

## **DNA Interpretation Test No. 21-5882**

### **Summary Report**

Each participant received a sample pack consisting of a digital download packet through the CTS portal containing electropherograms and raw data files which they were requested to evaluate using their existing protocols. Data were returned from 32 participants and are compiled into the following tables:

	<u>Page</u>
<u>Manufacturer's Information</u>	<u>2</u>

<u>Appendix: Data Sheet</u>	

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

---

Each sample pack contained digital files consisting of electropherograms from DNA profiles of two known samples (Items 1 & 2) and two questioned samples (Items 3 & 4). Participants were requested to evaluate the electropherograms and interpret the data using their existing protocols.

**SAMPLE PREPARATION:** Item 1 was created using blood collected from a male donor. Item 2 was created using blood collected from a male donor. The Item 3 mixture was created by combining one part of blood from the Item 1 male donor and three parts of blood from the Item 2 male donor. The Item 4 mixture was created by combining two parts of blood from the Item 2 male donor and one part of blood from a 3rd-party female donor.

**SAMPLE SET ASSEMBLY:** Once sample preparation and verification was completed, the digital upload was checked to ensure all items were accessible.

**VERIFICATION:** Laboratories that conducted predistribution testing of the electropherograms reported consistent results for all loci. All associations were consistent amongst the predistribution laboratories.

Consensus results on the following pages were determined by ensuring at least 10 participants returned results for the locus. Each allele listed was determined by ensuring that at least 75% of participants that returned data for that specific locus and item had reported the same allele.

## Amelogenin and STR Results

Results compiled by predistribution laboratories and a consensus of participants.

## **Summary Comments**

This test was designed to allow participants to assess their proficiency in evaluating electropherograms (EPGs) and interpreting data. Each participant received electropherograms (in HID and PDF formats, as available) of two reference items and two evidence items. The EPG data included were produced from the following amplification kits: GlobalFiler™, Investigator® 24plex, PowerPlex® Fusion 5C, PowerPlex® Fusion 6C, YFiler™ Plus, PowerPlex® Y23.

Item 1 was the male victim's reference sample. Item 2 was the male suspect's reference sample. Item 3 was a mixture of samples from two individuals including the male victim and the male suspect (1:3 ratio respectively). Item 4 was a mixture of samples from two individuals including the male suspect and a third-party female donor for whom no reference sample was provided (2:1 ratio respectively).

Consensus results for each item were determined per allele for each locus. Allele determinations were identified by ensuring that at least 10 participants reported results for the locus and that of these participants, 75% of them reported the same allele(s). Results that differed from the consensus were further compared to the participant's reported interpretation guidelines.

### STR Data

Thirty two participants evaluated the provided STR data. The most frequently reported amplification kit utilized was GlobalFiler™. For reference Items 1 and 2, all participants reported data that were concordant with the consensus.

For questioned Item 3, 21 participants attempted the deconvolution of this mixture. A consensus was formed for both major and minor profiles. Consistent results were reported by all but one participant who was missing an allele at D3S1358 for the minor profile. All participants reported results in line with the consensus for the full Item 3 profile (unseparated) except for one participant, who was missing an allele at both D5S818 and D22S1045.

For questioned Item 4, 14 participants attempted the deconvolution of this mixture. A consensus was formed for both major and minor profiles. All participants reported results in line with the consensus for the major profile, minor profile, and the full Item 4 profile (unseparated).

### YSTR Data

Twenty two participants reported YSTR results.

For reference Items 1 and 2, all participants reported allelic responses that were concordant with the consensus.

For questioned Item 3, 15 participants attempted the deconvolution of this mixture. A consensus was formed for both major and minor profiles. All participants reported results in line with the consensus. For the full Item 3 profile (unseparated), all participants reported results that were concordant with the consensus except for one participant who reported inconsistent results at four loci.

For questioned Item 4, only one participant attempted the deconvolution of this mixture. Due to the lack of reported data, no consensus was formed for major and minor profiles. For the full Item 4 profile (unseparated), all participants reported results that were concordant with the consensus.

### Conclusions

For Item 3, 31 participants reported two (or at least two) individuals contributed to the mixture and one participant reported greater than two contributors. When comparing the Item 3 mixture profile with the Item 1 (victim) reference profile, 31 participants reported that the victim was included as a component of the mixture and one reported inconclusive/uninterpretable. When comparing the Item 3 mixture profile with the Item 2 (suspect) reference profile, all 32 participants reported that the suspect was included as a component of the mixture.

For Item 4, 31 participants reported that two (or at least two) individuals contributed to the mixture and one participant reported greater than two contributors. When comparing the Item 4 mixture profile with the Item 1 (victim) reference profile, 30 participants reported that the victim was excluded as a component of the mixture and one reported that the victim was included. When comparing the Item 4 mixture profile with the Item 2 (suspect) reference profile, 31 participants reported that the suspect was included as a component of the mixture. One participant did not provide a response to whether Item 1 or Item 2 was a contributor to the Item 4 mixture.

