

DNA Parentage Test No. 17-5870 Summary Report

This proficiency test was sent to 29 participants. Each participant received a sample pack consisting of the standard paternity trio, collected from a mother, a daughter and the potential father. Participants were requested to analyze the samples using their existing protocols. Data were returned from 27 participants (93% response rate) and are compiled into the following tables:

| | <u>Page</u> |

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

DNA Parentage

Manufacturer's Information

Each sample set was a collection of known blood samples, provided on FTA Micro cards, from three individuals (Items 1-3); a mother, a daughter and a potential father. Participants were requested to analyze these items using their existing protocols. Also included in the data sheet was a kinship exercise that consisted of autosomal DNA profiles of two individuals for comparison. Participants were requested to determine if an uncle/niece relationship claim was supported following the review of these profiles.

SAMPLE PREPARATION: All stains were prepared from human whole blood which was drawn into EDTA tubes. Item 1 (75 μ I) was blood from a female (mother) donor, Item 2 (75 μ I) was from a female (daughter) donor and Item 3 (75 μ I) was created using blood collected from a male donor who was not the biological father of the Item 2 female. Each different Item was prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on January 30th, 2017.

SAMPLE SET ASSEMBLY: For each sample set, all three Items (1-3) were placed in a pre-labeled sample pack envelope and sealed. The sample pack envelopes were then packaged in pre-labeled Heat Seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

KINSHIP EXERCISE: This exercise included allelic results representing an uncle/niece relationship.

VERIFICATION: Laboratories that conducted predistribution analysis of the samples reported consistent results and associations.

* Results were not received from a minimum of 10 participants for the loci indicated.

The 17-5870 DNA Parentage test was designed to allow participants to assess their proficiency in the analysis and interpretation of a standard trio of blood samples on FTA Micro cards. Item 1 was blood collected from a female donor (mother), Item 2 was blood collected from a female donor (daughter), and Item 3 was blood collected from a male donor who is not the biological father of the Item 2 female. Participants were requested to analyze the samples and provide allelic and statistical results as well as relationship conclusions. Sample sets also included a kinship exercise provided on the data sheets where participants were requested to evaluate the provided DNA profiles and report the kinship index and relationship conclusions (Refer to the Manufacturer's Information for preparation details).

One participant reported allelic results that differed from the consensus/predistribution results. This participant reported an inconsistent allele of "2" at DYS391 for Item 3. And although a consensus was not established for the Y Indel locus due to the fact that too few participants returned results, the allelic result reported by this participant of "10" is an uncommon response for this locus. It is possible that these two results were switched by the participant.

Paternity DNA results were returned by 27 participants and of those, 23 reported information relating to the paternity statistics such as the population database used, the calculated combined paternity index and/or the probability of paternity.

For the population database used, eight participants reported using the FBI POPSTATS database, ten reported using the NIST-STRBASE database and the remainder of participants reported using either a local database or Promega.

Of the 27 participants returning results, nine reported a CPI value between 1.4E-26 and 0 and one participant reported a CPI value of 2.68E+2. Five participants reported either "excluded" for the CPI value or stated in their additional comments section that the combined paternity index was not calculated for exclusions.

For the Probability of Paternity, most responding participants reported either a value of "0" or did not report a probability value. One participant reported a Probability of Paternity value of 99.63%.

For the Paternity Conclusions, all 27 participants reported that the male donor (Item 3) was excluded as the biological father of the female donor (Item 2).

For the Kinship Exercise, 11 participants responded. Five participants reported that the uncle/niece relationship claim was supported by the data provided and four of these participants reported a kinship index of 9.520 using the FBI Popstats database while one reported a kinship index of 3.223901 using the NIST-STRBASE database. Five participants did not make a determination in regards to whether the relationship claim was supported. Of these participants, three reported a kinship index around 1.9, all using a different population database. Of the remaining two participants that did not make a determination, one participant reported a kinship index of 2 without indicating the population database used for this calculation and another reported the kinship index 10.8433 using the Promega database. One participant reported that the relationship claim was not supported and using a local/state database reported a kinship index value of 3.4.

