## DNA Interpretation Test No. 22-5881 Summary Report

Each participant received a sample pack consisting of a digital download packet through the CTS portal containing electropherograms and raw data files which they were requested to evaluate using their existing protocols. Data were returned from 30 participants and are compiled into the following tables:

## Manufacturer's Information

Each sample pack contained digital files consisting of electropherograms from DNA profiles of two known samples (Items 1 \& 2) and two questioned samples (Items 3 \& 4). Participants were requested to evaluate the electropherograms and interpret the data using their existing protocols.

SAMPLE PREPARATION: Item 1 was created using blood collected from a female donor. Item 2 was created using blood collected from a male donor. The Item 3 mixture was created by combining two parts of blood from the Item 1 female donor and one part of blood from a 3rd party male donor. The Item 4 mixture was created by combining five parts of blood from the Item 1 female donor, three parts of blood from the Item 2 male donor, and two parts of blood from the same 3rd-party male donor used in the Item 3 mixture.

SAMPLE SET ASSEMBLY: Once sample preparation and verification was completed, the digital upload was checked to ensure all items were accessible.

VERIFICATION: Laboratories that conducted predistribution testing of the electropherograms reported consistent results for all loci. All associations were consistent amongst the predistribution laboratories.

Consensus results on the following pages were determined by ensuring at least 10 participants returned results for the locus. Each allele listed was determined by ensuring that at least $75 \%$ of participants that returned data for that specific locus and item had reported the same allele.

Amelogenin and STR Results
Results compiled by predistribution laboratories and a consensus of participants.

## Summary Comments

This test was designed to allow participants to assess their proficiency in evaluating electropherograms (EPGs) and interpreting data. Each participant received electropherograms (in HID and PDF formats, as available) of two reference items and two evidence items. The EPG data included were produced from the following amplification kits: GlobalFiler ${ }^{T M}$, Investigator ${ }^{\circledR} 24$ plex, PowerPlex ${ }^{\circledR}$ Fusion 5C, PowerPlex ${ }^{\circledR}$ Fusion 6C, Identifiler ${ }^{\text {TM }}$ Plus, YFiler ${ }^{\text {™ }}$ Plus, PowerPlex ${ }^{\circledR}$ Y23.

Item 1 was the female victim's reference sample. Item 2 was the male suspect's reference sample. Item 3 was a mixture of samples from two individuals including the female victim and a 3rd party male contributor for whom no reference sample was provided ( $2: 1$ ratio respectively). Item 4 was a mixture of samples from three individuals including the female victim, the male suspect, and the same 3rd party male contributor used in Item 3 (5:3:2 ratio respectively).

Consensus results for each item were determined per allele for each locus. Allele determinations were identified by ensuring that at least 10 participants reported results for the locus and that of these participants, $75 \%$ of them reported the same allele(s). Results that differed from the consensus were further compared to the participant's reported interpretation guidelines.

STR Data
Of the 30 participants that reported results, 25 participants evaluated the provided STR data. The most frequently reported amplification kit utilized was GlobalFiler ${ }^{\text {M }}$. For reference Item 1, all participants reported data that were in line with the consensus. For reference Item 2, all but one participant reported results in line with the consensus. The remaining participant reported " 11,0 " and "2,0" at DYS391 and $Y$ Indel whereas consensus was " 11 " and "2", respectively.

For questioned Item 3, four participants attempted the deconvolution of this mixture. However, due to the lack of reported data, no consensus was formed for major or minor profiles. A consensus was achieved for the full Item 3 profile (unseparated). All but three participants reported results in line with the consensus. One participant reported " $29,30,32.2$ " at D21S 11 whereas the consensus was "29,30,33.2". One participant reported " 10,0 " and "2,0" at DYS391 and $Y$ Indel whereas consensus was " 10 " and "2", respectively. One participant reported " $21,26.2$ " at SE33 whereas the consensus was " $14,21,26.2$ "; however, this participant stated in their additional comments that they did not report alleles below their lab's stochastic threshold.

For questioned Item 4, two participants attempted the deconvolution of this mixture. However, due to the lack of reported data, no consensus was formed for major or minor profiles. A consensus was achieved for the full Item 4 profile (unseparated). All but five participants reported results in line with the consensus. Similar to Item 3, one participant did not report alleles that were below their lab's stochastic threshold, and therefore did not match consensus at 10 loci. One participant was missing allele(s) at 7 loci. Two participants reported an additional allele at SE33 and D12S391. One participant reported "2,0" at $Y$ Indel whereas consensus was "2".

YSTR Data
Sixteen participants reported YSTR results.
For reference Item 2 and questioned Item 3, all participants reported data that were concordant with the consensus.
For questioned Item 4, all but one participant reported allelic responses that were concordant with the consensus. The remaining participant reported " $10,11,12,13$ " at DYS439 whereas the consensus was " 11,12 ".