## Statistical Analysis for Item 3

TABLE 5

WebCode	Item 3 Methods & Results
46BBHC	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> The genetic profile obtained from Item 3 is interpreted as a mixture of DNA from two contributors. Given this genetic profile, assuming Item 1 is a contributor and assuming two contributors, it is 1.9 sextillion times more likely to observe this genetic profile if Item 1 (Victim) and Item 2 (Suspect) are contributors than if Item 1 (victim) and one unknown individual are the contributors.
4VZ9WB	<b>Method(s):</b> Random Match Probability <b>Stats Analysis:</b> Major contributor - 1 in 2.665 octillion for the African American population, 1 in 46.23 septillion for the Caucasian population, 1 in 21.73 octillion for the Hispanic population, and 1 in 15.11 nonillion for the Asian population. Minor contributor - 1 in 2.296 octillion for the African American population, 1 in 6.458 septillion for the Caucasian population, 1 in 39.768 septillion for the Hispanic population, and 1 in 1.082 septillion for the Asian population.
7ZUPMA	<b>Method(s):</b> [Participant did not report a method.] <b>Stats Analysis:</b> Working from the pdf of the electropherogram, it is not possible to perform a thorough evaluation of each locus. As a result it is possible to miss very minor contributions from additional contributors and be incorrect in the possible number of contributors to complex mixture samples. It is also not possible to thoroughly evaluate spikes, pullup, and baseline irregularities which can affect correct allele determinations. I am a forensic consultant that reviews DNA case files submitted to me as evidence. I review the analyst allele calls and evidence to reference sample comparisons so I can understand how the original analyst arrived at their opinions and conclusions. I accept that their population calculations are correct. NSD: No Size Data, INC: Inconclusive, N/A: Not Applicable
8NDLF3	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> Suspect (ITEM 2) is not excluded as the origin of the predominant genetic profile found in ITEM 3. The genetic finding is 99,288,570,505,422,200,000,000,000,000 times more likely, if the DNA found in the predominant profile of ITEM 3 comes from of suspect (ITEM 2) than if it comes from another individual in the reference population.
9TL6CA	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> Item 3 contains DNA mixture of two contributors, victim and suspect. To support our evidence, we have checked if the suspect is included in the mixture, we have conducted LR using LRMix. in HP (prosecution), the likelihood ration of the suspect in the DNA mixture is 5.6950E13 . while in HD (defense), the likelihood ratio of the suspect being another person unknown is 9.908E-13.In this case, the suspect is more likely to be a contributor in the mixture then a random unknown man.
AQRX84	<b>Method(s):</b> Likelihood Ratio, default stat <b>Stats Analysis:</b> The DNA profile (item 3) is 100 billion times more likely if the suspect (item 2) is a contributor to than if another unknown unrelated individual from the [Nationality] population is. Y STR: The Y STR DNA profile is 153 times more likely if the suspect is a contributor than if another unknown male from the [Nationality] population is.
B8QBF6	<b>Method(s):</b> Likelihood Ratio
CGXCEB	<b>Method(s):</b> Likelihood Ratio, Counting Method for YSTRs <b>Stats Analysis:</b> AUTOSOMAL INTERPRETATIONS: Analyses are based on Likelihood Ratio analysis. Under the assumption that the VICTIM (Item 1) and one unrelated person selected at random from the general population are contributors to this mixture, the likelihood of observing this mixed source profile is $\geq 1,000,000$ times greater (actual LR available upon request) than if it is assumed that two unrelated persons selected at random from the general population are contributors to this mixed-source sample. Under the assumption that the SUSPECT (Item 2) and one unrelated person selected at random from the general population are contributors to this mixture, the likelihood of observing this mixed source profile is $\geq 1,000,000$ times greater (actual LR available upon request) than if it is assumed that two unrelated persons selected at random from the general population are contributors to this mixed-source sample. YSTR INTERPRETATIONS: Analyses are based on the counting method. VICTIM (Item 1) is

