Test No. 23-5001 Summary Report

Each sample set consisted of two questioned samples containing powder substances, which participants were requested to analyze. Data were returned from 631 participants and are compiled into the following tables:

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample set consisted of two items. Item 1 contained 150 mg of powder consisting of lactose monohydrate. Item 2 contained 200 mg of powder consisting of approximately 12% methadone hydrochloride and 88% lactose monohydrate. Methadone hydrochloride is a Schedule II controlled substance in the United States.

SAMPLE PREPARATION: The lactose monohydrate in Item 1 is a pure powder. The methadone hydrochloride was a pure powder that was combined with lactose monohydrate to create Item 2. These two powders were mixed thoroughly to ensure homogeneity.

ITEM 1 (PREPARATION): Approximately 150 mg of the lactose monohydrate powder was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag, which was heat sealed and then placed into a pre-labeled envelope.

ITEM 2 (PREPARATION): Approximately 200 mg of the methadone hydrochloride and lactose monohydrate powder was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag, which was heat sealed and then placed into a pre-labeled envelope.

SAMPLE SET ASSEMBLY: One of each of the Item 1 and Item 2 envelopes were placed into a pre-labeled sample set envelope.

VERIFICATION: The above substances were identified by predistribution laboratories, who used the following combined list of methods: color tests, GC, GC/MS.

Summary Comments

This test was designed to allow participants to assess their proficiency in the qualitative analysis of questioned samples that may contain controlled substances. Item 1 contained approximately 150 mg of powder consisting of lactose monohydrate. Item 2 contained approximately 200 mg of powder consisting of approximately 12% methadone hydrochloride and 88% lactose monohydrate. In the United States, methadone hydrochloride is a Schedule II controlled substance (See Manufacturer's Information for preparation details).

For Item 1, 629 of 631 participants (99.7%) reported that no controlled substance was detected/identified. The remaining 2 participants reported that a controlled substance was identified. For Item 2, 630 of 631 participants (99.8%) reported Methadone hydrochloride. The remaining 1 participant reported no controlled substance was detected/identified.

The most common examination methods reported for both items include GC/MS, color tests, and FTIR.