## Conclusions

For Item 3, 29 of 30 participants reported that two (or at least two) individuals contributed to the mixture. The remaining participant reported that three individuals contributed to the mixture. When comparing the Item 3 mixture profile with the Item 1 (victim) reference profile, all participants reported that the victim was included as a component of the mixture. When comparing the Item 3 mixture profile with the Item 2 (suspect) reference profile, 29 participants reported that the suspect was excluded as a component of the mixture and one participant reported an inconclusive result.

For Item 4, 29 of 30 participants reported that three (or at least three) individuals contributed to the mixture. The remaining participant reported two individuals contributed to the mixture. When comparing the Item 4 mixture profile with the Item 1 (victim) reference profile, 28 participants reported that the victim was included as a component of the mixture and two participants reported an inconclusive result. When comparing the Item 4 mixture profile with the Item 2 (suspect) reference profile, 29 participants reported that the suspect was included as a component of the mixture and one participant reported an inconclusive result.

## Conclusions Response Summary

## Participants reporting conclusions: $\mathbf{3 0}$

Based on the examination of the DNA profiles provided, could the Victim (Item 1) and/or the Suspect (Item 2) be included as a possible contributor to the questioned Item?

## Statistical Analysis for Item 3

TABLE 5
WebCode

## Item 3 Methods $\&$ Results

2WFYKY Method(s): Likelihood Ratio
Stats Analysis: The evidence is 190 sextillion times more likely if the victim is a contributor to the DNA mixture than if she is not a contributor. This is very strong support for inclusion. The suspect is excluded.

46G4NY Method(s): Likelihood Ratio
Stats Analysis: The DNA profile from item 3 is 1 billion times more likely if item 1 (victim) and one unknown person are contributing rather than if two unknown persons are contributing. Item 2 (suspect) is excluded as a contributor to the STR and Y-STR DNA profiles from this item.
6NDN3Y Method(s): Likelihood Ratio
Stats Analysis: The genetic profile obtained from Item 3 is interpreted as a mixture of DNA from 2 contributors. Given this genetic profile, it is 6.1 quadrillion times more likely to observe this genetic profile if Item 1 (victim) and one unknown individual are the contributors than if two unknown individuals are the contributors.

| 86CKET | Method(s): Likelihood Ratio |
| :--- | :--- |
|  | Stats Analysis: The DNA profile from item 3 indicates a mixture of two individuals consistent with male |
| and female origin. This mixed DNA profile is approximately 340 quadrillion $\left(3.40 \times 10^{\wedge} 17\right)$ times |  |
| more likely to be observed if the Victim ( 001 -AA Item 1 ) and an unidentified male are the contributors |  |
| than if two random, unrelated African Americans are the contributors; approximately 1.77 quadrillion |  |
|  | $\left(1.77 \times 10^{\wedge} 15\right)$ times more likely than if two random, unrelated Caucasians are the contributors; and |
| approximately 29.6 quadrillion ( $2.96 \times 10^{\wedge} 16$ ) more likely than if two random, unrelated |  |
| Southwestern Hispanics are the contributors. |  |

## WebCode Item 3 Methods \& Results

ANQ9EV Method(s): Likelihood Ratio
Stats Analysis: The statistical analysis was done by STRmixTM software. For Item 1 Conclusion: LR $=3.02 \mathrm{E}+25(99 \% 1-$ SIDED LOWER HPD INTERVAL). The prosecution proposition means the DNA obtained from Item 3 originatd from the victim and an unknown, unrelated individual. The defence proposition means the DNA obtained from Item 3 originatd from two unknown, unrelated individuals. For Item 2 Conclusion: $L R=0$. The prosecution proposition means the DNA obtained from Item 3 originatd from the suspect and an unknown ,unrelated individual. The defence proposition means the DNA obtained from Item 3 originatd from two unknown ,unrelated individuals.

| CLLZMQ | Method(s): Likelihood Ratio |
| :--- | :--- |
| D6TPDT | Method(s): Likelihood Ratio |
|  | Stats Analysis: Item 1: 1.889e+25. Item 2: 4.628e-22 |

FUH8UL Method(s): Likelihood Ratio

Stats Analysis: The file types provided were not in the correct format for statistical calculations to be conducted.

| HKPXXM Method(s): Likelihood Ratio |  |
| :--- | :--- |
|  | Stats Analysis: The DNA profile of Item 3 is at least 5.2032E24 times more likely if it came from Item 1 | and an unknown unrelated person than it came from two unrelated members of the Hispanic population. Item 2 is excluded as a possible contributor to DNA profile of Item 3 (LR Total = 0)

