requested to determine if a sibling relationship claim was supported following the review of these profiles.

SAMPLE PREPARATION: All stains were prepared from human whole blood which was drawn into EDTA tubes. Item 1 (75 µl) was blood from a female (mother) donor, Item 2 (75 µl) was blood from a female (daughter) donor, and Item 3 (75 µl) was blood from a male donor who was the biological father of the Item 2 female. The different items were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on February 18th, 2020.

SAMPLE SET ASSEMBLY: For each sample set, all three Items (1-3) in their separate envelopes were placed in a pre-labeled sample pack envelope and sealed. The sample pack envelopes were then packaged in pre-labeled Heat Seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

KINSHIP EXERCISE: This exercise included allelic results representing a sibling relationship.

VERIFICATION: Laboratories that conducted predistribution analysis of the samples reported consistent results and associations.

Amelogenin and STR Results

Results compiled from predistribution laboratories and a consensus of at least 10 participants.

* Results were not received from a minimum of 10 participants for the loci indicated.

**These ranges are provided to allow participants that utilized databases other than FBI PopStats and NIST STRBASE to review their results. Following AABB guidelines, ranges were determined by taking the grand mean of all data submitted for the associated locus and calculating 3 standard deviations above and below that value.

Summary Comments

The 20-5870 DNA Parentage test was designed to allow participants to assess their proficiency in the analysis and interpretation of a standard paternity trio of blood samples. Item 1 was blood collected from a female donor (mother), Item 2 was blood collected from a female donor (daughter of the Item 1 female), and Item 3 was blood collected from a male donor who is the biological father of the Item 2 female. Participants were requested to analyze the samples and provide allelic and statistical results as well as relationship conclusions. The test also included a paper kinship exercise where participants were requested to evaluate the provided DNA profiles and report the kinship index and relationship conclusions. (Refer to the Manufacturer's Information for preparation details)

DNA Analysis:

All 54 participants who returned data reported consistent STR results for all three items.

Twenty three participants reported full YSTR results for Item 3. All of these participants reported consistent individual profiles for Item 3.

Paternity DNA Statistics:

Fifty three participants reported that the source of Item 3 was not excluded as the biological father of Item 2 and one participant did not report a conclusion. Most participants reported a value of 99.99 or higher for the probability of paternity. The most frequently reported population databases were NIST-STRBASE with 31 participants and FBI PopStats with 19 participants.

Kinship DNA Statistics

There were 29 participants who responded for the paper kinship exercise. In comparison to the consensus values, four participants reported similar inconsistent likelihood ratio results for all of the loci, two of which mentioned in their "Additional Kinship Statistical Results" that they were calculating for half siblings instead of full siblings. All 29 participants reported that the claim of a sibling relationship was supported.