TABLE 5

WebCode	Item 3 Methods & Results
<p>excluded as the potential MAJOR CONTRIBUTOR to the mixed YSTR profile developed from Item 3. SUSPECT (Item 2), his paternally-related male relatives, and an unknown number of males in the general population cannot be excluded as the potential MAJOR CONTRIBUTOR to the mixed YSTR profile developed from Item 3. Statistical Interpretation: On 5 December 2021, the DNA profile was searched against the U.S. Y-STR national database component of the Y-Chromosome Haplotype Reference Database (YHRD). This Y-STR DNA profile was observed: U.S. Caucasians: 0 times in a database of 2,645 Caucasian males (95% UCI: approx. 1 in 883 Caucasian males), U.S. African-Americans: 0 times in a database of 2,489 African-American males (95% UCI: approx. 1 in 831 African-American males), U.S. Hispanics: 0 times in a database of 2,322 Hispanic males (95% UCI: approx. 1 in 776 Hispanic males)</p>	
DJFQKW	<p><b>Method(s):</b> Likelihood Ratio</p> <p><b>Stats Analysis:</b> The evidence is 84 sextillion times more likely if the Victim is a contributor to the DNA mixture than if he is not a contributor. This is very strong support for inclusion. The evidence is 56 septillion times more likely if the Suspect is a contributor to the DNA mixture than if he is not a contributor. This is very strong support for inclusion.</p>
DVA89X	<p><b>Method(s):</b> Likelihood Ratio</p> <p><b>Stats Analysis:</b> Overall Likelihood Ratio= 2,48700 E042</p>
EBL6R4	<p><b>Method(s):</b> Likelihood Ratio</p> <p><b>Stats Analysis:</b> The mixed DNA profile are 100 septillion, 1.7 octillion and 14 septillion TIMES more likely; IF they originated from "Item 2" and "Item 1" RATHER THAN; IF they originated from "Item 1" and one unknown unrelated individual as calculated based on the [Location-identifying population databases].</p>
EBYURU	<p><b>Method(s):</b> Random Match Probability</p> <p><b>Stats Analysis:</b> The frequency of occurrence of an unrelated individual in a random population having the same genetic profile as the major DNA profile obtained from Item 3 (DNA profile found from the stain on the right sleeve of the victim's sweatshirt) is approximately: 1 in 10.6 octillion (<math>1.06 \times 10^{28}</math>) African Americans, 1 in 65.3 octillion (<math>6.53 \times 10^{28}</math>) Caucasians, and 1 in 350 octillion (<math>3.50 \times 10^{29}</math>) Southwestern Hispanics.</p>
EEY7NU	<p><b>Method(s):</b> Random Match Probability</p> <p><b>Stats Analysis:</b> The DNA profile found from the stain on the right sleeve of the victim's sweatshirt (Item 3) was a mixture from at least two sources with one of them being predominant. The major source could have been the suspect (Item 2), while the DNA types in the mixture not attributable to the major source could be accounted for by those of the victim (Item 1). The RMP for the major source is about 5.50E+28.</p>
GNYCGZ	<p><b>Method(s):</b> Likelihood Ratio</p> <p><b>Stats Analysis:</b> The mixed DNA profile are 100 septillion (<math>100 \times 10^{24}</math>), 1.7 octillion (<math>1.7 \times 10^{27}</math>) and 18 septillion (<math>18 \times 10^{24}</math>) TIMES more likely; if they originated from reference samples "Item 1" (Male Victim – Caucasian) and "Item 2" (Male Suspect – Caucasian) RATHER THAN; if they originated from reference samples "Item 1" (Male Victim – Caucasian) and one unknown unrelated individual as calculated based on [Location-identifying population databases].</p>
KBGYRU	<p><b>Method(s):</b> Random Match Probability</p> <p><b>Stats Analysis:</b> En los cuadrantes que presentan una linea diagonal (/) con otros alelos son las otras posibles combinaciones probables para ese marcador. [English translation was not obtained by the time of report publication.]</p>
LQCGGT	<p><b>Method(s):</b> Likelihood Ratio</p> <p><b>Stats Analysis:</b> Item 1 + 1 unkn / 2 unkn, LR: LRMix Studio = 1.8E+15, LabRetriever = 8.9E+14, EFM = 3.4E+19, DNAView = 5.0E+23 Item 2 + 1 unkn / 2 unkn, LR: LRMix Studio = 9.0E+14, LabRetriever = 6.4E+14, EFM = 1.1E+31, DNAView = 8.0E+31</p>
MAJ78V	<p><b>Method(s):</b> Random Match Probability</p>