HTEJ4L Method(s): Likelihood Ratio
Stats Analysis: Calculated as victim (Item 1) + 1 unknown individual vs 2 unknown individuals. Calculation assumes that all individuals are unrelated. Only loci which are included in NGM SElect have been included in the calculation (ie. not all loci as our software is not set up for all of the loci within Globalfiler). Likelihood ratio (LR) calculated is in excess of 1,000,000,000 times more likely under Hp (victim + one unknown individual) rather than under Hd (two unknown individuals). NB. In the [Country] there is a ceiling limit of $1,000,000,000$ to be used when reporting LRs even if the LR calculated is greater than $1,000,000,000$.
J9R83A Method(s): Likelihood Ratio
Stats Analysis: DNA typing results were obtained from Item 3. The DNA mixture is consistent with the DNA of the victim (ltem 1) and at least 2 additional unknown contributors with at least one being male. The probability of observing these DNA typing results is at least 17.0 octillion (17.0 E27) times more likely if it originated from Victim (Item 1) and 2 unknown individuals than if it originated from 3 unknown individuals. It is inconclusive wheter POI (Item 2) is a contributor to the DNA results detected in Item 3 as the likelihood ratio does not provide support for inclusion or exclusion. No additional conclusions can be made regarding the unknown contributors to the DNA mixture at this time. This analysis provides very strong support for the proposition that Victim (Item 1) is a contributor to the DNA mixture detected from Item 3.

## K68LKK Method(s): Likelihood Ratio

Stats Analysis: A mixed DNA profile of two individuals was developed from bloodstain on the pocket knife "Item 3". The DNA profile obtained from the reference sample "Item 1 " is being one of the contributor, however reference sample "Item 2" is excluded from being one of the contributor to this mixed DNA profile. The mixed DNA profile is 110 billion, 390 billion and 5.5 billion times more likely; if it originated from "ltem 1" and an unknown individual rather than; if it originated from two unknown unrelated individuals as calculated based on the [Location-identifying population databases].

## WebCode

## Item 3 Methods \& Results

NQUM6A Method(s): Likelihood Ratio
Stats Analysis: A mixed DNA profile of two (2) contributors was developed from "Item 3". The DNA profile obtained from "Item 1 " is consistent with being one of the contributor to this mixed DNA profile. The DNA profile obtained from "Item 2" is excluded from being the other contributor to the mixed DNA profile. The mixed DNA profile are 1.7 quintillion ( $1.7 \times 10 \mathrm{e} 18$ ), 150 quintillion ( $150 \times 10 \mathrm{e} 18$ ) and 360 quadrillion ( $360 \times 10 \mathrm{e} 15$ ) TIMES more likely IF they originated from "Item 1" (victim) and one unknown individual RATHER THAN; IF they originated from two unknown unrelated individuals as calculated based on the [Location-identifying population databases].

## NXRCLD Method(s): Combined Probability of Exclusion/Inclusion

Stats Analysis: The DNA profile obtained from Item 3 was found to be a mixed DNA profile of at least two contributors. The DNA profile obtained from Item 1 cannot be excluded as one of the contributors of the mixed DNA profile. The proportion of the [Country] (Hispanic) population whose individual DNA profiles cannot be excluded as contributors of the mixed DNA profile is $3.5 \times 10^{\wedge}-15$

## RFFZHD Method(s): Likelihood Ratio

Stats Analysis: Assuming the genetic profile detected on Item 3-(stain on the pocket knife) came from the Female Victim-Item 1, and an Unknown Male we concluded that: The genetic profile detected on Item 3 is aproximately: 199 quadrillions times more likely using the Hispanic population database, 177 quadrillions times more likely using the Caucasian population database, 2 quintillions times more likely using the African American population database, to have come from the Female Victim-Item 1 and an Unknown Male, than from any other unknown persons chosen randomly.

## UBJRCA Method(s): Likelihood Ratio

Stats Analysis: Under the assumption that the VICTIM (Item 1) and one unrelated person selected at random from the general population are contributors to the mixture developed from the STAIN ON THE POCKET KNIFE (Item 3), the likelihood of observing the mixed source profile is $\geq 1,000,000$ times greater (actual LR available upon request) than if it is assumed that two unrelated persons selected at random from the general population are contributors to this mixed-source sample.

## UYQCM9 Method(s): Likelihood Ratio

Stats Analysis: ITEM1 + 1UNKN vs $2 \mathrm{UNKN}=>$ (D.O. $=12 \%$ ) LRMIX STUDIO: 1.4E16; LAB RETRIEVER: 6.5E13 ; EFM: 1.2E32 ; DNAVIEW: 2.0E32. ITEM2 + 1UNKN vs 2UNKN => (D.O. $=10 \%$ ) LRMIX STUDIO: 3.0E-25 ; LAB RETRIEVER: $1.3 \mathrm{E}-25$; EFM: $1.3 \mathrm{E}-27$; DNAVIEW: 2.0E-228.

XNCLB8 Method(s): Likelihood Ratio
Stats Analysis: Assuming that the genetic profile has two contributors Victim Item 1 and an unknown contributor we conclude that the genetic profile detected on Item 3 is approximately: 199 Quatrillion times more likely using the Hispanic Population, 177 Quatrillion times more likely using the Caucasian Population, 2 Quintillion times more likely using the African American Population, to have come from the Victim Item 1 and an unknown contributor than from two unknown contributors chosen randomly.