Additional Kinship Statistical Results

TABLE 9

| WebCode | Additional Statistical Results |
|---------|---|
| 79TDMR | In this aptitude test in the exercise of the paternity case, the combined paternity index was calculated considering the complete trio (mother, daughter and alleged father). In the brotherhood exercise, profile A was considered as the brother looking for his brother B. Given the genetic profile of "B", it is 480,867 times more likely that it is the biological brother of "A", than that it is another unsampled and randomly selected individual in the population, and the probability of biological relationship of brotherhood between the genetic profile of A against B is 99.9997%. Due to the policies of this laboratory, in the case of brotherhoods it is suggested to complement the study with more direct relatives such as parents, children or other siblings. |
| 8VLMKK | The scenario does not specify if the claimed relationship is "full vs unrelated" or "half vs unrelated". In this case, the hypothesis tested by our lab is "at least half vs unrelated". This is the outcome: It is very probable that Sibling-A is a half sibling of Sibling-B. AABB RT Standard 5.3.8.2 states that likelihood ratios greater than 10 shall be considered genetic evidence supporting the tested relationship. Probability of half sibship: 99.9907 (50% prior probability). |
| AML3DA | The likelihood ratio for vWA was not included in the second degree relationship (half sibling) kinship index calculation due to possible genetic linkage with D12S391. |
| EF7UWE | PI by Familias3 = 1.40E+06 |
| KG3EAF | *Below is what would be reported based on current laboratory procedures, excluding Penta D and Penta E and using the Expanded FBI STR 2015 population database. AUTOSOMAL STRs: The DNA profile is single source. The kinship index supports the hypothesis that Profile B is the sibling of Profile A using the reference populations listed. The genotype observed for Profile B is "X" times more likely to occur in a sibling of Profile A than in someone unrelated to Profile A from the reference populations listed where "X" equals: African American – 10 Million, Caucasian – 140 Thousand, Hispanic – 2.7 Million |
| KHRPZ9 | AABB requires the report to read: The genetic evidence supports the relationship of sample A and sample B as full siblings. Pu and Linacre have shown at a likelihood ratio >10 that STR test results correctly confirm sibship among known sibling pairs >99% of the time. (Systematic evaluation of sensitivity and specificity of sibship determination by using 15 STR loci. Pu and Linacre. Journal of Forensic and Legal Medicine 15 (2008) 329–334.) |
| LHDGVE | These statistics are based on the expanded FBI database without Penta D and Penta E. AUTOSOMAL STRs: The DNA profile is single source. The kinship index supports the hypothesis that Profile A is the full sibling of Profile B using the reference populations listed. The genotype observed for Profile A is "X" times more likely to occur in a full sibling of Profile B than in someone unrelated to Profile B from the reference populations listed where "X" equals: African American – 10 MILLION, Caucasian – 140 THOUSAND, Hispanic – 2.7 MILLION |
| LU8UTQ | Very strong support. |
| ND8R6H | D12S391 is omitted from the final Kinship (sibling) Index calculation, as per laboratory policy. The Kinship (sibling) Index is rounded to 4 significant figures, as per instructions. |
| PU9367 | % Probability = 99.99967201% for full-sibling |
| UUZFZN | Part III [Table 8: Kinship DNA Statistics]. Kinship stats. The term NA is used as not applicable. This is used with loci where there alleles are not shared between the two tested individuals. |
| XLDN2L | There is a strong evidence to indicate that the subject A and B to be related as full-siblings. The probability of kinship is 99.9998% as calculated based on the NIST STRBASE Caucasian Population Database. |
| ZH3MV6 | D12S391 is omitted from all final calculations, per laboratory policy. SE33 is omitted from the final calculation, as our laboratory does not test this locus. Two significant figures are reported for the CPI, per laboratory policy. Four significant figures are reported for the CSI, per CTS instructions. |

