## Forensic Biology Test No. 22-5702

### Summary Report

Each participant received a sample pack consisting of two known bloodstains and two questioned stains which they were requested to analyze using their existing protocols. Data were returned from 789 participants and are compiled into the following tables:

<a href="#"><u>Appendix: Data Sheet</u></a>	

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample pack consisted of two known bloodstains on FTA cards (Items 1 & 2), and two questioned stains on clean, colored fabric (Item 3 & 4). Participants were requested to analyze these items using their existing protocols.

**SAMPLE PREPARATION:** The stains on Items 1, 2, 3, and 4 were prepared using human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. Item 1 (75  $\mu$ l) was created using blood from a female donor. Items 2 (75  $\mu$ l) and 4 (50  $\mu$ l) were created using blood from the same male donor. Item 3 (50  $\mu$ l) was created using blood from the female donor used in Item 1 and blood from the male donor used in Item 2. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on March 1, 2022 following completion of the verification stage.

**SAMPLE SET ASSEMBLY:** For each sample set, all four items (1-4) were packaged into separate envelopes and then placed together in a pre-labeled sample pack envelope and sealed. The sealed sample pack envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

**VERIFICATION:** All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR loci.

## Manufacturer's Information, continued

### Amelogenin and STR Results

*Results compiled from predistribution laboratories and a consensus of at least 10 participants.*

\* Results were not received by a minimum of 10 participants for the loci indicated.

NM - Non-Male profile, YSTR results not expected.

## Manufacturer's Information, continued

### Mitochondrial DNA Sequencing Results

#### Nucleotide Ranges Tested

The nucleotide ranges provided below represent the range tested by a minimum of 75% of participants.

Item	HVR-II	HVR-I
1	<b>49-407</b>	<b>16024-16390</b>
2	<b>66-392</b>	<b>16024-16390</b>
4	<b>63-385</b>	<b>16024-16380</b>

#### Deviations HVR-II, HVR-I

The base deviations presented here are the consensus of results reported by at least ten participants. These results may not represent all base deviations reported by every participant due to the specific nucleotide ranges sequenced by individual participants.

ITEM 1	C	72.0	G	93.0	C	195.0	G	263.0	C	315.1	A	16153.0	C	16298.0
--------	---	------	---	------	---	-------	---	-------	---	-------	---	---------	---	---------

ITEM 2	G	73.0	A	185.0	G	188.0	A	228.0	G	263.0	T	295.0	C	309.1
--------	---	------	---	-------	---	-------	---	-------	---	-------	---	-------	---	-------

ITEM 4	G	73.0	A	185.0	G	188.0	A	228.0	G	263.0	T	295.0	C	309.1
--------	---	------	---	-------	---	-------	---	-------	---	-------	---	-------	---	-------

## Summary Comments

The 22-5702 Forensic Biology test was designed to allow participants to assess their proficiency in the identification and comparison of dried stains by means of body fluid screening and/or DNA profiling. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Item 1 was created using blood from a female donor. Items 2 and 4 were created using blood from the same male donor. Item 3 was created using blood from the female donor used in Item 1 and blood from the male donor used in Item 2. (See Manufacturer's Information for preparation details)

Data were returned by 789 participants.

### Screening Test Results:

Screening results for body fluids (blood, semen, saliva) were returned by a total of 680 participants. However, not all of these participants returned screening results for all fluids for both questioned items.

For Item 3, all participants reported "Positive" for the presence of blood. For the presence of semen, all participants reported "Negative." For the presence of saliva, all responding participants reported "Negative." Additionally, all responding participants reported "Positive" for Human Origin and Y-Screening.

For Item 4, all participants reported "Positive" for the presence of blood. For the presence of semen, all responding participants reported "Negative." For the presence of saliva, all but one responding participant reported "Negative." The remaining participant reported "Positive." Additionally, all participants reported "Positive" for Human Origin and Y-screening.

### DNA Analysis Results:

Of the 789 participants that returned results, 709 reported DNA results. Twenty-three participants stated that the samples were analyzed for database purposes only and fourteen selected the "No Interpretations" option individually for all interpretation questions.

For the Item 3 stain, the interpretation breakdown is as follows: all but seven participants included the victim (Item 1) and the suspect (Item 2) as possible contributors. The remaining seven participants reported "Inconclusive."