ZL2HD2 Method(s): [Participant did not report a method.]
Stats Analysis: Working from the pdf of the electropherogram, it is not possible to perform a thorough evaluation of each locus. As a result it is possible to miss very minor contributions from additional contributors and be incorrect in the possible number of contributors to complex mixture samples. It is also not possible to thoroughly evaluate spikes, pullup, and baseline irregularities which can affect correct allele determinations. I am a forensic consultant that reviews DNA case files submitted to me as evidence. I review the analyst allele calls and evidence to reference sample comparisons so I can understand how the original analyst arrived at their opinions and conclusions. I accept that their population calculations are correct. NSD: No Size Data, INC: Inconclusive, N/A: Not Applicable

TABLE 5

## WebCode

## Item 3 Methods $\&$ Results

ZT22FW Method(s): Likelihood Ratio
Stats Analysis: A mixed DNA profile of two (2) contributors was developed from "Item 3". The DNA profile obtained from "ltem 1 " is being one of the contributor to this mixed DNA profile. The DNA profile obtained from "Item 2 " is excluded from being the other contributor to this mixed DNA profile. The mixed DNA profile are 1.7 quintillion ( $1.7 \times 10 \mathrm{e} 18$ ), 150 quintillion ( $150 \times 10 \mathrm{e} 18$ ) and 360 quadrillion (360x10e15) TIMES more likely; IF they originated from "Item 1" (Female Victim) and one unknown individual RATHER THAN; IF they originated from two unknown unrelated individual as calculated based on the [Location-identifying population databases].

# Statistical Analysis for Item 4 

TABLE 6

| WebCode | Item 4 Methods \& Results |
| :---: | :---: |
| 2WFYKY | Method(s): Likelihood Ratio |
|  | Stats Analysis: The evidence is 13 trillion times more likely if the victim is a contributor to the DNA mixture than if she is not a contributor. This is very strong support for inclusion. The evidence is 160 billion times more likely if the suspect is a contributor to the mixture than if he is not a contributor. This is very strong support for inclusion. |
| 46G4NY | Method(s): Likelihood Ratio |
|  | Stats Analysis: The DNA profile from item 4 is 1 billion times more likely if item 1 (victim), item 2 (suspect) and an unknown person are contributing than if item 1 (victim) and two unknown, unrelated persons are contributing. The DNA profile from the Y-STR profile from item 4 is a mixture of two males and is uninterpretable. As such, no determinations of inclusion or exclusion could be made for item 2 (suspect) to the Y-STR profile from item 4. |
| 6NDN3Y | Method(s): Likelihood Ratio |
|  | Stats Analysis: The genetic profile obtained from Item 4 is interpreted as a mixture of DNA from 3 contributors. Given this genetic profile, assuming Item 1 (victim) is a contributor, it is 599 billion times more likely to observe this genetic profile if Item 1 (victim), Item 2 (suspect) and one unknown individual are the contributors than if Item 1 (victim) and two unknown individuals are the contributors. |
| 86CKET | Method(s): Likelihood Ratio |
|  | Stats Analysis: The DNA profile obtained from this item is a mixture of three individuals consistent with both male and female origin. The DNA profile obtained from this item is a mixture consistent with the combined DNA profiles from the Victim (001-AA Item 1), the Suspect (001-AB Item 2), and the unidentified male individual from 001-AC Item 3 (Questioned sample from the stain on the pocket knife). This mixed DNA profile is approximately 141 million ( $1.41 \times 10^{\wedge} 8$ ) times more likely to be observed if the Victim (001-AA Item 1), the Suspect (001-AB Item 2) and an unidentified male are the contributors than if the Victim ( 001 -AA Item 1) and two random, unrelated African American males are the contributors; approximately 26.9 million $\left(2.69 \times 10^{\wedge} 7\right)$ times more likely than if the victim and two random, unrelated Caucasian males are the contributors; and approximately 15.1 million ( $1.51 \times$ $10^{\wedge} 7$ ) more likely than if the victim and two random, unrelated Southwestern Hispanics are the contributors. |

8D7TWY Method(s): Random Match Probability
Stats Analysis: A mixed DNA profile (PowerPlex Fusion 5C) consisting of DNA from at least two contributors was obtained from the victim's finger nail scrapings (item 4). A major male contributor and a minor male contributor were obtained from item 4. The DNA profile for the major contributor in item 4 is consistent with the DNA profile of the suspect (item 2). Therefore, the individual represented by item 2 (suspect reference sample) can not be excluded as a contributor of the DNA mixture obtained from item 4 . The probability of selecting a random, unrelated individual having a DNA profile identical to item 4 at the loci observed is 1 in $3.25 \mathrm{E}+30$ for African Americans, 1 in $7.64 \mathrm{E}+26$ for Caucasian Americans, 1 in $1.36 \mathrm{E}+27$ for Hispanic Americans, and 1 in $1.81 \mathrm{E}+26$ for Asian Americans. The DNA typing results for Item 4 in comparison to item 1 (victim reference sample) are inconclusive. The minor contributor DNA profile is unknown.