Additional Comments

TABLE 10

| WebCode | Additional Comments |
|---------|--|
| 22DWAB | For part II [Table 5: Paternity DNA Statistics]: The loci Y indel, Amelogenin, DYS391 and D12S391 are not used for Paternity Index calculations in our laboratory. For part III [Table 8: Kinship DNA Statistics]: The loci D12S391, PentaD and PentaE are not used for kinship Index calculations in our laboratory. |
| 34TVXP | NR = No Result |
| 3R3UNA | Our laboratory only reports probability of paternity; therefore, the paternity index will not be listed. The Kinship DNA statistics is not applicable to our laboratory, we do not perform kinship analysis. |
| 6X4QKF | 1) From comparison to the DNA profiles obtained, I found that the source of stained-blood specimen "Item 3" is the biological father to the source of stained-blood specimen "Item 2" [given that the biological mother is represented by the source of stained-blood specimen "Item 1". 2) Extraction: - Item 1, Item 2 and Item 3 were extracted using in-situ method. 3) Amplification: - Item 1, Item 2 and Item 3 were amplified using Globalfiler Express (GFE) on PROFLEX PCR System. - Item 3 were further amplified using AmpF1STR Y-Filer PCR Amplification kit on 9700 GeneAmp PCR System. 4) Electrophoresis: - Electrophoresis was carried out on Genetic Analyzer 3500xL for Item 1, Item 2 and Item 3. (Globalfiler Express) - Electrophoresis was carried out on Genetic Analyzer 3130xL for Item 3 (Yfiler). 5) Quality Control: - Reagent blank, positive control and negative control was incorporated into the overall analysis and gave designated results. 6) The statistical formula was derived from DNAView Statistical Software and calculated using Microsoft Excel. 7) NM : Represent non-male allele. |
| 7VAJF9 | The STR DNA profile detected from the child is consistent with being the STR DNA profile of a biological child of the mother and putative father. The putative father is included as a possible biological father of the child. |
| 8G6MW7 | D12S391 omitted from statistical calculation due to linkage with vWA. Probability of Paternity not calculated at this laboratory. Preferred reporting: The STR DNA profile detected from Child is consistent with being the STR DNA profile of a biological child of Mother and Alleged Father. Alleged Father is included as a possible biological father of Child. |
| 8VLMKK | Kinship Analysis: Reporting the probability of relationship is important as all the kinship tests by an AABB Accredited Lab has to report that value as part of the analysis. |
| 96ATY4 | Note: Due to linkage concerns, our state laboratory does not report out the combined PI value to include both the vWA and D12S391 loci. The more discriminating PI value of these two loci is chosen for calculating the combined PI. |
| AVF87B | 1) From comparison to the DNA profiles obtained, I found that the source of stained-blood specimen "Item 3" is the biological father to the source of stained-blood specimen "Item 2" [given that the biological mother is represented by the source of stained-blood specimen "Item 1". 2) Extraction: - Item 1, Item 2 and Item 3 were extracted using in-situ method. 3) Amplification: - Item 1, Item 2 and Item 3 were amplified using Globalfiler Express (GFE) on PROFLEX PCR System. - Item 3 were further amplified using AmpF1STR Y-Filer PCR Amplification kit on 9700 GeneAmp PCR System. 4) Electrophoresis: - Electrophoresis were carried out on Genetic Analyzer 3500xL for Item 1, Item 2 and Item 3. (Globalfiler Express) - Electrophoresis were carried out on Genetic Analyzer 3130xL for Item 3 (Y-filer). 5) Quality Control: - Reagent blank, positive control and negative control were incorporated in the overall analysis and gave designated results. 6) The statistical formula were derived from DNAView Statistical Software and calculated using Microsoft Excel. 7) NM: Represent non-male allele. |
| CNUUHV | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. The Sibling Index is rounded to 4 significant figures, as per instructions. |
| E4VFXM | Paternity index calculated incorporating theta (point estimate) of 0.02 (Caucasian), 0.05 (Aboriginal) and 0.03 (Asian). In accordance with laboratory protocol, the most conservative Combined Paternity Index is reported, which aligns with the Aboriginal population. Sibship index calculated incorporating IBD alleles of Z0 = 0.25, Z1 = 0.5 and Z2 = 0.25 in accordance with full sibling inheritance. |