Kinship DNA Statistics

Is the claim of a Uncle/Niece (Hispanic) relationship supported by the genetic evidence?

| | | IT (DEE 7 | |
|---------|---|---------------|---|
| WebCode | Database | Kinship Index | Claim Supported? |
| 3ELFYL | FBI PopStats | 9.520 | Yes |
| DRFCPB | FBI PopStats | 9.52 | Yes |
| EZPZ4A | | 2 | Limited evidence to support |
| NN3BX2 | NIST-STRBASE | Not reported | Not reported |
| PEQETV | Local/State database | 3.4 | No, the statistical value does not support this relationship. |
| Q4MJAP | Promega | 10.8433 | Uncertain |
| QE8RVX | FBI PopStats | 9.520 | Yes |
| RTMA4R | NIST-STRBASE | 1.96 | Inconclusive |
| UPYH6V | FBI PopStats | 9.520 | Yes |
| VA3HTL | Local database | 1.955 | The genetic evidence neither can support nor contradict the claim |
| WAEX2J | FBI PopStats, Promega for Pentas D&E | 1.919 | lt is uncertain. |
| X2YEGK | NIST-STRBASE | 3.223901 | yes |

Additional Kinship Statistical Results

| WebCode | Additional Statistical Results |
|---------|--|
| 3ELFYL | The kinship index supports the hypothesis that Uncle is the uncle of Niece using the reference populations listed. The genotype observed for Uncle is "X" times more likely to occur in an uncle of Niece than in someone unrelated to Niece from the reference populations listed where "X" equals: African American – 28, Caucasian – 7.0, Hispanic – 9.5 |
| 8DFL8H | This type of kinship calculation not reported in this laboratory |
| DRFCPB | Autosomal STRs: The DNA profile is single source. The kinship index supports the hypothesis that Profile B is the uncle of Profile A using the reference populations listed. The genotype observed for Profile B is "X" times more likely to occur in a uncle of Profile A than in someone unrelated to Profile A from the reference populations listed where "X" equals: African American – 28, Caucasian – 7.0, Hispanic – 9.5 |
| PEQETV | No conclusion could be made as to whether the alleged Uncle is the biological Uncle of the Niece or not. |
| QE8RVX | The kinship index supports the hypothesis that "Uncle" is the uncle of "Niece" using the reference populations listed. The genotype observed for "Uncle" is "X" times more likely to occur in an uncle of "Niece" than in someone unrelated to "Niece" from the reference populations listed where "X" equals: African American - 28, Caucasian - 7.0, Hispanic - 9.5 |
| RTMA4R | At [Laboratory] cases with a likelihood ratio of between 1-20 will be reported as inconclusive. Cases with a likelihood ratio greater than 20 will be reported as conclusive. Thus, the outcome of this calculation is inconclusive. |
| UPYH6V | The kinship index supports the hypothesis that Uncle is the uncle of Niece using the reference populations listed. The genotype observed for Uncle is "X" times more likely to occur in a uncle of Niece than in someone unrelated to Niece from the reference populations listed where "X" equals: African American – 28, Caucasian – 7.0, Hispanic – 9.5 |
| VA3HTL | The likelyhood ratio (LR=1.955) can neither can support nor contradict the claim |
| WAEX2J | The relationship index is too low to provide convincing statistical support for a conclusion of the niece/uncle relationship, yielding a probability of a relationship of only 65.7%. NIST database used for non-FBI loci. |