For the Item 4 stain, the interpretation breakdown is as follows: all participants that reported interpretations excluded the victim (Item 1) and included the suspect (Item 2) as possible contributors.

A total of 383 participants reported the use of Probabilistic Genotyping (PG) software on either solely the questioned items or all four items. The majority of participants reporting the use of PG software stated in their additional comments that stutter peaks may be included in the DNA results. Of these participants, nine were missing alleles compared to the consensus/predistribution results for one or more of the questioned items. Based on the interpretations described above, these inconsistencies did not appear to affect participants' conclusions.

Amplification kit-based trends were noted in this test. The trends for only the single source, known standards are discussed below as the trends are similar for the questioned items that were prepared from the same donors as the knowns.

For Item 1 at locus SE33, a total of 339 participants (~57%) reported "18,28.2." Of these, 327 participants (~96%) reported the use of GlobalFiler™. Additionally, a total of 249 participants (~42%) reported "17.1,28.2." Of these, 147 participants (~59%) reported the use of PowerPlex® Fusion 6C and 102 participants (~41%) reported the use of Investigator.

For Item 2 at locus D10S1248, a total of 564 participants (~86%) reported "14,15." There was no apparent trend seen between this result and the amplification kit used. However, a trend was seen with the 94 participants (~14%) that reported "15,15." All of these participants reported the use of the Investigator kit.

A significant portion of participants noted the discordant results in their additional comments and identified the discordant alleles as a possible high stutter event or a potential primer binding mutation. Overall, these inconsistencies did not appear to affect participants' conclusions.

## Key for Screening Tests Used

Participants were asked to use, where possible, the following chart of abbreviated screening test names. This was not an all inclusive list and was not designed to determine what tests should be performed. Participants were advised that tests not on this list may be used for screening.

Test	Abbreviation
Acid Phosphatase	AP
Kastle Meyer	KM
Leucomalachite Green	LMG
Microscopic	Micro
Ortho-tolidine	O-tol
Phenolphthalein-Tetramethyl benzidine	PTMB
Prostate Specific Antigen	PSA
Quantiblot	QB
Quantifiler	QF
Tetramethyl benzidine	TMB

# Serology Screening Results

*Indicate the results of any screening tests performed on the questioned stains (Items 3 & 4).*

Participants analyzing DNA for database purposes only: 23

## **Additional Comments**

TABLE 8

WebCode	Additional Comments
24CD8E	for item #3 - peaks had a significantly lower rfu value at TH01, drop out is unlikely, but a possibility, no other issues with other loci
24UD4P	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
26GMP6	As per [Laboratory] interpretation policies the DYS391 locus in the Fusion kit will be reported as INC. Any labeled peaks seen in samples FBPT22-00066_3_1.2_pshts1_BL and FBPT22-00066_4_1.2_wptss1_BL that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons.
28HL2J	Reporting with stutter filters on
28MW73	Male Screening was performed on items 3 and 4 using the Plexor HY quantification kit.
29UDY7	Reporting with stutter filters on.
29YAMP	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
2CMFTF	Item 3 - D2S1338 is not suitable for mixture statistics due to allele (21) being under interpretational threshold.
2GA4E7	Team approach used. Male screening processing and interpretation only.
2LPKZG	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks. Every allele given weight as a possible true allele during the probabilistic genotyping deconvolution that is present in the table in the STRmix output file was reported. This includes any potential stutter peaks that maybe have been given weight during the development of the genotype probability distribution table. This analyst was not proficient in serology at this time. Thus, all evidence proficiency samples were extracted on the Hamilton extraction platform.
2MKYVM	Items 1 and 3 were also amplified using MiniFiler. The GlobalFiler and MiniFiler results were concordant.
2PHMQA	Item 3 is reported as inconclusive due to the presence of multiple sequences. This laboratory does not interpret mixtures for mtDNA.
2VWNHE	NA= Not applicable
33PW3Q	Reporting STRmix results with stutter filters on
36NARC	NR = No Result
379MVG	This analyst was not proficient in serology at this time. Screening tests were not performed. All evidence proficiency samples were extracted with the non-differential method.
3B848B	Evidence profiles were interpreted using a probabilistic genotyping approach. STRmix software was used to aid interpretation, which includes biological modelling for forward and reverse stutter. Any allele included in a proposed, weighted genotype combination in the STRmix output was reported in the DNA Results tables of this form. This approach may result in at least one stutter peak being included in the DNA Results tables.