8ED97Q Method(s): Likelihood Ratio
Stats Analysis: The mixed DNA profile are 2.2 trillion ( $2.2 \times 10 \mathrm{e} 12$ ), 150 trillion ( $150 \times 10 \mathrm{e} 12$ ) and 390 billion ( $390 \times 10 \mathrm{e} 9$ ) TIMES more likely; IF they originated from reference samples "Item 1" (Female Victim - Hispanic) and "Item 2" (Male Suspect - Caucasian) and one unknown individual RATHER THAN; IF they originated from reference sample "Item 1" (Female Victim - Hispanic) and two unknown unrelated individuals as calculated based on the [Location-identifying population databases].

## Item 4 Methods \& Results

AEQJXU Method(s): Likelihood Ratio, 3.90E10
Stats Analysis: Hl :the mixture is made up of the victim's genetic profile (item 1), the suspect's genetic profile (item 2) and the genetic profile of an unknown unrelated person. H 2 :the mixture is made up of the victim's genetic profile (item 1) and the genetic profiles of two unknown unrelated people. $L R=3.90 \mathrm{E} 10$ (drop-out $=0.1$, drop- $\mathrm{in}=0.05$, Theta $=0.01$ )
ANQ9EV Method(s): Likelihood Ratio
Stats Analysis: The statistical analysis was done by STRmixTM software. For Item 1 Conclusion: LR $=7.88 \mathrm{E}+14$ ( $99 \% 1$-SIDED LOWER HPD INTERVAL). The prosecution proposition means the DNA obtained from Item 4 originatd from the victim and two unknown, unrelated individuals. The defence proposition means the DNA obtained from Item 4 originatd from three unknown, unrelated individuals. For Item 2 Conclusion: LR $=5.56 \mathrm{E}+22$ ( $99 \% 1$-SIDED LOWER HPD INTERVAL). The prosecution proposition means the DNA obtained from ltem 4 originatd from the victim, suspect and an unknown ,unrelated individual. The defence proposition means the DNA obtained from Item 4 originatd from the victim and two unknown , unrelated individuals.

| CLLZMQ | Method(s): Likelihood Ratio |
| :--- | :--- |
| D6TPDT | Method(s): Likelihood Ratio |
|  | Stats Analysis: Item 1: 2.149e+12. Item 2: 4.651e+11. |

FUH8UL Method(s): Likelihood Ratio
Stats Analysis: The file types provided were not in the correct format for statistical calculations to be conducted.
HKPXXM Method(s): Likelihood Ratio
Stats Analysis: The DNA profile of Item 4 is at least 3.2342E14 times more likely if it came from Item 1 and an unknown unrelated person than it came from two unrelated members of the Hispanic population. The DNA profile of Item 4 is at least 2.2306E12 times more likely if it came from Item 2 and an unknown unrelated person than it came from two unrelated members of the Caucasian population.

HTEJ4L Method(s): Likelihood Ratio
Stats Analysis: Calculated as Victim (Item 1) + Suspect (Item 2) +1 unknown individual vs Victim (Item 1) +2 unknown individuals. Calculation conditions on the presence of DNA from the victim (as sample taken from her fingernails and therefore DNA from her can be expected) and assumes that all individuals are unrelated. Only loci which are included in NGM SElect have been included in the calculation (ie. not all loci as our software is not set up for all of the loci within Globalfiler). Likelihood ratio (LR) calculated is approximately $34,000,000$ times more likely under Hp (victim + suspect + one unknown individual) rather than under Hd (victim + two unknown individuals). NB. In the [Country] there is a ceiling limit of $1,000,000,000$ to be used when reporting LRs even if the LR calculated is greater than 1,000,000,000.

## J9R83A Method(s): Likelihood Ratio

Stats Analysis: DNA typing results were obtained from Item 4. The DNA mixture detected in Item 4 is consistent with the DNA of Victim (Item 1), POI (Item 2), and an unknown male. The probability of observing this DNA mixture is at least 191 septillion (191 E24) times more likely if it originated from Victim, POI, and an unknown male than if it originated from Victim and 2 unknown males. The Victim is expected to be present in the DNA mixture and is assumed to be a contributor. No additional conclusions can be made regarding the unknown male contributor to the DNA mixture at this time. This analysis provides very strong support for the proposition that POI is a contributor to the DNA detected from Item 4

Stats Analysis: A mixed DNA profile of at least three individuals was developed from victims's fingernail scrapings "ltem 4". The DNA profiles obtained from the reference sample "Item 1" and "ltem 2" are consistent with being the contributors to this mixed DNA profile. The mixed DNA profile is 5.7 million, 5.7 million and 1.2 million times more likely; if it originated from "ltem 1", "ltem 2" and an unknown individual rather than; if it originated from "ltem 1" and two unknown unrelated individuals as calculated based on the [Location-identifying population databases].