TABLE 5

WebCode	Item 3 Methods & Results
<b>Stats Analysis:</b> A mixed DNA profile (PowerPlex Fusion 5C) consisting of DNA from at least two contributors was obtained from the stain on the right sleeve of the victim's shirt; item CTS-21-5882-3. A major male contributor and a minor male contributor were obtained from CTS-21-5882-3 at all loci. The DNA profile for the major contributor of CTS-21-5882-3 is consistent with the DNA profile of CTS-21-5882-2. Therefore, the individual represented by the reference sample, item CTS-21-5882-2 (suspect), can not be excluded as a contributor to the DNA profile obtained from the stain on the right sleeve of the victim's shirt, item CTS-21-5882-3. A probability of selecting a random unrelated individual having a DNA profile identical to CTS-21-5882-2 at the loci observed is 1 in 1.69E+31 for African Americans, 1 in 4.58E+30 for Caucasian Americans, 1 in 3.88E+31 for Hispanic Americans and 1 in 1.02E+35 for Asian Americans. The DNA profile for the minor contributor of CTS-21-5882-3 is consistent with the DNA profile of CTS-21-5882-1. Therefore, the individual represented by the reference sample, item CTS-21-5882-1 (victim), can not be excluded as a contributor to the DNA profile obtained from the stain found on the right sleeve of the victim's shirt, item CTS-21-5882-3. A mixed DNA profile (PowerPlex Y23) consisting of DNA from at least two male contributors was obtained from the stain on the right sleeve of the victim's shirt, item CTS-21-5882-3. A major male contributor and a minor male contributor were obtained from CTS-21-5882-3 at all loci. The DNA profile for the major contributor of CTS-21-5882-3 is consistent with the DNA profile of CTS-21-5882-2 (suspect). Therefore, the individual represented by the reference sample, item CTS-21-5882-2 (suspect), can not be excluded as a contributor to the YSTR DNA profile obtained from item CTS-21-5882-3, the stain found on the right sleeve of the victim's shirt. The selected haplotype is found 0 times out of 98,565 total haplotypes within the database. Applying 95% upper confidence interval results in 1 in 98,566 haplotypes. Number of African American haplotypes: 1253 (.00239 frequency), Number of Asian haplotypes: 644 (.00464 frequency), Number of Caucasian haplotypes: 1144 (.00262 frequency), Number of Hispanic haplotypes: 917 (.00326 frequency) Number of Native American Haplotypes: 880 (.00340 frequency). The DNA profile for the minor contributor of CTS-21-5882-3 is consistent with the DNA profile of CTS-21-5882-1 (victim). Therefore, the individual represented by CTS-21-5882-1 can not be excluded as a contributor of the YSTR DNA profile obtained from the stain on the right sleeve of the victim's shirt, item CTS-21-5882-3.	
MBDUPQ	<b>Method(s):</b> Likelihood Ratio  <b>Stats Analysis:</b> Likelihood Ratio: The evidence is at least 100 billion times more likely if the victim (Item 1) is one of two contributors to the DNA profile obtained than if the DNA profile originated from two unknown individuals, unrelated to the victim (Item 1), selected at random from the [Nationality] Caucasian Sub-Population. Conclusion: In my opinion, this finding when considered in isolation from other information provides extremely strong support for the proposition that the victim (Item 1) is a contributor to the DNA profile. Likelihood Ratio: The evidence is at least 100 billion times more likely if the suspect (Item 2) is one of two contributors to the DNA profile obtained than if the DNA profile originated from two unknown individuals, unrelated to the suspect (Item 2), selected at random from the [Nationality] Caucasian Sub-Population. Conclusion: In my opinion, this finding when considered in isolation from other information provides extremely strong support for the proposition that the suspect (Item 2) is a contributor to the DNA profile.
N944ZM	<b>Method(s):</b> Likelihood Ratio
PFJ4VP	<b>Method(s):</b> Likelihood Ratio  <b>Stats Analysis:</b> LR Analysis Summary (Theta = 0.01): 1. Item-3 vs Item 1 Victim's DNA not excluded from mixture DNA. Alleles of victim DNA profile found in mixture of 21-00820.01G (Item_3). Hypothesis: Hp = mixture of 21-00822.01G (Item_1 - victim) and one unknown unrelated person; Hd = mixture of two unknown unrelated people. Results: A) GeneMapper IDX Mixture Analysis Tab: LR = 4.7639E20 ([Location-identifying] population), LR = 1.4585E20 ([Location-identifying] population). B) LRMix Studio v.1.2.3 (Drop out probability: 0.09): LR = 5.97210E13 ([Location-identifying] population), LR = 1.70868E13 ([Location-identifying] population). 2. Item-3 vs Item 2: Major contributor genotype compatible with suspect genotype. Hypothesis: Hp = contributor: 21-00823.01G (Item_2 - suspect) (major contributor), Hd = contributor: unknown unrelated person. Results: A) GeneMapper IDX Mixture Analysis Tab: LR = 2.7524E30 ([Location-identifying] population) LR = 6.7071E29 ([Location-identifying] population). B) LRMix Studio v.1.2.3 (Drop out probability: 0) LR = 1.07562E29 ([Location-identifying] population), LR = 3.75503E28 ([Location-identifying] population)