TABLE 8

WebCode	Additional Comments
3HFXPW	The results for Items 1 and 3 were reported as inconclusive for the SE33 locus because of the following non-concordance in the genotypes obtained with two different amplification kits. ITEM 1 SE33 GLOBALFILER = 18,28.2; FUSION 6C = 17.1,28.2. ITEM 3 SE33 GLOBALFILER = 18,26.2,27.2,28.2; FUSION 6C = 17.1,26.2,27.2,28.2.
3JQQN6	NR = No results
3MF77D	Items 2 & 4: Possible elevated N-4 stutter or primer binding site mutation at D10S1248. In order to determine which of these is the actual cause, a secondary autosomal amplification kit with different primers than the Investigator 24plex QS kit would be needed; however, are not available to this analyst. Item 3: Could also be impacted by the elevated N-4 stutter or primer binding site mutation at D10S1248 since the suspect (Item 2) is included as a possible contributor and it is expected that this same issue would be present. If this was casework and a primer binding site mutation was suspected, the sample(s) could be sent to our convicted offender database laboratory for amplification with a different amplification kit, such as GlobalFiler. Also in casework, if either sample was entered into CODIS, and this was primer binding site mutation at D10S1248, the sample should still produce a moderate stringency match and the analyst would need to manually evaluate the sample.
3UR2BU	Only serology performed.
3UYRBW	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
3VMWG4	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. DYS391 is reported as INC for the PowerPlex® Fusion System as per laboratory policy
42VLTA	[Name] performed the screening portion of the exam. [Name] performed the DNA analysis portion of the exam. Biology was reviewed by [Name]. DNA was reviewed by [Name].
48FHLD	NR = no result (for item 1 STR data table). INC = inconclusive (for item 3 mtDNA data table). Team approach used.
4AHK32	No interpretation - only known samples tested. There are no evidentiary items for comparison at this time. [Laboratory] will retain the mitochondrial DNA profiles for [Laboratory Specific Item Designation] (Item 1) and [Laboratory Specific Item Designation] (Item 2) if at any point evidentiary samples should become available for comparison.
4BWVA8	Reporting results with stutter filters on.
4FLKL4	NR=no results
4G8XPA	The probabilistic genotyping software, STRmix, was used for DNA interpretation. All potential alleles considered during deconvolution have been reported. D10 was ignored during the deconvolution of Items 3 and 4 - the alleles called during data analysis are reported.
4RNAMK	Y-Screening performed on items 3 and 4. Rapid DNA with ANDE on item 1 with FlexPlex 27. Note: Inclusions and exclusions were conducted by the analyst outside of the STRMix software program. STRmix was used to calculate the following propositions: Item3 : 1s2s/2sU; Item 4: 2s_U. Per [Laboratory] policy, STRmix would not be run in casework for item 4 as this item belonged to 2s and not required. Statistic run for PT purposes only. NID = No Interpretable Data.
4TD9EH	Non-concordance between kits at SE33 in Items 1 and 3.
4WCKD4	A team approach was used.
4WDBRY	Reporting results with stutter filters on.

TABLE 8

WebCode	Additional Comments
4ZYC9L	NID = No interpretable Data. Modified Rapid DNA analysis was conducted on items 1 and 2 using the ANDE Rapid DNA System and I-Chip with FlexPlex chemistry (item1) and RapidHIT ID System and ACE GlobalFiler Express cartridge (item 2). All inclusions and exclusions were conducted by the analyst outside of the STRmix software program. STRmix was used, however to calculate a likelihood ratio on the following propositions: Item 3 - 1s2s_2sU, Item 4 - 2s_U.
63J2WQ	Reporting STRmix results with stutter filters on
67GUH9	Mixtures are reported as INC. NR/NE means No results/ not expected. N/A mean Not applicable/ not amplified.
6LXRZF	NR - no result
6TQXKG	reporting with stutter filters on
76EMQZ	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the Powerplex Fusion System as per laboratory policy.
7DYWKA	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
7KZ7V9	ND = Not Detected
7LRWUE	NR = no result
7UEYUW	ND=Allele(s) not detected. NT=Locus not tested.
7W6692	Two discordant results were seen for the known standards when compared to the evidence. The evidence samples (3.1 and 4.1) were amplified in GlobalFiler, while the known samples (1.1 and 2.1) were amplified in 24plex. At SE33 for known sample 1.1, SE33 was called a 17.1,28.2 while based on comparison to the evidence sample 3.1, the types at that location indicated an 18,28.2. In addition, for known sample 2.1 at D10, imbalance (below 30%) of the 14 compared to the 15 allele was seen, while comparison to evidence sample 4.1, the 14,15 were seen balanced (greater than 60%). Inclusions will still be reported as needed ignoring SE33 for known sample 1.1 and D10 for known sample 2.1. No results will be reported for known sample 2.1 at D10, as the locus would not be used if seen in traditional casework. The 24plex results of 17.1,28.2 for SE33 will be reported. These results will not be considered discrepancies.
7YJWUB	NR denotes no results. This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the de-convolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results.
827TXU	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
82LE6B	[ ] - Indicates minor allele/s and alleles between analytical and stochastic thresholds. N/A - Not Applicable.
82MEJD	NR=No result
86MPED	NR - no interpretable results

