Blood Alcohol Analysis

Test No. 22-5642 Summary Report

Each sample set consisted of four vials of blood with differing concentrations of ethanol. Participants were asked to determine the blood alcohol concentration of each item. Data were returned from 269 participants and are compiled into the following tables:

| | <u>Page</u> |
|---|-------------|
| <u>Manufacturer's Information</u> | <u>2</u> |
| <u>Summary Comments</u> | <u>3</u> |
| <u>Table 1: Reported Results</u> | <u>4</u> |

| <u>Appendix: Data Sheet</u> | |

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample set consisted of four vials of blood, each with a different blood alcohol concentration (BAC). Participants were requested to analyze the contents of each vial and report the blood alcohol concentration.

SAMPLE PREPARATION-

A stock solution of 10% ethanol in water was used to spike each item. The stock solution was prepared by combining absolute ethanol with distilled water and stored appropriately to prevent evaporation.

ITEMS 1, 2, 3, and 4 (PREPARATION): Sample preparation consisted of adding a predetermined amount of ethanol stock solution to pooled human whole blood. The equivalent of 1% w/v sodium fluoride was added and then stirred. A volume of 5mL of the mixture was pipetted into each of the pre-labeled vials, which contained 11mg potassium oxalate and 13.75mg sodium fluoride (this NaF was included in the 1% w/v NaF calculation). The vials were sealed and inverted to mix the chemicals in the vials with the blood solution. All vials were placed in a refrigerator immediately after production and remained there until the sample sets were prepared.

VERIFICATION: Laboratories that conducted predistribution analysis of the samples reported consistent results that were comparable to the preparation BAC for all items.

SAMPLE SET ASSEMBLY: Once verification was completed, each sample set was assembled with an Item 1, 2, 3 and 4 and placed into a Department of Transportation regulated shipping container. Each sample pack was returned to the refrigerator until shipment.

| Item | Preparation BAC (g/100mL) |
|------|---------------------------|
| 1 | 0.06 |
| 2 | 0.27 |
| 3 | 0.13 |
| 4 | 0.18 |

Please note that the Preparation Value is the value used for calculations during the test preparation phase and may not necessarily represent the final concentration of the samples. It is advised to wait for the Grand Mean statistics available in the Summary and Individual Reports before evaluating performance.

Summary Comments

This test was designed to allow participants to assess their proficiency in the quantitative analysis of ethanol in human blood. Each participant was supplied with a sample set consisting of four vials of blood, each of which had been spiked with differing amounts of ethanol to produce each preparation blood alcohol concentration (BAC). Participants were requested to determine the blood alcohol concentration for Items 1 - 4 (Refer to the Manufacturer's Information for preparation details).

The report that follows contains data as provided by the participants. BAC results are separated into two tables: reported results and raw analytical data. Table 1, Reported Results, shows the BAC and uncertainty that each participant would report according to their normal reporting procedures (e.g. mean, lowest result, truncated results). Table 3, Raw Data, shows the results in specified units (g/100mL) from each determination made by the laboratory to produce their reported result. The raw data was used to calculate the grand mean and the standard deviation for each item. The grand mean and standard deviation are supplied to assist the participants and accrediting bodies in determining the acceptability of the results. Participants with extreme data (± 5 STD from grand mean) have been marked with an "X", and their results were excluded from the calculations of the grand mean and standard deviation.

A total of four participants provided extreme data for one or more test items. Of these, one participant had extreme data for all four items, two had extreme data for three items and one participant had extreme data for two items.

The most common reporting method of BAC is the mean of duplicate/several determinations. The most utilized method of analysis reported by participants is Headspace GC.

Reported Results

What is the blood alcohol concentration of the sample in each of the vials?