TABLE 5

WebCode	Item 3 Methods & Results
PJX4PW	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> LR = 7,14*e+21
PMWFLV	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> The DNA profile from item 3 is 1 billion times more likely if it resulted from a contribution from the victim (Item 1) and suspect (Item 2) than if it resulted from contribution from two unknown unrelated individuals.
Q432NH	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> DNA typing results were detected for Item 3. The DNA typing results detected in Item 3 are consistent with a mixture of DNA from Item 2 as the major contributor with a smaller amount of DNA from Item 1. The probability of seeing this DNA mixture is 7.75 nonillion (7.75E30) times more likely if it originated from Item 2 and Item 1 than if it originated from Item 1 and an unknown contributor. Item 1 is expected to be present in the mixture and is assumed to be a contributor. This analysis provides very strong support for the proposition that Item 1 and Item 2 are contributors to the DNA obtained from Item 3.
TFMX3L	<b>Method(s):</b> Counting Method <b>Stats Analysis:</b> * Note for item #3: 16(a) at D19 in GF but not 6C. ^ Note for item #3: 17(a) at DYS590 in YFP but not PPY23. Probabilistic Genotyping Analysis for all autosomal DNA profiles. Outsourcing of PG performed upon request.
UQKK8M	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> LR=8,6428E035 Hp (victim+suspect) vs. Hd (2 unknown)
UUJW4M	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> Item 1 - Victim LR = 3.022e+19. Item 2- Suspect LR = 4.226e+28.
WGQUZL	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> The mixed DNA profile are 100 septillion, 1.7 octillion and 14 septillion TIMES more likely; IF they originated from "Item 2" and "Item 1" RATHER THAN; IF they originated from "Item 1" and one unknown unrelated individual as calculated based on the [Location-identifying population databases].
ZGWF2J	<b>Method(s):</b> Likelihood Ratio <b>Stats Analysis:</b> The mixed DNA profile are 100 septillion ( $100 \times 10^{24}$ ), 1.7 octillion ( $1.7 \times 10^{27}$ ) and 18 septillion ( $18 \times 10^{24}$ ) TIMES more likely; IF they originated from the male victim (Item 1) and male suspect (Item 2) RATHER THAN; IF they originated from the male victim (Item 1) and one unknown unrelated individual as calculated based on the [Location-identifying population databases].

# **Statistical Analysis for Item 4**

TABLE 6

WebCode	Item 4 Methods & Results
46BBHC	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> The genetic profile obtained from Item 4 is interpreted as a mixture of DNA from two contributors. Item 2 (suspect) cannot be excluded as a possible contributor to this mixture. Given this genetic profile, assuming two contributors, it is 2.1 trillion times more likely to observe this genetic profile if Item 2 (suspect) and one unknown individual are contributors than if 2 unknown individuals are the contributors.</p>
4VZ9WB	<b>Method(s):</b> Random Match Probability <p><b>Stats Analysis:</b> Major contributor - 1 in 2.665 octillions for the African American population, 1 in 46.23 septillions for the Caucasian population, 1 in 21.73 octillions for the Hispanic population, and 1 in 15.11 nonillions for the Asian population.</p>
7ZUPMA	<b>Method(s):</b> [Participant did not report a method.] <p><b>Stats Analysis:</b> Working from the pdf of the electropherogram, it is not possible to perform a thorough evaluation of each locus. As a result it is possible to miss very minor contributions from additional contributors and be incorrect in the possible number of contributors to complex mixture samples. It is also not possible to thoroughly evaluate spikes, pullup, and baseline irregularities which can affect correct allele determinations. I am a forensic consultant that reviews DNA case files submitted to me as evidence. I review the analyst allele calls and evidence to reference sample comparisons so I can understand how the original analyst arrived at their opinions and conclusions. I accept that their population calculations are correct. NSD: No Size Data, INC: Inconclusive, N/A: Not Applicable</p>
8NDLF3	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> Suspect (ITEM 2) and at least one unknown individual are not excluded as contributors to the mixture of cells found in ITEM 4. The finding is 32,364,812,323,574,100,000 times more likely, if the mixture comes from the suspect (ITEM 2) and at least one unknown individual, to come from at least two unknown individuals taken at random in the reference population.</p>
9TL6CA	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> Item 4 contains DNA mixture of two contributors, suspect and unknown female. To support our evidence, we have checked if the suspect is included in the mixture, we have conducted LR using LRMix. in HP (prosecution), the likelihood ratio of the suspect in the DNA mixture is 7.4329E9. while in HD (defense), the likelihood ratio of the suspect being another person unknown is 4.8796E-24. In this case, the suspect is more likely to be a contributor in the mixture than a random unknown man.</p>
AQRX84	<b>Method(s):</b> Likelihood Ratio, default statistic <p><b>Stats Analysis:</b> The DNA profile (item 4) is 100 billion times more likely if the suspect (item 2) is a contributor than if another unrelated individual from the [Nationality] population is. Y STR: The Y-STR DNA profile (item 4) is 153 times more likely if the suspect (item 2) is a contributor than another male in the [Nationality] population is.</p>
B8QBF6	<b>Method(s):</b> Likelihood Ratio
CGXCEB	<b>Method(s):</b> Likelihood Ratio, Counting Method for YSTRs <p><b>Stats Analysis:</b> AUTOSOMAL INTERPRETATIONS: Analyses are based on Likelihood Ratio analysis. Under the assumption that two unrelated persons selected at random from the general population are contributors to this mixture, the likelihood of observing this mixed source profile is <math>\geq 1,000,000</math> times greater (actual LR available upon request) than if it is assumed that the Victim (Item 1) and one unrelated person selected at random from the general population are contributors to this mixed-source sample. Under the assumption that the SUSPECT (Item 2) and one unrelated person selected at random from the general population are contributors to this mixture, the likelihood of observing this mixed source profile is <math>\geq 1,000,000</math> times greater (actual LR available upon request) than if it is assumed that two unrelated persons selected at random from the general population are contributors to this</p>