TABLE 8

WebCode	Additional Comments
89C6NR	1) Extraction: Item 1 and Item 2 were extracted using in-situ method. Item 3 and Item 4 were extracted using the DNA IQ kit on Tecan Freedom Evo 150. 2) Quantification: Item 3 and Item 4 were quantified using ABI Quantifiler Trio DNA Quantification kit on ABI QuantStudio 5 Real-Time PCR System. 3) Amplification: Item 1 and Item 2 were amplified using GlobalFiler Express PCR Amplification Kit on ABI ProFlex PCR System. Item 3 and Item 4 were amplified using GlobalFiler PCR Amplification Kit on ABI GeneAmp PCR System 9700. Item 2, Item 3 and Item 4 were further amplified using AmFISTR Y-Filer PCR Amplification Kit on ABI GeneAmp PCR System 9700. 4) Electrophoresis: Electrophoresis was carried out on Genetic Analyzer 3500xL for Item 1, Item 2 (GlobalFiler Express), Item 3 and Item 4 (GlobalFiler). Electrophoresis was also carried out on Genetic Analyzer 3500xl for Item 2, Item 3 and Item 4(Y-Filer). 5) Quality Control: Reagent blank, Positive Control and Negative Control were carried out through analysis and all gave intended results. 6) NM represent Non-male profile.
8ECWB3	Item #3 - Peaks had lower RFU values at D10S1248 and D2S1338, drop out is unlikely, but a possibility, no other issues with other loci. D16, TPOX, TH01, D22, D5, D12 are not suitable for comparison under our current protocol.
8GVX7N	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
8JWPWV	Reporting results with stutter filters on.
8KGVK7	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
8V924X	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the PowerPlex Fusion system as per laboratory policy.
8W99UB	Mitochondrial DNA testing and Y-STR testing are not performed at this laboratory. STR analysis was performed with stutter filters on.
8YCQQZ	Reporting with stutter filters on.
9A6K83	NR = no result(s) detected. For items interpreted with STRmix, the Globalfiler STR results include all possible alleles for all interpreted genotypes. This may incorporate stutter peaks that would have been filtered during conventional analysis.
9FACPC	reporting with stutter filters on
9FT6D4	Item 3 is being reported as inconclusive due to an observed mtDNA mixture. This laboratory does not interpret mtDNA mixtures.
9NLJ9M	Reporting STRmix results with stutter filters on
9P4FY2	Reporting results with stutter filters on.
9RAXXW	Concerning the Item 1, the SE33 locus give different results depending the kit used (17.1, 28.2 -Fusion 6C) and (18,28.2-Globalfiler).