TABLE 10

| WebCode | Additional Comments |
|---------|--|
| ETVPEZ | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. The Sibling Index is rounded to 4 significant figures, as per instructions. |
| FVZU6U | D12S391 was not used in the statistic based on laboratory policy. The Combined Paternity Index was truncated to two significant figures based on laboratory policy. |
| GFKZ9A | NR = No Results |
| H9VXMP | D12S391 not used in paternity calculations due to laboratory protocol |
| KG3EAF | AUTOSOMAL STRs: The DNA profile is single source. The alleged father, Subject, cannot be excluded as the potential biological father of the child, Child, Victim using Autosomal STRs. These profiles are "X" times more likely to occur if Child, Victim is the child of Victim, Victim and Subject, Subject than if Child, Victim is the child of Victim, Victim and a random person from the reference populations listed where "X" equals: African American – 3.1 Trillion, Caucasian – 280 Billion, Hispanic – 310 Billion |
| KGNTXT | Preferred wording for Results and Conclusions: The STR DNA profile detected from PT20-5870 Item 2: Known Child (Daughter) is consistent with being the STR DNA profile of a biological child of PT20-5870 Item 1: Known Parent (Caucasian Mother) and PT20-5870 Item 3: Alleged Father (Caucasian). PT20-5870 Item 3: Alleged Father (Caucasian) is included as a possible biological father of PT20-5870 Item 2: Known Child (Daughter). Given that PT20-5870 Item 1: Known Parent (Caucasian Mother) is the biological mother of PT20-5870 Item 2: Known Child (Daughter), it is at least 920 billion times more likely to observe the profile from PT20-5870 Item 2: Known Child (Daughter) if PT20-5870 Item 3: Alleged Father (Caucasian) is her biological father than if a random, unrelated male is the father. |
| LHDGVE | This data was taken from our reporting section for paternity cases. Expanded FBI database was used. AUTOSOMAL STRs: The DNA profile is single source. The alleged father, Subject, cannot be excluded as the potential biological father of the child, Child, Child using Autosomal STRs. These profiles are "X" times more likely to occur if Child, Child is the child of Victim, Victim and Subject, Subject than if Child, Child is the child of Victim, Victim and a random person from the reference populations listed where "X" equals: African American – 3.1 TRILLION, Caucasian – 280 BILLION, Hispanic – 310 BILLION, Y-STRs: The DNA profile is single source. |
| LU8UTQ | In Part I and II [Tables 1-6], the software eDNA Brutus was used with population substructure theta of 0.01. |
| ND8R6H | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. |
| NPLPAL | The laboratory does not calculate probability of paternity. The combined population group was used for statistics. vWA was not included in statistical calculations due to possible linkage issues with D12. |
| RAD6ZJ | 1) On comparison to the DNA profiles obtained, I found the source of stained blood specimen "Item 3" is the biological Father to the source of stained blood specimen "Item 2" (given that the biological mother is represented by the source of stained blood specimen "Item 1". 2) Extraction: - "Item 1", "Item 2" and "Item 3" were extracted using in-situ method. 3) Amplification: - "Item 1", "Item 2" and "Item 3" were amplified using Globalfiler Express (GFE) on PROFLEX PCR System. - "Item 3" was further amplified using AmpFISTR Y-Filer PCR Amplification kit on GeneAmp PCR System 9700. 4) Electrophoresis: - Electrophoresis was carried out on Genetic Analyzer 3500xL for "Item 1", "Item 2" and "Item 3" (Globalfiler Express). - Electrophoresis was carried out on Genetic Analyzer 3130xL for "Item 3" (Y-filer). 5) Quality Control: - Reagent blank, positive control and negative control were incorporated in the overall analysis and gave designated results. 6) The statistical formula was derived from DNAView Statistical Software and calculated using Microsoft Excel. 7) NM - Non Male |

TABLE 10

| WebCode | Additional Comments |
|---------|--|
| T3VY2R | 1) On comparison to the DNA profiles obtained, I found that the source of stained-blood specimen "Item 3" is the biological father to the source of stained-blood specimen "Item 2" [given that the biological mother is represented by the source of stained-blood specimen "Item 1". 2) Extraction: -Item 1, Item 2 and Item 3 were extracted using in-situ method. 3) Amplification: -Item 1, Item 2 and Item 3 were amplified using Globalfiler Express (GFE)on PROFLEX PCR System. -Item 3 was further amplified using AmpFISTR Y-Filer PCR Amplification kit on GeneAmp PCR System 9700. 4)Electrophoresis: -Electrophoresis were carried out on Genetic Analyzer 3500xl for Item 1, Item 2 and Item 3 (Globalfiler Express). -Electrophoresis were carried out on Genetic Analyzer 3130xl for Item 3 (Y-filer). 5)Quality Control: -Reagent blank, positive control and negative control were incorporated in the overall analysis and gave designated results. 6)The statistical formula were derived from DNAView Statistical Software and calculated using Microsoft Excel. 7) NM: represent non-male allele. |
| TE7Q7C | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. The Sibling Index is rounded to 4 significant figures, as per instructions. |
| TJXVYG | Locus parentage indexes were rounded to two decimal places. Combined PI was truncated to two significant figures. D12 was not used to calculate the statistic per laboratory policy. |
| WVQ27K | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. The Sibling Index is rounded to 4 significant figures, as per instructions. |
| WZWY9W | NR = No Results |
| XLDN2L | Amplification: Item 1, Item 2 and Item 3 were amplified using the AmpFLSTR Identifiler Direct PCR Amplification Kit on Applied Biosystems GeneAmp PCR System 9700. With in-situ method, Item 3 was also amplified using the AmpFLSTR Yfiler PCR Amplification kit on Applied Biosystems GeneAmp PCR System 9700. Electrophoresis: Electrophoresis was carried out on the Applied Biosystems 3500XL Genetic Analyzer and the data were analysed with GeneMapper ID-X v1.5 software. Quality control: Reagent Blank, Positive Control and Negative Control were included throughout the analysis and all gave intended results. Statistical evaluation: The statistical formulas were derived from the DNAView Statistical Software and the paternity / kinship index was calculated using the Microsoft Office Excel. On comparison to the DNA profiles obtained, I found the donor of bloodstained specimen "Item 3" to be the biological father to the donor of bloodstained specimen "Item 2". (Given that the biological mother is represented by the donor of bloodstained specimen "Item 1"). |
| ZTK3Y8 | D12S391 is omitted from all final calculations, as per laboratory policy. The CPI is truncated to 2 significant figures, as per laboratory policy. The Sibling Index is rounded to 4 significant figures, as per instructions. |