TABLE 6

WebCode	Item 4 Methods & Results
<p>mixed-source sample. YSTR INTERPRETATIONS: Analyses are based on the counting method. VICTIM (Item 1) is excluded as the potential CONTRIBUTOR to the YSTR profile developed from Item 4. SUSPECT (Item 2), his paternally-related male relatives, and an unknown number of males in the general population cannot be excluded as a potential CONTRIBUTOR to the YSTR profile developed from Item 4. Statistical Interpretation: On 5 December 2021, the DNA profile was searched against the U.S. Y-STR national database component of the Y-Chromosome Haplotype Reference Database (YHRD). This Y-STR DNA profile was observed: U.S. Caucasians: 0 times in a database of 2,645 Caucasian males (95% UCI: approx. 1 in 883 Caucasian males), U.S. African-Americans: 0 times in a database of 2,489 African-American males (95% UCI: approx. 1 in 831 African-American males), U.S. Hispanics: 0 times in a database of 2,322 Hispanic males (95% UCI: approx. 1 in 776 Hispanic males)</p>	
DJFQKW	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> The evidence is 48 septillion times more likely if the Suspect is a contributor to the DNA mixture than if he is not a contributor. This is very strong support for inclusion. The Victim is excluded as a contributor to this mixture.</p>
DVA89X	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> Overall Likelihood Ratio = 3,23648E019</p>
EBL6R4	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> The mixed DNA profile are 1.9 quintillion, 32 quintillion and 280 quadrillion TIMES more likely; IF they originated from "Item 2" and one unknown individual RATHER THAN; IF they originated from two unknown unrelated individual as calculated based on the [Location-identifying population databases].</p>
EEY7NU	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> The DNA profile found from the stain on the sidewalk (Item 4) was a mixture from at least two sources. The victim (Item 1) could be excluded as a possible source of this mixture. The suspect (Item 2) could be included as one of the possible sources of this mixture. The LR value calculated for the possible involvement of the suspect (Item 2) to this DNA mixture was about 2.08E+28 to one, which means it is about 2.08E+28 times more likely that the observed DNA profile being a mixture originating from the suspect (Item 2) and an unrelated individual than if it originating from two unrelated individuals selected at random from the Caucasian population.</p>
GNYCGZ	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> The mixed DNA profile are 1.9 quintillion (<math>1.9 \times 10^{18}</math>), 32 quintillion (<math>32 \times 10^{18}</math>) and 370 quadrillion (<math>370 \times 10^{15}</math>) TIMES more likely; if they originated from reference sample "Item 2" (Male Suspect – Caucasian) and one unknown individual RATHER THAN; if they originated from two unknown unrelated individuals as calculated based on [Location-identifying population databases].</p>
KBGYRU	<b>Method(s):</b> Random Match Probability <p><b>Stats Analysis:</b> En los cuadrantes que presentan una linea diagonal (/) con otros alelos son las otras posibles combinaciones probables para ese marcador. [English translation was not obtained by the time of report publication.]</p>
LQCGGT	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> Item 1 + 1 unkn / 2 unkn, LR: LRMix Studio = 9.0E-62, LabRetriever = 6.3E-71, EFM = 7.3E-32, DNAView = 1.0E-32. Item 2 + 1 unkn / 2 unkn, LR: LRMix Studio = 1.1E+16, LabRetriever = 9.1E+15, EFM = 9.9E+30, DNAView = 1.0E+32</p>
MAJ78V	<b>Method(s):</b> Random Match Probability <p><b>Stats Analysis:</b> A mixed DNA profile (PowerPlex Fusion 5C) consisting of DNA from at least two contributors was obtained from the stain on the sidewalk; item CTS-21-5882-4. A major male contributor and a minor contributor were obtained from CTS-21-5882-4 at all loci. The DNA profile for the major contributor of CTS-21-5882-4 is consistent with the DNA profile of CTS-21-5882-2. Therefore, the individual represented by the reference sample, item CTS-21-5882-2 (suspect), can not</p>

TABLE 6

WebCode	Item 4 Methods & Results
<p>be excluded as a contributor to the DNA profile obtained from the stain on the sidewalk, item CTS-21-5882-4. A probability of selecting a random unrelated individual having a DNA profile identical to CTS-21-5882-2 at the loci observed is 1 in 1.69E+31 for African Americans, 1 in 4.58E+30 for Caucasian Americans, 1 in 3.88E+31 for Hispanic Americans and 1 in 1.02+35 for Asian Americans. The DNA profile for the minor contributor of CTS-21-5882-3 is not consistent with the DNA profile of CTS-21-5882-1. Therefore, the individual represented by the reference sample, item CTS-21-5882-1 (victim), is excluded as a contributor of the DNA profile obtained from the stain found on the sidewalk, item CTS-21-5882-4. A single DNA profile (PowerPlex Y23) was obtained from item CTS-21-5882-4, the stain on the sidewalk. The YSTR DNA profile obtained from the stain on the sidewalk is consistent with the DNA profile of CTS-21-5882-2, the reference sample for the suspect. The selected haplotype is found 0 times out of 98,565 total haplotypes within the database. Applying 95% upper confidence interval results in 1 in 98,566 haplotypes. Number of African American haplotypes: 1253 (.00239 frequency), Number of Asian haplotypes: 644 (.00464 frequency), Number of Caucasian haplotypes: 1144 (.00262 frequency), Number of Hispanic haplotypes: 917 (.00326 frequency) Number of Native American Haplotypes: 880 (.00340 frequency).</p>	
MBDUPQ	<b>Method(s):</b> Likelihood Ratio <p><b>Stats Analysis:</b> Likelihood Ratio: The evidence is at least 100 billion times more likely if the suspect (Item 2) is one of two contributors to the DNA profile obtained than if the DNA profile originated from two unknown individuals, unrelated to the suspect (Item 2), selected at random from the [Nationality] Caucasian Sub-Population. ## **Additional Comments**