TABLE 8

WebCode	Additional Comments
9WEB96	The probabilistic genotyping software, STRmix, was used for DNA interpretation. All potential alleles considered during deconvolution have been reported. In addition, data associated with the D10S1248 locus in Items 2, 3, and 4 was reported, despite the locus indicating a possible null 14 allele and being omitted from the STRmix interpretation. Data reported for Items 3 and 4 at this locus is unedited to include peaks called in stutter position.
9WJ4PW	DYS391 is reported INC for all samples tested using PowerPlex® fusion kit per laboratory policy. Any labeled peaks that are likely due to PCR/STR artifact were not reported and will not be used for conclusions or comparisons.
9YEL46	The probabilistic genotyping software, STRmix, was used for DNA interpretation. All potential alleles considered during deconvolution have been reported. Item 2 - The data associated with D10 locus in Item 2 was reported, despite the locus being omitted from the STRmix LR from previous calculations for Items 3 and 4. This locus was omitted due to possible unconfirmed elevated stutter and/or a primer binding site mutation. Item 3 - In addition, the data associated with the D10 locus in Item 3 was reported, despite the locus being omitted from the STRmix interpretation, based on sequential unmasking due to a single locus exclusion. Item 4 - In addition, the D10 locus was omitted for the LR from previous calculations using STRmix, due to the above noted Item 2, D10 locus unconfirmed anomaly.
A8HNQU	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
A9QFBP	The results for Items 1 and 3 were reported as inconclusive for the SE33 locus because of the following non-concordance in the genotypes obtained with two different amplification kits. ITEM 1 SE33 GLOBALFILER = 18,28.2; FUSION 6C = 17.1,28.2. ITEM 3 SE33 GLOBALFILER = 18,26.2,27.2,28.2; FUSION 6C = 17.1,26.2,27.2,28.2.
A9UZF7	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect. This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry.
AANPFT	Male screening was performed on item 3 (pos for male DNA) and item 4 (pos for male DNA) using the Plexor HY quantification kit.
ABWWQ9	NA= Not applicable. INC= inconclusive. Missing Persons Unit reports mixtures as INC. NR/NE= no result/ not expected.
AQ922D	NR=No Results. This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results
ATV6VY	reporting with stutter filters on

TABLE 8

WebCode	Additional Comments
AUD2B6	This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry. High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect.
B2NPKX	Interpretation only performed by this analyst. Male Screening and DNA STR analytical testing performed by another analyst (team).
BBULAV	DYS391 is reported as INC as per laboratory policy. Any labeled peaks seen in samples that are likely due to PCR/STR artifact were not reported.
BDNUU4	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
BHA8JZ	INC = inconclusive. MtDNA results for item 3 are a mixture of more than one contributor. The data are reported as inconclusive but can be used for exclusionary purposes. NA = not applicable.
BMLA6V	A mixture of DNA was obtained from item 3. Any labeled peaks that are likely due to PCR/STR artifacts were not reported. DYS391 is reported as INC per lab policy.
BTFJZ9	N/A - Not Applicable
BU8864	This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry. High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect.
BUJ629	Items 3 and 4 were not processed for STR or YSTR analysis. Items 1 and 2 were processed for STR/YSTR database purposes only. 042222[Initials]. Items 1 through 4 were processed for mtDNA analysis. 042222[Initials]. A mixture mtDNA profile was obtained from item 3 and the data is not reported because [Laboratory] does not have a validated protocol for deconvolution of a mixed mtDNA profile. Since item 3 is not reported, no interpretations can be made between items 1 and 3 and items 2 and 3. 042222[Initials]. A serological evaluation was not performed on items 3 and 4 as it is not necessary to determine the method of processing for mtDNA analysis. 042222[Initials].
C3KDK8	NR = No results
C4DWDD	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).

TABLE 8

WebCode	Additional Comments
C6LVP8	The laboratory does not provide an allele table in the report, therefore, this procedure is used only for reporting the results of proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for the evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotypes are listed for reference samples, and 99% weighted alleles present are listed for evidence samples.
CC3PMP	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
CCK3AV	Reporting with stutter filters on
CDFYXB	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
CDQR4R	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. DYS391 is reported as INC for the PowerPlex Fusion System as per laboratory policy.
CM7K49	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
CMEM6T	DYS391 is reported as INC for all Powerplex Fusion results as per lab policy. Any peaks seen in item 3 not from Suspect or victim are likely PCR/STR artifacts, were not reported and will not be used for conclusions or comparisons. The minor peaks indicated in Item 4 are likely PCR/STR artifacts.
CNUQTT	Item 3 is being reported as inconclusive due to an observed mtDNA mixture. This laboratory does not interpret mtDNA mixtures.
CPQR4W	NR = no results. N/A = not applicable.
CVWWB	ND: Allele(s) not detected
D3GJQL	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
D9MCKG	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
DC3EF9	NR = No result
DFUJXQ	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. DYS391 is reported as INC for all samples tested per lab policy.
DJJMQ3	This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results. "NR" in that allele table(s) [Table 2: STR Amplification Kit(s) & Results] denotes "no results."
DQVAER	For all samples tested, any labeled peaks that are likely due to PCR/STR artifact were not reported. DYS391 is reported as INC for all samples tested as per laboratory policy.
DTQRRE	NR=No result