Additional Comments

| WebCode | Additional Comments |
|---------|---|
| 82PRWA | Based on our laboratory SOP, when there is three or more genetic inconsistencies, we will exclude the alleged parent as a possible biological parent of the child. We do not calculate PI for individual locus if the alleged father is excluded. In addition, our laboratory does not perform uncle-niece relationship testing. |
| H3YEY7 | Additional DNA Section: NR = No Results [CTS moved Results/Notations reported for loci located in another section of the report to Table 3: YSTR Amplification Kit(s) & Results]. Item 3 Section: The PI box was left blank when the alleged father did not possess the obligate paternal allele at the locus. Paternity DNA Statistics Section: The Combined Paternity Index Value and Probability of Paternity boxes were left blank because the alleged father is excluded as a possible biological father of the child. |
| PEQETV | The results are reported as No Conclusion since the minimum calculated Index of less than 99 (prior odds = 0.25) is reported as such according to the standard operating procedures of this laboratory. The local/state database was used for calculation purposes and the most conservative likelihood ratio was used (Caucasian). The Identifiler Plus Loci set was considered for the above likelihood ratio calculation. |
| QH9VLZ | As per Biological Sceinces Group paternity method, if there are three or more inconsistencies with parentage, the alleged father is reported as excluded as being the true father of the child given the profile available from the mother is the biological mother. In these instances the paternity index is not calculated and the alleged father is reported as excluded. |
| QWRHVX | NR = no result |
| RTMA4R | Part II [Table 5: Paternity DNA Statistics]: Alleged father is excluded (6 inconsistencies), thus no statistical calculation was carried out. |

- U2TTFM Yfiler was not used for analysis because the child is female and is also unrelated to the alleged father.
- XCF2QK Our laboratory does not yet calculate PI at the expanded fusion loci.

Appendix: Data Sheet

Collaborative Testing Services ~ Forensic Testing Program

Test No. 17-5870: DNA Parentage

| Accreditation Release Statement |
|--|
| CTS submits external proficiency test data directly to ASCLD/LAB, ANAB and A2LA. Please select one of the following statements to ensure your data is handled appropriately. |
| This participant's data is intended for submission to ASCLD/LAB, ANAB and/or A2LA. (Accreditation Release section on the last page must be completed and submitted.) |
| This participant's data is NOT intended for submission to ASCLD/LAB, ANAB or A2LA. |

Scenario:

A standard paternity trio case has been presented to your laboratory. Blood standards have been collected from the mother, daughter, and alleged father. Your laboratory is tasked with examining the blood standards and comparing the DNA profiles.

Items Submitted (Sample Pack DNP1):

Item 1: Blood Sample from Known Parent (Mother)

- Item 2: Blood Sample from Known Child (Daughter)
- Item 3: Blood Sample from Alleged Father (Caucasian)

Please note Data Sheet Changes

The data sheet has been updated to include the GlobalFiler[™] and PowerPlex[®] Fusion amplification kits. The sheet has also been updated to include the Next Generation Sequencing Kit ForenSeq[™] and the associated STR and YSTR loci.

The YSTR section has also been expanded to include all of the YFiler® Plus loci.

<u>For the amplification kits that contain both STR and YSTR loci, please select the</u> <u>corresponding kit in the STR and YSTR sections, and enter the loci for those sections.</u>

If a locus is not listed on the following pages of this data sheet, use the "Additional DNA Results" table below to report those results.

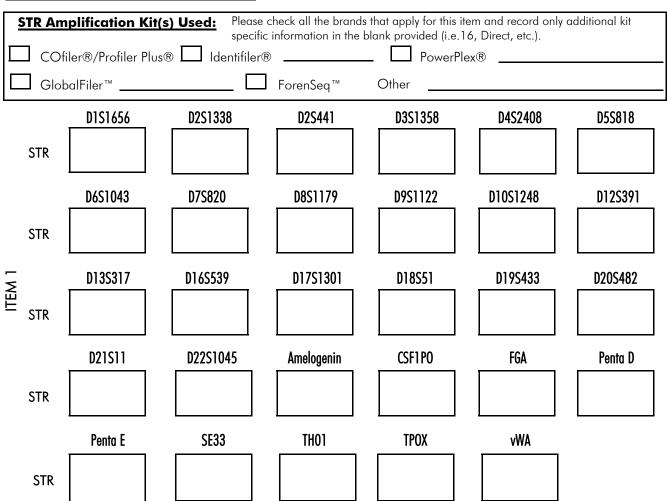

DNA Reporting Instructions:

Use the instructions below to complete the following DNA Analysis sections of this data sheet.