## NQUM6A Method(s): Likelihood Ratio

Stats Analysis: A mixed DNA profile of at least three (3) contributors was developed from "Item 4". The DNA profile obtained from "Item 1" and "Item 2" is consistent with being the contributor to this mixed DNA profile. However other contributor cannot be identified. The mixed DNA profile are 2.2 trillion ( 2.2 $\times 10 \mathrm{e} 12$ ), 150 trillion ( $150 \times 10 \mathrm{e} 12$ ) and 390 billion ( $390 \times 10 \mathrm{e} 9$ ) TIMES more likely IF they originated from "ltem 1" (victim), "ltem 2" (suspect) and one unknown individual RATHER THAN; IF they originated from "Item 1" and two unknown unrelated individuals as calculated based on the [Location-identifying population databases].
NXRCLD Method(s): [Participant did not report a method.]
Stats Analysis: The DNA profile obtained from Item 4 was found to be an inconclusive, mixed DNA profile of at least three contributors that cannot be positively identified, hence no DNA comparison was made.
RFFZHD Method(s): Likelihood Ratio
Stats Analysis: Assuming the genetic profile detected on Item 4-(victim's fingernail scrapings) came from the Female Victim-Item 1, Male Suspect-Item 2 and an Unknown Male we concluded that: The genetic profile detected on Item 4 is approximately: 39 trillions times more likely using the Hispanic population database, 7 trillions times more likely using the Caucasian population database, 268 trillions times more likely using the African American population database, to have come from the Female Victim-Item 1, Male Suspect-Item 2 and an Unknown Male, than from any other unknown persons chosen randomly.
UBJRCA Method(s): Likelihood Ratio
Stats Analysis: Under the assumption that the VICTIM (Item 1) and two unrelated persons selected at random from the general population are contributors to the mixture developed from the VICTIM'S FINGERNAIL SCRAPINGS (Item 4), the likelihood of observing the mixed source profile is $\geq 1,000,000$ times greater (actual LR available upon request) than if it is assumed that three unrelated persons selected at random from the general population are contributors to this mixed-source sample. Under the assumption that the Suspect (ltem 2) and two unrelated persons selected at random from the general population are contributors to the mixture developed from the VICTIM'S FINGERNAIL SCRAPINGS (ltem 4), the likelihood of observing the mixed source profile is $\geq 1,000,000$ times greater (actual LR available upon request) than if it is assumed that three unrelated persons selected at random from the general population are contributors to this mixed-source sample.
UYQCM9 Method(s): Likelihood Ratio
Stats Analysis: ITEM1 + 2UNKN vs 3UNKN => (D.O.=15\%) LRMIX STUDIO: 8.7E10 ; LAB RETRIEVER:

## Amplification Kit Survey

Please list all PCR amplification kits (Autosomal and YSTR) utilized as well as any future kits yet to be implemented in your laboratory.

TABLE 8

| WebCode | Amplification Kit |
| :--- | :--- |
| 86CKET | Qiagen Investigator 24 plex QS, Qiagen Investigator 24 plex GO! |
| ANQ9EV | FastDirectTM DNA ID system 44Y; DNA TyperTM 21 kit; DNA TyperTM Y36 kit. |
| HTEJ4L | NGM Select, ESI-17, PPY23, ForenSeq DNA Signature Prep kit (massively parallel sequencing). |
| K68LKK | AmpFLSTR Identifiler Direct PCR Amplification Kit, AmpFLSTR Identifiler Plus PCR Amplification Kit, <br> GlobalFiler PCR Amplification Kit, GlabalFiler express PCR Amplification Kit, AmpFLSTR Y-filer PCR <br> Amplification kit, AmpFLSTR Minifiler PCR Amplification kit. |
| NXRCLD | GlobalFiler As of May 2022. This Laboratory does not utilise any YSTR kits. |
| RFFZHD | At our laboratory we have the following amplification kits: Identifiler, Yfiler, 24 Plex QS \& Go, and Flex <br> Plex 27. |
| XNCLB8 | Investigator 24 Plex QS, Investigator 24 Plex GO!, Identifiler, Y-filer, FlexPlex 27. |
| ZT22FW | Globalfiler Casework Amplification Kit. Globalfiler Express Amplification Kit. Yfiler PCR Amplification <br> Kit. |

## Additional Comments

## TABLE 9

## WebCode

## Additional Comments

| 86CKET | * notations indicate the presence of alleles less than stochastic threshold. Alleles less than stochastic threshold are not listed. For item 4-the profile listed in the major boxes is the deduced male for CODIS entry - it isn't a major. + notation indicates obligate allele for CODIS entry. |
| :---: | :---: |
| 8ED97Q | Statistical calculation was carried out using DNAVIEW soffware version 37.56 |
| CLLZMQ | DNA Analysis for Item 3: LR = Item $1+1 \mathrm{UN} / 2 \mathrm{UN}$. drop out for Item 10.00 , drop out for UN 0.01. $L R=1,41840$ E015. The probability of the evidence is 1,411840 E015 times more likely if the stain on the pocket knife came from Female Victim (ltem 1) and the unknown, unrelated individual, than if it came from two unknown unrelated individuals. The Male Suspect (ltem 2) is excluded as a possible contributor to the DNA obtained from Item 3. DNA Analysis for Item 4: LR $=$ Item $1+$ Item2 +1 UN / Item $1+2 \mathrm{UN}$. drop out for Item 1 and Item 20.00 , drop out for UN 0.01 . $\mathrm{LR}=1,31314 \mathrm{EO} 12$. The probability of the evidence is $1,31314 \mathrm{EO} 12$ times more likely if the victim's fingernail scrapings came from the Female Victim (ltem 1), the Male Suspect (Item 2) and the unknown, unrelated individual, than if it came from the Female Victim (Item 1) and two unknown unrelated individuals. |