TABLE 8

WebCode	Additional Comments
DX7JG2	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
DYU7MA	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
E4LTVN	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true peaks being reported as possible allele(s).
E7LG7X	NR = no result. For items interpreted with STRmix, the GlobalFiler STR results include all possible alleles for all interpreted genotypes. This may incorporate stutter peaks that would have been filtered during conventional analysis.
E93XRX	NR = No Result. The DNA analyst only performed KM testing in the Screening Portion [Table 1: Serology Screening Results] of this test. A qualified forensic biologist performed all other screening tests, including male screen.
E9Q6LN	a) Extraction: Item 1 & Item 2 were extracted using in-situ method. Item 3 & Item 4 (bloodstains) were extracted using Promega DNA-IQ Purification Kit via TECAN Freedom EVO® HID EVOlutionTM Platform. b) Quantification: Item 3 & Item 4 were quantified using Quantifiler Trio DNA Quantification Kit on RTPCR QuantStudio 5. c) Amplification: Item 1 & Item 2 were amplified using GlobalFiler Express (GFE) Kit on ABI Proflex PCR System. Item 3 & Item 4 were amplified using GlobalFiler STR Kit on ABI GeneAmp PCR System 9700. Y-STR amplification was carried out on Item 2, Item 3 & Item 4 using AmFLSTR Y-Filer kit on GeneAmp PCR 9700. d) Electrophoresis: Electrophoresis were carried out on ABI 3500xL Genetic Analyzer for Item 1 & Item 2 (GFE) and Item 3 & Item 4 (GF). Electrophoresis were carried out on ABI 3500xL Genetic Analyzer for Item 2, Item 3 and Item 4 (Y-Filer Kit). e) Quality Control: Reagent Blank, Positive Control and Negative Control were carried out through analysis and all gave intended results. NM: Non-male allele.
EALKZ7	Items 1 through 4 were only processed for mtDNA analysis. A serological evaluation was not performed on Items 3 and 4 as it is not necessary to determine the method of processing for mtDNA analysis. A mixed mtDNA profile was obtained from Item 3 and the data is not reported because we do not have a validated protocol for the deconvolution of a mixed mtDNA profile. Since Item 3 was not reported, no interpretation can be made between Items 1 & 3 and Items 2 & 3.
ECE46J	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
EEK6W3	***Analysis performed by a DNA Technician; therefore, no interpretation performed. A 14 peak was noted in samples 01-02-AA, 01-03-AA, and 01-04-AA at the D10S1248 locus. This peak is in a stutter position to the 15 allele and does not appear to pair with this allele; however, the appearance of the peak above published stutter ratios for the 24plex kit in all 3 samples may suggest that the 14 is actually an allele that may be imbalanced due to a mutation and not a stutter artifact. This peak is included in the provider form because the lab has no way to determine if it is allelic or an artifact.
EFFAKP	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).

TABLE 8

WebCode	Additional Comments
EFHYPL	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
EMTTF3	Missing Persons Unit reports mixtures as inconclusive(INC). NA means not applicable.
ETVMPX	Item 3 inconclusive due to multiple sequences observed in the results, and this laboratory does not interpret mixtures.
EWFMV7	Reporting with stutter filters on.
EZDDVP	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. In regards to PowerPlex Fusion results, DYS391 is reported as "INC" as per [Laboratory] interpretation policy.
F2EWM6	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
F2VTBX	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
F69QK7	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
F6D9H6	Differential extractions were not performed. Therefore, complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
F6GLGY	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
F7KUB7	Reporting with stutter filters on
F9DGT7	The 14 allele reported at D16S539 for Item 3 is defined per laboratory protocol as additional data not impacting the interpretation of results for the profile. This peak was further modeled probabilistically using STRmix to support this interpretation.
F9DRUX	This proficiency test was utilized for Y-STR purposes only. Item 1: No male detected in quantitation, therefore, no further analysis.
FBFQU6	Items 3 and 4 were not processed for STR analysis. Items 1 and 2 were processed for STR database purposes only. Items 1 through 4 were processed for mtDNA analysis. A serological evaluation was not performed on Items 3 and 4 as it is not necessary to determine the method of processing for mtDNA analysis. A mixed mtDNA profile was obtained from Item 3 and the data is not reported because we do not have a validated protocol for the deconvolution of a mixed mtDNA profile. Since Item 3 is not reported, no interpretation can be made between Items 1 & 3 and Items 2 and 3.
FDPAZY	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).