TABLE 9

WebCode	Additional Comments
4LYNUH	N/A = Not applicable. () = minor allele. --- = Possible additional allele(s).
4VZ9WB	LR of Item 3 if the profile had originated from Item 1 and Item 2: African American: $3.11 \times 10^{29}$ , Caucasian: $1.63 \times 10^{29}$ , Asian: $7.85 \times 10^{30}$ , Hispanic: $7.72 \times 10^{29}$ (CODIS 13 Budowle 2001 in SoftGenetics GeneMarker Mixture Analysis tool)
8NDLF3	In item 3, a mixture was found between the victim and the suspect, however the calculation was made only with the predominant profile. For item 3 we did not report the D19S433 system, because the results were not reproducible in the different kits analyzed.
ANKHXC	--- = Possible Additional Alleles. () = Minor Allele.
EBL6R4	Data Analysis: 1. The HID data was analyzed with GeneMapper ID-X v1.5 software. 2. YFiler Plus was reviewed using PDF format. 2. Statistical evaluation was performed on DNAVIEW ver 37.56.
EBYURU	Regarding Item 3- Reported comparisons/conclusions are to the Major DNA profile. The suspect matches the major DNA profile and the victim does not match the major DNA profile obtained from Item 3. Major was not called at D18S51 because peak height ratio of possible major peaks was not met. No conclusions could be made regarding the minor component from Item 3 due to insufficient DNA. Regarding Item 4- we require a minimum Peak Amplitude Threshold (PAT) of 200 rfu in the orange dye. Because the PAT for the orange dye for Item 4 was not met, no sizing data was obtained and this item could not be analyzed/interpreted further.
FF9FE7	() = Minor Allele. --- = Possible Additional Alleles. N/A = Not Applicable.
GNYCGZ	Statistical calculation was carried out using DNAVIEW software version 37.56 and calculated at 21 loci.
KBGYRU	En los cuadrantes que presentan una linea diagonal (/) con otros alelos son las otras posibles combinaciones probables para ese marcador. [English translation of comments was not obtained by the time of report publication.]
WGQUZL	Data Analysis: 1. The HID data was analyzed with GeneMapper ID-X v1.5 software. 2. YFiler Plus was reviewed using PDF format. 3. Statistical evaluation was performed on DNA-view ver 37.56.
ZGWF2J	The statistical evaluations were performed on the DNA.VIEW Statistical Software version 37.42.

(Appendix may follow)

**Collaborative Testing Services ~ Forensic Testing Program**

**Test No. 21-5882: DNA Interpretation**

**DATA MUST BE SUBMITTED BY Dec. 6, 2021, 11:59 p.m. TO BE INCLUDED IN THE REPORT**

Participant Code: U1234A

WebCode: 4PX2H9

The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

**Scenario:**

A male individual was reportedly involved in a shooting at an apartment building. The male victim was shot in the left arm during the incident. The shooter was injured when the victim attempted to gain control of the gun. The shooter exited the building after the incident. A tenant of the apartment building called 911 after hearing the gunshots and the male victim was brought to the hospital for treatment. A male suspect matching the description of the victim's attacker was identified and apprehended. The victim's sweatshirt containing reddish brown stains on the right sleeve was collected as evidence. Reddish brown stains were also found on the sidewalk near where the shooter was seen exiting the building. The stains were swabbed and submitted as evidence. The reddish brown stains recovered from the right sleeve of the victim's sweatshirt and from the sidewalk were confirmed as blood by the Serology unit and subsequently submitted for DNA analysis (Item 3 and Item 4, respectively). The DNA unit has completely consumed all evidence and has provided you with the DNA profiles obtained from the items. You are requested to evaluate the DNA profiles using your laboratory-specific guidelines and report your results.