| Percent: | 87.4% | 5.6% | 0.4% |

Additional Comments

TABLE 5

| WebCode | Additional Comments |
|---------|--|
| 2PLYZ3 | Uncertainty of measurement (5% at 3 standard deviations) is calculated from the mean of several determinations, rounded to four decimal places, and reported in the same units as results. Ethyl alcohol indicated with values of less than 0.020 g/100cc, but greater than 0.000 g/100cc, are reported as "below reportable limit". |
| 2QWZL2 | Uncertainty of measurement (5% at the 99.7 confidence interval) is calculated from the mean of several determination, rounded up (to three decimal places), and is reported in the same units as results. Sampled tubes are not completely filled - headspace over samples may contribute to some loss of volatile. |
| 2UY2LX | n-propanol internal standard |
| 2VAWAB | Results are reported at a confidence greater than 99.73%. |
| 3JV73T | IS: n-propanol |
| 3TGWKY | The above results are true analytical values. Routine drink-drive results are reduced by 6% (if the analytical mean is 0.1 g/100mL or greater) or 0.006 g/100mL (if the analytical mean is less than 0.1 g/100mL) and the reported value is prefixed with "not less than". |
| 4WEANU | N-propanol used as internal standard. |
| 68DZA3 | According to [Code of State Regulations]: "For blood tests for alcohol content, the accepted scientific uncertainty in measurement is plus or minus 0.005 g/100 mL or 10 percent of the average of measurements, whichever is greater." |
| 6E9T93 | Internal standard: n-propanol. LOD ethanol: 3 mg/100 mL. LOQ ethanol: 15 mg/100 mL |
| 6EU7UV | All results provided would have 6% subtracted before being reported to the customer. |
| 6X6T6L | Headspace GC FID/MS |
| 7JYWLK | Internal Standard: n-propanol. Flame ionization detector for quantitation and mass spectrometer for structural elucidation. |
| 89DMJQ | 6mg/100ml was subtracted from the raw data determinations for uncertainties in order to obtain the final reported results. |
| 8LKQTR | Results are averaged and then truncated to third decimal place, not rounded up. Raw data is five decimals. |
| AA3X8P | Sample was kept by others laboratory and not stored in chiller upon receiving about a week due assuming the parcel is belonging to them. It is advisable for the next CTS sample where PT provider should note the person in charge of the participant lab instead of noted to the Division Head only. |
| BZNDJJ | No uncertainty is reported because in [State] there is no legal limit for alcohol concentration. |
| C223NG | GC-FID |
| CPNHZZ | GC# 8. The blood alcohol concentration reported in 1a [Table 1: Reported Results] represents a truncated average value of duplicate analyses measuring e.g. 0.069 % and 0.074 %. The average value of the duplicate analyses with its expanded uncertainty is e.g. 0.071 +/- 0.003%. The expanded uncertainty is reported at a 99% confidence level. |
| DKUDVG | We calculated the average to report using 5 digits. Section 2 [Table 3: Raw Data & Statistical Analysis] above would only allow me to input 4 digits. |
| DRQD73 | Samples received on 09/01/2022; not refrigerated upon receipt, kept in office at room temperature until transfer on 09/06/2022 |
| DUWBLH | INTERNAL STANDARD IS N-PROPANOL |

TABLE 5

| WebCode | Additional Comments |
|---------|---|
| EJXP4Q | Tube A=1; Tube B=2; Tube C=3; Tube D=4 |
| EV7FXL | 0.02 g/dL n-propanol internal standard. |
| FHE7RR | According to [Code of State Regulations] "For blood tests for alcohol content, the accepted scientific uncertainty in measurement is plus or minus 0.005 g/100mL or 10 percent of the average of measurements, whichever is greater." |
| FNJ8QZ | HS/GC/FID for quantification HS/GC/MS for identification |
| FY8VRV | GC#10 The blood alcohol concentration reported in 1a [Table 1: Reported Results] above represents a truncated average value of duplicate analyses measuring e.g. 0.069% and 0.072%. The average value of the duplicate analyses with its expanded uncertainty is e.g. 0.070% +/-0.003%. The expanded uncertainty is reported at a 99% confidence level. |
| GJPYUT | The final report values on the report are truncated, two-digit mean and then the three-digit mean +/- UOM follow. Item #1=0.07; Item #2=0.27; Item #3=0.14; Item #4=0.17 |
| HFKR9E | ISTD: n-propanol |
| HVTCDH | Internal Standard: n-propanol (0.02g%) |
| JFZZLT | GC #9 The blood alcohol concentration reported above represents a truncated average value of duplicate analysis measuring e.g. 0.286% and 0.285%. The average value of the duplicate analyses with its expanded uncertainty is e.g. 0.285% +/- 0.012%. The expanded uncertainty is reported at a 99% confidence level. |
| KBHRME | Raw data in question 2 [Table 3: Raw Data & Statistical Analysis] had data going out to 5 decimal places; the final value was truncated for all data. Results are from predistribution test analysis. |
| KUXDDA | Analytes were quantitated by Flame Ionization Detector. Mass Spectrometer was used to identify analytes qualitatively. |
| M8D9NQ | Acetaldehyde was detected in all items. |
| MGZQ6Y | Samples reached [Country] on 19 September 2022 , however, the laboratory was not notified on arrival and clearance of samples. Only after enquiry near the closing date that the laboratory took note that the samples were retained. The samples were released and received on 19 October 2022. |
| MUND76 | internal standard: 0.02g/dL n-propanol |
| PPMRR8 | Internal Standard: n-propanol |
| Q8V3LN | The blood is a dark brown/black with a green tint. |
| RF42NX | Note that our Laboratories policy is that we report uncertainty of measurement only when result within critical intervals. |
| RMPFQP | Headspace autosampler with a dual column gas chromatograph with flame ionization detector and mass selective detector. |
| RTVQN4 | The results reported include an allowance for normal analytical variation. When applying uncertainties to results, 6mg/100mL or 6%, whichever is the greatest, is subtracted from the mean of the measured values before the result is reported as "not less than X mg/100mL. All values are rounded down. this approach is consistent with current [Country] forensic practice. For example, for item 1, the mean is 73.18 mg/100mL; -6mg/100mL gives a reportable result of "not less than 67 mg/100mL. For example, for item 2, the mean is 274.75 mg/100mL; -6% gives a reportable result of "not less than 257 mg/100mL. |
| TBUNJP | In calculating uncertainty of measurement, k=3 with a 99.7% level of confidence. 6.0% of the nominal value or 0.005g% (whichever is greater) is used when doing so. |
| TLAJUJ | Internal standard: n-propanol |