TABLE 8

WebCode	Additional Comments
FFU6W4	This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry. High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect.
FQ7V2Y	1. Item 1 and Item 2 were extracted using in-situ method while Item 3 and Item 4 were extracted using Chelex extraction method. 2. Item 3 and Item 4 were quantified using Quantifiler Human DNA Quantification Kit on the Applied Biosystem Real Time Polymerase Chain Reaction (PCR) 7500 System. 3. Item 1 and Item 2 were amplified using AmpFLSTR Identifiler Direct PCR Amplification Kit while Item 3 and Item 4 were amplified using AmpFLSTR Identifiler Plus PCR Amplification Kit on 9700 GeneAmp PCR System. Y-STR (Y-Short Tandem Repeat) amplification was carried out on Item 2, Item 3 and Item 4 using AmpFLSTR Y-Filer PCR Amplification kit on the 9700 GeneAmp PCR System. 4. Electrophoresis was carried out on the Applied Biosystems 3500xl Genetic Analyzer with GeneMapper ID-X Software for Item 1, Item 2, Item 3 and Item 4. 5. Reagent blank, positive control and negative control were analyzed throughout the analysis and all gave the intended results.
G3DX3M	A mixture of DNA was obtained from sample questioned stain from suspect's shirt (pink). Any labeled peaks that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. Any labeled peaks seen in the sample questioned stain from suspect's pants (off-white) that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. As per laboratory protocol, DYS391 was deemed INC.
GDJEUX	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
GHUYV7	Possible non-concordance at SE33 (17.1 in Fusion 6C; 18 in Globalfiler) between Item 1 amplified with PowerPlex Fusion 6C and Item 3 amplified with Globalfiler.
GJTGAZ	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
GTE8RZ	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
H98QT2	The laboratory does not provide an allele table in the report, therefore, this procedure is used only for reporting the results of proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for the evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotypes are listed for reference samples, and 99% weighted alleles present are listed for evidence samples.

TABLE 8

WebCode	Additional Comments
H9PXYJ	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
HCHE3R	NR = No Results
HGEJ6G	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
HKJNQX	This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry. High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect.
HWDJ6X	DNA training is currently in progress and has not been completed. Only serology results have been submitted at this time.
HXMYAD	Reporting STRmix results with stutter filters on
HXNDWQ	NR = No Result
JBQ4C4	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
JDFYR6	MiniFiler was also used to amplify item 4. Concordant results were obtained with GlobalFiler and MiniFiler.
JDYD7L	NR = no result
JEPJKR	The victim has no interpretations for either item because the victim known was not processed for DNA. This test was used for YSTR testing only and the victim is listed as female.
JEQE4X	The laboratory does not provide an allele table in the report, therefore, this procedure is used only for reporting the results of proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for the evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotypes are listed for reference samples, and 99% weighted alleles present are listed for evidence samples
JFLRUW	NA=Not applicable
JGU6EJ	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
JH4QQK	Only Analytical DNA was performed on items 1,2,3 and 4. Alleles were entered with stutter filters on since probabilistic genotyping was not completed for this test.
JJ27YB	Reporting STRmix results with stutter filters on