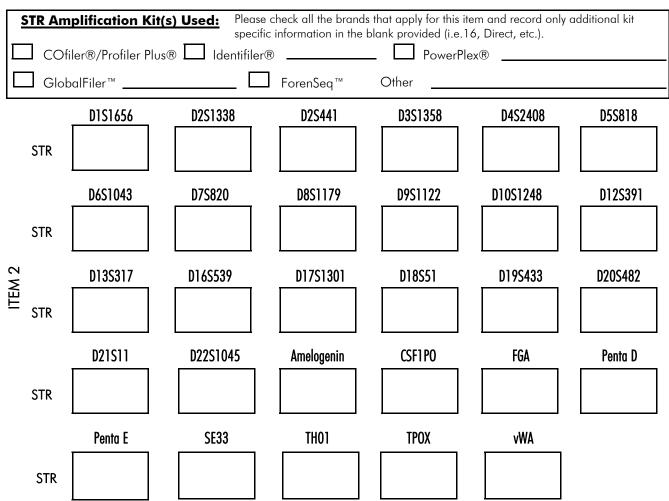

- * Report alleles in numerical order, separated by a comma.
- * Follow your laboratory procedures for reporting homozygotes (i.e. "14,14", "14,-", "14")
- * PI = Paternity Index; KI Kinship Index

| Example | D1S1656 | D2S1338 | D2S441 | D3S1358 | D4S2408 | D5S818 |
|---------|---------|---------|--------|---------|---------|--------|
| STR | 15,18 | 12,17 | 10 | 14 | 12 | 5,13 |
| PI | 1.65 | 3.01 | 3.16 | 4.12 | 2.45 | 5.65 |

Part I: DNA ANALYSIS FOR ITEM 1

Part I: DNA ANALYSIS FOR ITEM 2

Please return all pages of this data sheet.

Part I (Continued): Additional DNA Results

Please use the section below to report results only for loci not available on the following pages.

Please return all pages of this data sheet.

Page 5 of 9

Part II: PATERNITY DNA STATISTICS

For the purposes of consistency among reported statistical values, use the ethnicity listed for the alleged parent and choose one of the following population databases for all statistical calculations in this test:

1. **FBI Popstats:** If FBI Popstats is already available in your laboratory then you may select that option, otherwise use the population database below.

2. **NIST-STRBASE** is a publicly available U.S. population dataset at STRBASE on the following NIST web site : http://www.cstl.nist.gov/strbase/NISTpop.htm#Autosomal

a. On the NIST web site, select the hyperlink labeled "Allele frequencies from autosomal STRs as Excel file" under the title "NIST 1036 U.S. Population Dataset".

3. If you are unable to use one of the suggested population databases, report the population database used in the blank provided next to the "Other Pop. Database" option. Due to the tendency for allele frequencies to vary amongst different databases, no consensus value will be determined for this option. When reporting a population database name, please refrain from using terms that would allude to a laboratory specific name or location; general terms such as "local/state database" or "laboratory specific database" are preferred.

1) Choose a Population Database:
FBI Popstats Pop. Database
Other Pop. Database:
2) Record the Combined Paternity Index value:
3) Record the Probability of Paternity:

4) Based on DNA results, select your response from the following options. If the wording differs from the normal wording in your reports, adapt these conclusions as best as you can and use your preferred wording in your additional comments.

The Alleged parent (Item 3) could not be excluded as the biological parent of the child (Item 2).

The Alleged parent (Item 3) is excluded as a possible biological parent of the child (Item 2).