(Appendix may follow)

Collaborative Testing Services ~ Forensic Testing Program

Test No. 20-5870: DNA Parentage

DATA MUST BE SUBMITTED BY **May 18, 2020, 11:59 p.m.** TO BE INCLUDED IN THE REPORT

Participant Code: U1234A

WebCode: GEPDUL

The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

Scenario:

A standard paternity trio case has been presented to your laboratory. Blood standards have been collected from the mother, daughter, and alleged father. Your laboratory is tasked with examining the blood standards and comparing the DNA profiles.

Items Submitted (Sample Pack DNP1):

Item 1: Blood Sample from Known Parent (Caucasian Mother)

Item 2: Blood Sample from Known Child (Daughter)

Item 3: Blood Sample from Alleged Father (Caucasian)

DNA REPORTING INSTRUCTIONS

Use the instructions below to complete the following DNA Analysis sections of this data sheet

- Report alleles in numerical order, separated by a comma.
- Follow your laboratory procedures for reporting homozygotes (i.e. "14,14", "14,-", "14") and null responses
- PI = Paternity Index
- If your laboratory does not produce PI calculations, record your explanation within the Part IV: Additional comments section.

| Example | D1S1656 | D2S1338 | D2S441 | D3S1358 | D5S818 |
|---------|---------|---------|--------|---------|--------|
| STR | 15,18 | 12,17 | 10 | 14 | 5,13 |
| PI | 1.65 | 3.01 | 3.16 | 4.12 | 5.65 |

Part I: DNA Analysis for Item 1**STR Amplification Kit(s) Used:**

Please check all the brands that apply for this item and record only additional kit specific information in the blank provided (i.e. 16, Plus, Direct, HS, Fusion, etc.).

Alleles below are sorted in Default order.

Part I (continued): DNA Analysis - Additional DNA

- Use this section to report results for loci not currently listed in other sections of the data sheet.
- Report alleles in numerical order, separated by a comma.
- Click "Add Row" to show another row of boxes for entry.

| Locus | Item 1 | Item 2 | Item 3 Alleles | Item 3 PI |
|-------|--------|--------|----------------|-----------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Part II: PATERNITY DNA STATISTICS

Please utilize your own lab protocols regarding ethnicity and choose one of the following population databases for all statistical calculations in this test:

1. **FBI Popstats:** If FBI Popstats is already available in your laboratory then you may select that option, otherwise use the population database below.
2. **NIST-STRBASE** is a publicly available U.S. population dataset at STRBASE on the following NIST web site:
<http://www.cstl.nist.gov/strbase/NISTpop.htm#Autosomal>
 - a. On the NIST web site, access the population database by selecting the hyperlink labeled "Allele frequencies from autosomal STRs as Excel file" under the title "NIST 1036 U.S. Population Dataset".
3. If you are unable to use one of the suggested population databases, report the population database used in the blank provided next to the 'Other Pop. Database' option. Due to the tendency for allele frequencies to vary amongst different databases, no consensus value will be determined for this option. When reporting a population database name, please refrain from using terms that would allude to a laboratory specific name or location; general terms such as 'local/state database' or 'laboratory specific database' are preferred.
4. If you did not calculate paternity statistics, please provide an explanation in your additional comments.