FUH8UL Coment on NOC for item 4: vWA could indicate a fourth contributor due to the imbalance between the 14,20 genotype. However, when stutter is taken into account as well as the 20 allele being of a higher molecular weight than the 14, a conclusion that $\mathrm{NOC}=3$ is justifiable. Comment on statistical analysis: The file formats provided were not compatible with your statistical soffware. However I would expect all LRs to be $>100$ billion which is the upper limit of our reportable threshold.

HTEJ4L The LR calculations carried out only take into account the NGM SElect loci within Globalfiler as we do not have a validated software for the calculation of likelihood ratios for full Globalfiler profiles. None of the DNA profiling kits used in this CTS trial are kits used by this laboratory in the [Country]. The standard DNA profiling kits used in [Countries] are either NGM SElect or ESI-17, both of which are referred to as DNA- 17 chemistries and both analyse the same set of loci. Some labs use NGM SElect and others use ESI-17.
NQUM6A The statistical calculation was carried out using DNA View Soffware and calculated at 21 loci
RFFZHD A stutter was detected on item 3 at D3S1358.
XNCLB8 Stutter in D3S1358 of Item 3
ZT22FW The statistical calculation was carried out using DNA View Software and calculated at 21 loci.

## Collaborative Testing Services ~ Forensic Testing Program

## Test No. 22-5881: DNA Interpretation

# data must be submitted by June 6, 2022, 11:59 p.m. to be included in the report 

#### Abstract

Participant Code: U1234A WebCode: AXFXBJ The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

[^1]
## Part I: DNA ANALYSIS INSTRUCTIONS

- Use your laboratory's Interpretation guidelines for evaluation of this test.
- Please report Laboratory Specific Interpretation Guidelines below per amplification kit.
- If interpretation guidelines are not reported, the consensus information will be utilized in the review of results.

Analytical Threshold:
Peak Height Ratio (\%):
Stochastic Threshold (Peak Amplitude):
If you do not have Interpretation guidelines, please use the following guidelines and report these values above: For STR Analysis: Analytical Threshold: 75 rfu, Peak Height Ratio: 60\%, Stochastic Threshold (Peak Amplitude): 100 rfu

For YSTR Analysis: Analytical Threshold: 75 rfu, Peak Height Ratio: 50\%, Stochastic Threshold (Peak Amplitude): 75 rfu

- Report the allelic results for each Item in the appropriate response boxes.
- If major and minor contributor(s) can be distinguished and your laboratory normally reports this distinction, report the results of the major profile and the minor profile in the appropriately labeled boxes; otherwise, list the alleles in numerical order in the remaining row of boxes labeled with the Item number.
- Please Note: Samples were completely consumed during extraction.

Test No. 22-5881 Data Sheet, continued
Participant Code: U1234A
WebCode: AXFXBJ

## Part I: DNA ANALYSIS

## STR \& Amelogenin Results for Known Item 1

- Report alleles in numerical order, separated by a comma.
- Follow your laboratory procedures for reporting homozygotes (i.e. $\mathrm{X}, \mathrm{X}$ or X ) and null responses.
STR Amplification Kit Used For Item 1:
Please indicate the electropherogram(s) reviewed for this test.

## Part I: DNA ANALYSIS (continued).

## Item 3 DNA Analysis Questions

1) Record the number of contributors found in the Item 3 DNA profile:
2) Choose the conclusion statement that best describes the results of the analysis for Item $\mathbf{3}$ based on comparisons with the Known Items (If the wording below differs from the normal wording of your conclusions, adapt these conclusions as best you can and use your preferred wording in the Additional Comments section.):

## Item 1 Conclusion

Item 1 (victim) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 3.
Item 1 (victim) is excluded as a possible contributor to the DNA obtained from Item 3.
The DNA typing results for Item 3 in comparison with Item 1 are inconconclusive/uninterpretable.

## Item 2 Conclusion

Item 2 (suspect) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 3.
Item 2 (suspect) is excluded as a possible contributor to the DNA obtained from Item 3.
The DNA typing results for Item 3 in comparison with Item 2 are inconconclusive/uninterpretable.
3) Statistical Analysis of Item 3 DNA Typing Results:

Select the statistical method(s) used by marking the associated box and report these results in the space below:
$\square$ Combined Probability of Exclusion/Inclusions (CPE/CPI)
$\square$ Likelihood Ratio (LR)
$\square$ Random Match Probability (RMP)
Other:

Please note: Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.
4) Please list any databases used in the statistical analyses of Item 3 below.