TABLE 5

| WebCode | Additional Comments |
|---------|---|
| U2JMXP | The results are expressed as the measured value \pm the expanded uncertainty, which corresponds to a $k=3$ or 99.7% level of confidence. Measured values are calculated as the truncated mean of the 4 results to 3 decimal places. The expanded uncertainty is calculated either by multiplying the measured value by the current uncertainty and using normal rounding rules, or by using the minimum value (0.005) where applicable. |
| UH8AC9 | Sample was received several days later due to Office Location moved. |
| ULPYPC | Reported values (1a) [Table 1: Reported Results] are average of duplicate determination truncated to three decimal places. |
| W3NNJT | The [Laboratory] quantitative range for ethanol is 0.010 – 0.400 g/100 mL. All reported results are average values. |
| WE3KLC | Uncertainty is reported as following: $0.005 \leq 0.10$ grams% and $5\% > 0.10$ grams%. Samples arrived warm. |
| WLYKWX | Note that our laboratory's policy is that we do not report uncertainty of measurement on our final reports, which is why it was not reported for this survey. However, our uncertainty of measurement is included for each sample in its corresponding case file/discovery packet, which includes all raw data. |
| XLW3HZ | ISTD: n-propanol |
| Y4Q6R9 | 1-propanol internal standard |
| YG27E8 | Data fields above cut off the results and the last digit was not recorded. |

-End of Report-
(Appendix may follow)

Collaborative Testing Services ~ Forensic Testing Program

Test No. 22-5642: Blood Alcohol Analysis

DATA MUST BE SUBMITTED BY **Oct. 31, 2022, 11:59 p.m.** TO BE INCLUDED IN THE REPORT

Participant Code: U1234E

WebCode: HJ3GLH

The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

Test Description:

Investigators have submitted four tubes of blood from separate cases to be examined; each was taken from a person suspected of driving under the influence of alcohol. Using your laboratory's procedures, analyze each tube and report the blood alcohol concentration.

Please disregard the tube's labeling with regard to NaF; additional NaF was added to achieve a 1% w/v concentration in the blood.

Items Submitted (Sample Pack BAC2):

Items 1-4: Vials of Blood

1a.) What is the blood alcohol concentration of the sample in each of the items? (Results should be reported using your laboratory reporting criteria for decimal places, uncertainty determinations, and units.)

| | Uncertainty (k= <input type="text"/>) | Units |
|---------|---|--------------------------|
| Item 1: | <input type="text"/> ± <input type="text"/> | (<input type="text"/>) |
| Item 2: | <input type="text"/> ± <input type="text"/> | (<input type="text"/>) |
| Item 3: | <input type="text"/> ± <input type="text"/> | (<input type="text"/>) |
| Item 4: | <input type="text"/> ± <input type="text"/> | (<input type="text"/>) |

1b.) Are the values listed above:

The mean of duplicate / several determinations?

The lowest value of duplicate / several determinations?

Other? (Specify):

2.) Please list your raw data determinations below in g/100mL. (Results not reported in g/100mL will be excluded from statistical calculations).

Average

Raw Data averages are being provided to assist in confirming data entry.

Note to our international clients: due to differences in metric formatting and browser settings, averages may be off by a factor.

3a.) Date Samples Received:

3b.) Date(s) Samples Analyzed:

4.) Method of Analysis:

 Headspace GC

Direct Injection GC

Alcohol Dehydrogenase

Other:

5.) Additional Comments

Please note: Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section below must be completed.)
- This participant's data is **not** intended for submission to ASCLD/LAB, ANAB, and/or A2LA.

Have the laboratory's designated individual complete the following steps
only if your laboratory is accredited in this testing/calibration discipline
by one or more of the following Accreditation Bodies.

Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory

ANAB Certificate No.
(Include ASCLD/LAB Certificate here)

A2LA Certificate No.

Step 2: Complete the Laboratory Identifying Information in its entirety.

Authorized Contact Person and Title

Laboratory Name

Location (City/State)