Inconclusive as to whether the Alleged parent (Item 3) could be the biological parent of the child (Item 2). (Please document the reason in the Additional Comments section of this data sheet.)

Part III: KINSHIP DNA STATISTICS (NON-PARENTAGE)

To be completed if applicable to your laboratory.

The two DNA profiles below are presented as a potential Uncle/Niece (Hispanic) relationship. Compare these profiles to answer the questions using the same population database used in previous sections of the data sheet, given the ethnicity listed above for this kinship scenario.

| Profile | D1S1656 | D2S1338 | D2S441 | D3\$1358 | D5S818 | D7\$820 |
|---------|-----------|----------|-----------|------------|---------|---------|
| Niece | 17.3,17.3 | 17,20 | 10,10 | 15,16 | 11,11 | 9,10 |
| Uncle | 13,14 | 16,19 | 10,14 | 13,16 | 11,12 | 9,10 |
| Profile | D8S1179 | D10S1248 | D12S391 | D13S317 | D165539 | D18\$51 |
| Niece | 12,14 | 13,16 | 17,20 | 8,14 | 11,12 | 15,16 |
| Uncle | 13,14 | 13,15 | 18.3,21 | 8,9 | 9,11 | 15,16 |
| D (I | D100(100 | D01611 | D0001045 | | 000100 | 504 |
| Profile | D19S433 | D21S11 | D22S1045 | Amelogenin | CSF1PO | FGA |
| Niece | 14,15.2 | 29,30 | 16,16 | X,X | 12,12 | 20,25 |
| Uncle | 12,12 | 29,30.2 | 15,15 | X,Y | 10,11 | 19,25 |
| | | | | | | |
| Profile | PentaD | PentaE | SE33 | TH01 | TPOX | vWA |
| Niece | 9,11 | 14,16 | 16.3,26.2 | 9.3,9.3 | 8,8 | 17,18 |
| Uncle | 11,11 | 5,14 | 17,21.2 | 6,9.3 | 8,8 | 14,18 |

1) Evaluate the profiles above and record the kinship index.

2) Is the claim of a Uncle/Niece (Hispanic) relationship supported by the genetic evidence?

3) Use the space provided to document any additional statistical results and relationship conclusions.

Part IV: ADDITIONAL COMMENTS

Comments regarding any part of this Parentage Test.

Any interpretations based on the results obtained should be reported in the Paternity DNA Statistics designated section.

<u>Return Instructions:</u> Data must be received via online data entry, fax (please include a cover sheet), or mail by *April 03, 2017* to be included in the report. Emailed data sheets will not be accepted.

RELEASE OF DATA TO ACCREDITATION BODIES

The following Accreditation Releases will apply only to:

Participant Code:

WebCode:

for Test No. 17-5870: DNA Parentage

This release page must be completed and received by <u>April 3, 2017</u> to have this participant's submitted data included in the reports forwarded to the respective Accreditation Bodies.

Have the laboratory's designated individual complete the following steps only if your laboratory is accredited in this testing/calibration discipline by one or more of the following Accreditation Bodies.

| Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory | | | | | |
|--|--|--|--|--|--|
| ASCLD/LAB Certificate No. | | | | | |
| ANAB Certificate No. | | | | | |
| A2LA Certificate No. | | | | | |
| Step 2: Complete the Laboratory Identifying Information in its entirety | | | | | |
| Signature and Title | | | | | |
| Laboratory Name | | | | | |
| Location (City/State) | | | | | |
| | | | | | |

| Accreditation Release | | | | | |
|---|---|--|--|--|--|
| Please submit the completed Accreditation Release at the same time as your full data sheet. See Data Sheet | <i>Questions? Contact us 8 am-4:30 pm EST</i> Telephone: +1-571-434-1925 | | | | |
| Return Instructions on the previous page. | email: forensics@cts-interlab.com | | | | |

Please return all pages of this data sheet.
