This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack consisted of two known bloodstains on FTA Micro cards (Items 1 & 2), and two questioned stains; one on clean, yellow material (Item 3) and one on clean, grey heather material (Item 4). Participants were requested to analyze these items using their existing protocols.

SAMPLE PREPARATION: All stains were prepared from human whole blood which was either drawn into citric acid preservative blood bags or EDTA tubes. Item 1 (75 μ l) was prepared using blood collected from a female donor. Items 2 (75 μ l) and 4 (50 μ l) were both prepared using blood collected from the same male donor. Item 3 (50 μ l) was prepared using blood collected from another female donor different from Item 1. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on September 05, 2017 following receipt of predistribution results

SAMPLE SET ASSEMBLY: For each sample set, all four Items (1-4) were packed into separate envelopes and then placed together in a pre-labeled sample pack envelope. The sealed sample pack envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

VERIFICATION: All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR loci with the exception of one pre-distribution laboratory that was missing an allele call at D10S1248 for Item 3. This laboratory mentioned the likelihood of allele dropout at this locus. After an investigation, no changes were deemed necessary prior to distribution.

Summary Comments

The DNA-Blood test is part of the DNA Sample Specific Series, where participants are advised of the body fluid(s) that make up the questioned stains. This test is designed to allow participants to assess their proficiency in DNA analysis of dried bloodstains, data interpretation and/or reporting conclusions based on typing results. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Item 1 was created using blood collected from a female donor. Items 2 and 4 were created using blood collected from the same male donor. Item 3 was created using blood collected from another female donor different from the one used for Item 1. (See Manufacturer's Information for preparation details)

Of the 263 participants that returned results, 33 did not report DNA interpretations and of those, 30 stated that they analyzed samples for database purposes only.

For the Item 3 stain, all 230 participants excluded the victim (Item 1) as a possible contributor. There were 229 participants that excluded the suspect (Item 2), while one participant included the suspect as a possible contributor to the Item 3 stain.

For the Item 4 stain, all 230 participants excluded the victim (Item 1) as a possible contributor. There were 229 participants that included the suspect (Item 2), while one participant excluded the suspect as a possible contributor to the Item 4 stain.

Six participants reported allelic results that differed from the consensus/predistribution results. Of these, five participants reported inconsistent alleles at one or more loci, and one participant was missing an allele at the D10S1248 locus.

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA.
(Accreditation Release section on the last page must be completed and submitted.)
- This participant's data is NOT intended for submission to ASCLD/LAB, ANAB or A2LA.

Scenario:

Police are investigating the assault of a female victim at a bar. The victim claimed that while leaving a sports bar, she was assaulted by other patrons of the bar for "wearing the wrong team's shirt". After interviewing several witnesses, investigators were able to identify a suspect. Investigators submitted items of evidence and the screening has been completed with the following results: both the shirt collected from the victim (Item 3) and the pants collected from the victim (Item 4) tested positive for blood only. The screening lab is submitting these samples (Items 3 and 4) along with the known blood samples from the victim (Item 1) and the suspect (Item 2).

Items Submitted (Sample Pack S5):

- Item 1: Known blood from the female victim
Item 2: Known blood from the male suspect
Item 3: Questioned blood stain from the victim's shirt (yellow)
Item 4: Questioned blood stain from the victim's pants (grey heather)