1. Choose a Population Database:

FBI Popstats Pop. Database:

NIST STRBASE Pop. Database:

Other Pop. Database:

2. Record the Combined Paternity Index value:

3. Record the Probability of Paternity:

4. Based on DNA results, select your response from the following options. If the wording differs from the normal wording in your reports, adapt these conclusions as best as you can and use your preferred wording in your additional comments.

- The Alleged parent (Item 3) could not be excluded as the biological parent of child (Item 2).
- The Alleged parent (Item 3) is excluded as a possible biological parent of child (Item 2).
- Inconclusive as to whether the Alleged parent (Item 3) could be the biological parent of child (Item 2). (Please document the reason in the Additional Comments section of this data sheet.)

Part III: KINSHIP DNA STATISTICS

Complete the following Kinship DNA Statistics section, if applicable to your laboratory, using the instructions below.

- Use the provided scenario for context.
- Use the supplied allele frequencies for calculations (adopted from the NIST STRBASE database).
- Only test the relationship in question (eg. half siblings versus unrelated).
- Complete the entire table including the formula used in the calculation and the allele legend.
- Report a minimum of four significant figures in your likelihood ratio values.

Example: Questioned Half Sibling Relationship

| Locus | Profile A | Profile B | Allele Frequencies | | Formula Used | Allele Legend | Likelihood Ratio |
|-------|-----------|-----------|--------------------|------------|-------------------|----------------------|------------------|
| FGA | 18, 26 | 18, 26 | 18: 0.0249 | 26: 0.0263 | $(p+q+4pq) / 8pq$ | $p = 18$ $q = 26$ | 10.272 |
| | | | | | | | |
| vWA | 14, 15 | 14, 17 | 14: 0.0928 | 15: 0.1053 | $(1+4p)/8p$ | $p = 14$ | 1.847 |
| | | | 17: 0.1053 | | | | |

Scenario:

The two DNA profiles below are presented as a potential Caucasian sibling relationship. Using the allele frequencies shown for the tested loci, calculate the likelihood ratio for support of the proposed relationship versus being unrelated.

| Locus | A | B | Allele Frequencies | | Formula Used | Allele Legend | Likelihood Ratio |
|---------|---------|---------|--------------------|--------------|--------------|---------------|------------------|
| D1S1656 | 16,16.3 | 16,16.3 | 16: 0.1357 | 16.3: 0.0609 | | | |
| | | | | | | | |
| D2S1338 | 17,26 | 17,20 | 17: 0.1856 | 20: 0.1565 | | | |
| | | | 26: 0.0305 | | | | |
| D2S441 | 14,14 | 13,15 | 13: 0.0291 | 14: 0.2410 | | | |
| | | | 15: 0.0596 | | | | |

1. Evaluate the profiles above and record the kinship index.

2. Is the relationship of Siblings supported by the genetic evidence?

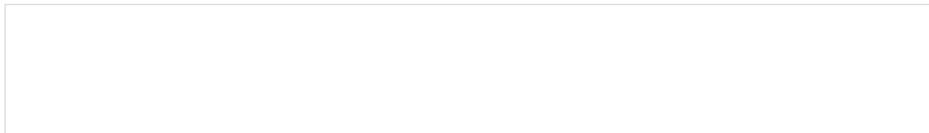

3. Use the space provided to document any additional statistical results and relationship conclusions.

Please note: Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

Part IV: ADDITIONAL COMMENTS

Comments regarding any part of this Test.

Please note: Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section below must be completed.)
 This participant's data is **not** intended for submission to ASCLD/LAB, ANAB, and/or A2LA.

Have the laboratory's designated individual complete the following steps
only if your laboratory is accredited in this testing/calibration discipline
by one or more of the following Accreditation Bodies.

Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory.

ANAB Certificate No.
(Include ASCLD/LAB Certificate here)

A2LA Certificate No.

Step 2: Complete the Laboratory Identifying Information in its entirety.

Authorized Contact Person and Title

Laboratory Name

Location (City/State)