**Items Submitted (Sample Pack INT2):**

Item 1: DNA profile from reference sample (Male Victim - Caucasian)

Item 2: DNA profile from reference sample (Male Suspect - Caucasian)

Item 3: DNA profile found from the stain on the right sleeve of the victim's sweatshirt

Item 4: DNA profile found from the stain on the sidewalk

21-5882 Data for Participants.zip MD5 hash value: a9e4b45974e6e8530ec436eef1c73cc9

21-5882 Data for Participants.zip SHA1 hash value: 2dae84fddefe353dcaa680590fad3540bf1ec68f

**Part I: DNA ANALYSIS INSTRUCTIONS**

- Use your laboratory's Interpretation guidelines for evaluation of this test.
- Please report Laboratory Specific Interpretation Guidelines below per amplification kit.
- If interpretation guidelines are not reported, the consensus information will be utilized in the review of results.

Analytical Threshold:

Peak Height Ratio (%):

Stochastic Threshold (Peak Amplitude):

**If you do not have Interpretation guidelines, please use the following guidelines and report these values above:**

For STR Analysis: Analytical Threshold: 75 rfu, Peak Height Ratio: 60%, Stochastic Threshold (Peak Amplitude): 100 rfu

For YSTR Analysis: Analytical Threshold: 75 rfu, Peak Height Ratio: 50%, Stochastic Threshold (Peak Amplitude): 75 rfu

- Report the allelic results for each Item in the appropriate response boxes.
- If major and minor contributor(s) can be distinguished and your laboratory normally reports this distinction, report the results of the major profile and the minor profile in the appropriately labeled boxes; otherwise, list the alleles in numerical order in the remaining row of boxes labeled with the Item number.
- Please Note: Samples were completely consumed during extraction.

## Part I: DNA ANALYSIS

## STR & Amelogenin Results for Known Item 1

- Report alleles in numerical order, separated by a comma.
  - Follow your laboratory procedures for reporting homozygotes (i.e. X,X or X) and null responses.

**STR Amplification Kit Used For Item 1:**

Please indicate the electropherogram(s) reviewed for this test.

**Part I: DNA ANALYSIS (continued)**

**Item 3 DNA Analysis Questions**

1) Record the number of contributors found in the Item 3 DNA profile:

2) Choose the conclusion statement that best describes the results of the analysis for Item 3 based on comparisons with the Known Items (If the wording below differs from the normal wording of your conclusions, adapt these conclusions as best you can and use your preferred wording in the Additional Comments section.):

**Item 1 Conclusion**

- Item 1 (victim) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 3.
- Item 1 (victim) is excluded as a possible contributor to the DNA obtained from Item 3.
- The DNA typing results for Item 3 in comparison with Item 1 are inconclusive/uninterpretable.

**Item 2 Conclusion**

- Item 2 (suspect) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 3.
- Item 2 (suspect) is excluded as a possible contributor to the DNA obtained from Item 3.
- The DNA typing results for Item 3 in comparison with Item 2 are inconclusive/uninterpretable.

3) **Statistical Analysis of Item 3 DNA Typing Results:**

Select the statistical method(s) used by marking the associated box and report these results in the space below:

Combined Probability of Exclusion/Inclusions (CPE/CPI)

Likelihood Ratio (LR)

Random Match Probability (RMP)

Other:

**Please note:** Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

4) Please list any databases used in the statistical analyses of Item 3 below.

## Part I: DNA ANALYSIS (continued)

## **STR & Amelogenin Results for Questioned Item 4**

- Report alleles in numerical order, separated by a comma.
  - Follow your laboratory procedures for reporting homozygotes (i.e. X,X or X) and null responses.
  - For each locus, if a major and minor contributor can be distinguished and your laboratory normally reports this distinction, record the results in the appropriately labeled response boxes.

**Please note:** Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

4) Please list any databases used in the statistical analyses of Item 4 below.

**Part II: ADDITIONAL COMMENTS**

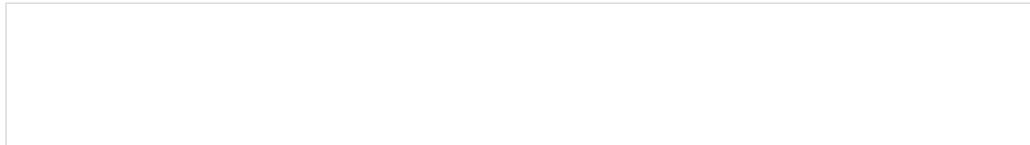

Comments regarding any part of this Test.

**Please note:** Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

**Part III: AMPLIFICATION KIT SURVEY (optional)**

To accommodate your laboratory's future needs, please list all PCR amplification kits (Autosomal and YSTR) utilized as well as any future kits to be implemented in your laboratory.

## RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section below must be completed.)
- This participant's data is **not** intended for submission to ASCLD/LAB, ANAB, and/or A2LA.

Have the laboratory's designated individual complete the following steps  
**only if your laboratory is accredited in this testing/calibration discipline**  
by one or more of the following Accreditation Bodies.

**Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory**

ANAB Certificate No.  
(Include ASCLD/LAB Certificate here)

A2LA Certificate No.

**Step 2: Complete the Laboratory Identifying Information in its entirety**

Authorized Contact Person and Title

Laboratory Name

Location (City/State)
