

Drug Analysis Test No. 14-502 Summary Report

This test was sent to 766 participants. Each sample pack consisted of two questioned samples containing powder substances which participants were requested to analyze. Data were returned from 668 participants (87.2% response rate) and are compiled into the following tables:

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack consisted of two items. Item 1 contained 250 mg of powder consisting of lactose monohydrate. Item 2 contained 200 mg of powder consisting of approximately 18.75% Phentermine HCl; the remainder of the sample consisted of tablet binders/fillers. Phentermine HCl is a Schedule IV controlled substance in the United States.

Sample Preparation-

The lactose monohydrate in Item 1 was a pure powder. Tablets containing Phentermine HCl were used for Item 2. The tablets were ground into powder and sieved before weighing each sample.

Item 1 (Preparation): Approximately 250 mg of the lactose monohydrate powder was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag. The small zip top bag was heat sealed and then placed into a pre-labeled 5 1/2 inch coin envelope.

Item 2 (Preparation): Approximately 200 mg of powder containing Phentermine HCl was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag. The small zip top bag was heat sealed and then placed into a pre-labeled 5 1/2 inch coin envelope.

SAMPLE PACK ASSEMBLY: One of each of the Item 1 and Item 2 envelopes was placed into a larger pre-labeled sample pack envelope.

VERIFICATION-

The above results were confirmed by predistribution laboratories, who used the following combined list of techniques: Color Tests, FTIR, ATR, GC, and GC/MS.

Summary Comments

This test was designed to allow participants to assess their proficiency in the examination of a sample which did not contain a controlled substance and in the identification of a sample that contained the controlled substance (in the USA) Phentermine HCl. Item 1 contained a powder consisting entirely of lactose monohydrate. Item 2 contained a powder consisting of 18.75% Phentermine HCl plus binders/fillers. Phentermine is a Schedule IV controlled substance in the United States. (See Manufacturer's Information for details)

For Item 1, 667 (99.9%) of 668 responding participants reported "No controlled substance detected/identified." The one remaining participant reported the presence of Naproxen.

For Item 2, 644 (96.4%) of 668 responding participants reported the presence of Phentermine. Twenty-four participants reported varying responses inconsistent with the consensus. Nineteen of those reported "No controlled substance detected/identified"; however, thirteen did mention Phentermine in the Additional Comments. Of the remaining five participants, three reported the presence of Methamphetamine and two reported the presence of phentermine and another controlled substance.