## Part I: DNA ANALYSIS (continued).

## STR \& Amelogenin Results for Questioned Item 4

- Report alleles in numerical order, separated by a comma.
- Follow your laboratory procedures for reporting homozygotes (i.e. $\mathrm{X}, \mathrm{X}$ or X ) and null responses.
- For each locus, if a major and minor contributor can be distinguished and your laboratory normally reports this distinction, record the results in the appropriately labeled response boxes

STR Amplification Kit Used For Item 4:

$\square$ Identifiler® Plus
$\square$ Investigator® 24plex
$\square$ HID format

Please indicate the electropherogram(s) reviewed for this test.
$\square$ PowerPlex® Fusion 5C
DPDF format
$\square$ PowerPlex® Fusion 6C

Report the Probabilistic Genotyping Software Used (if applicable):

Alleles below are sorted in Default order.

## Part I: DNA ANALYSIS (continued).

## Item 4 DNA Analysis Questions

1) Record the number of contributors found in the Item 4 DNA profile:
2) Choose the conclusion statement that best describes the results of the analysis for Item 4 based on comparisons with the Known Items (If the wording below differs from the normal wording of your conclusions, adapt these conclusions as best you can and use your preferred wording in the Additional Comments section.):

## Item 1 Conclusion

Item 1 (victim) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 4.
Item 1 (victim) is excluded as a possible contributor to the DNA obtained from Item 4.
The DNA typing results for Item 4 in comparison with Item 1 are inconconclusive/uninterpretable.

## Item 2 Conclusion

Item 2 (suspect) is included (cannot be excluded) as a possible contributor to the DNA obtained from Item 4.
Item 2 (suspect) is excluded as a possible contributor to the DNA obtained from Item 4.
The DNA typing results for Item 4 in comparison with Item 2 are inconconclusive/uninterpretable.
3) Statistical Analysis of Item 4 DNA Typing Results:

Select the statistical method(s) used by marking the associated box and report these results in the space below:
$\square$ Combined Probability of Exclusion/Inclusions (CPE/CPI)
$\square$ Likelihood Ratio (LR)

RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.
CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

[^2]Have the laboratory's designated individual complete the following steps only if your laboratory is accredited in this testing/calibration discipline by one or more of the following Accreditation Bodies.

Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory

> ANAB Certificate No. (Include ASCLD/LAB Certificate here)

A2LA Certificate No.

Step 2: Complete the Laboratory Identifying Information in its entirety.

## Location (City/State)

[^0]:    This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

[^1]:    Scenario:
    Two male individuals were reportedly involved in the assault and robbery of a female victim. The female victim fought off her attackers and was then stabbed. The attacker with the knife was then tackled and injured by a male bystander during the assault. The attacker freed himself from the male bystander, stole the female victim's purse and both attackers fled the scene. A second witness to the assault called 911 and the female victim was brought to the hospital for treatment. A male suspect matching the description of one of the attackers was identified and brought into custody. A pocket knife containing reddish brown stains was found in the suspect's car and was collected as evidence. The stains were swabbed and confirmed as blood by the Serology unit and subsequently submitted for DNA analysis (Item 3). Fingernail scrapings were collected from the victim at the hospital and sent to the DNA unit for analysis (Item 4).

    HID and PDF file formats are provided for use in this test, choose any or all formats for evaluation.
    The Identifiler ${ }^{\text {TM }}$ Plus files that are included are utilizing the following amplification thresholds - Blue: 32 rfu, Green: 41 rfu, Yellow: 71 rfu, Red: 76 rfu, Internal Lane Standard (ILS): 500 rfu.
    Please note: The evidence file for this test cycle was updated on 4/20/22 to update the electropherogram PDF files for Identifiler ${ }^{\mathrm{TM}}$ Plus only. The MD5 hash value of the original evidence file is $186 e 752784889994113723 a b 9 b c 05283$ and the SHA1 value is
    3703cfbe359d7c530200ca1b3e1d839f197808b5. The MD5 and SHA1 hash values for the updated evidence files are listed below.

    ## Items Submitted (Sample Pack INT1):

    Item 1: DNA profile from reference sample (Female Victim - Hispanic)
    Item 2: DNA profile from reference sample (Male Suspect - Caucasian)
    Item 3: DNA profile from the stain on the pocket knife
    Item 4: DNA profile from the victim's fingernail scrapings
    To verify a complete and accurate download, the hash value for the downloaded . ZIP file is as follows:
    22-5881 Data for Participants.zip MD5 hash value: 932fe9d815de9063993acb5894a4dae5
    22-5881 Data for Participants.zip SHA1 hash value: 37dee74d8a3c98d296b9b426badd6ad00d5af751

[^2]:    This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section below must be completed.)
    This participant's data is not intended for submission to ASCLD/LAB, ANAB, and/or A2LA.