TABLE 8

WebCode	Additional Comments
JKFR87	INC= inconclusive. NID = no interpretable data/no result. Note: inclusions and exclusions were conducted by the analyst outside of the STRmix software program. STRmix was used, however, to calculate a likelihood ratio on the following propositions: Item 3 1s2s_2sU; Item 4 2s_U. Modified Rapid DNA analysis was conducted on items 1 and 2.
JLTFAJ	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
JLZFXR	NR = No Results. For items interpreted with STRmix, the GlobalFiler STR results include all possible alleles for all interpreted genotypes. This may incorporate stutter peaks that would have been filtered during conventional analysis.
JP6WFV	NA=Not Applicable/Not Tested. INC=Inconclusive. NR/NE=No Result/Not Expected. Missing Person's Unit reports mixtures as inconclusive (INC).
JPAL7T	NR = No Results. All screening tests performed by qualified forensic biologist. Male screen screening test interpreted by reporting analyst. KM testing done on sample 1 by reporting analyst. Results positive.
JQHZDY	GMIDX analysis performed with stutter filters on. Mitochondrial and Y-STR DNA analysis not performed in this laboratory.
JRTLLU	OL allele at SE33 in item 3 and item 1 (confirmed by reinjection and STRbase checked)
JWKL7G	Item 3: Male DNA was detected on this item utilizing the Plexor HY Quantification kit. Item 4: Male DNA was detected on this item utilizing the Plexor HY Quantification kit.
K2VYJA	Reporting STRmix results with stutter filters on
K7EGYQ	The victim (Item 1) has no interpretations for either Item 3 or Item 4 because the victim known was not processed for DNA. This test was used for YSTR testing only and the victim is listed as female.
K7R724	This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results. NR = No Results
K9AYNK	For powerplex fusion results, DYS391 is reported as INC, as per our laboratory policy.
K9UGPL	Item 3 is reported as inconclusive due to the presence of a mixture. This laboratory does not interpret mtDNA mixtures.
KCGNHZ	This lab doesn't perform Y-STR testing or mtDNA testing and reports samples with stutter filters on.
KDNU9N	INC = inconclusive due to mixture; NA = not applicable/not tested. mtDNA results for item 3 are a mixture of more than one contributor. The data are reported as inconclusive but can be used for exclusionary purposes. Autosomal and Y-STR testing were not conducted.
KHF2RW	NA= NOT APPLICABLE
KKBPYD	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
KL3HK4	Item 4 was amplified with both Globalfiler and Minifiler. Concordant results were obtained with Globalfiler and Minifiler.
KL6DG9	Y-STRs and mitoDNA are not preformed at the [Laboratory].

TABLE 8

WebCode	Additional Comments
KQBUAP	reporting results with stutter filters on
KR7MXV	INC=Inconclusive. mtDNA results for item 3 are a mixture of more than one contributor. The data are reported as inconclusive but can be used for exclusionary purposes.
KV2BD3	Discordance observed at SE33 between amp kits in Items 1 and 3.
KWERQF	{ } = peak height imbalance. SE33 locus is inconclusive for Items 1 and 3 because of the following non-concordance: Item 1 SE33 Globalfiler= 18,28.2; Fusion 6C= 17.1,28.2. Item 3 SE33 Globalfiler= 18,26.2,27.2,28.2; Fusion 6C= 17.1,26.2,27.2,28.2.
KXWMNA	Reporting STRmix results with stutter filters on
LA8XNP	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
LBHXPQ	Male Screen testing was performed on a sample from each of item #3 and #4 by a qualified forensic biologist. The DNA analyst reviewed and interpreted the male screen results. KM testing was done by both the forensic biologist and the DNA analyst. Other serological tests were done by the forensic biologist. NR = No Result.
LD7CDZ	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
LHBLCB	Only serology performed.
LHXAFR	INC=Inconclusive, MP unit does not interpret mixtures. NR/NE=No Results/Not Expected. NA=Not Applicable/Not Amplified.
LHXZVM	Reporting with stutter filters on.
LMYHB9	The [Laboratory] does not test any additional loci and does not perform YSTR or mtDNA testing.
LNH89K	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. Per laboratory policy, the DYS391 locus tested in PowerPlex Fusion will not be interpreted or reported and will be marked "INC".
LPQRML	NR= No results
LR4ZAF	All evidentiary profiles that yield a mixture will be de-convoluted in STRmix to develop an advanced report. The Genotype Probability Distribution table from the STRmix Advanced Report will be used to complete the test provider's results table for these samples.
LR7B4H	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
LRL8FX	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
LTHFRM	For item 3: at locus D5S818, stutter peak in 11 position to parent 12 filtered out in analysis software.
M4ZZMP	Samples 3 and 4 were also amplified in the Identifier Plus kit using Low Copy Number conditions - results were consistent with the standard Identifier Plus results. Samples 3 and 4 were also amplified using the MiniFiler kit - results were consistent with the Identifier Plus results at the loci present in both kits. The YSTR results were not used in the interpretation.

TABLE 8

WebCode	Additional Comments
M8CE6H	Biology testing performed. Male screening preparation and male screening processing (analytical) testing performed.
M99UD9	Reporting STRmix results with stutter filters on.
MBW92J	Item 3: suspect's shirt: Analysis (drop out probability : 0.10); Prosecution hypothesis: Item 1 (victim) / Item 2 (suspect); Defense hypothesis: Item 2 (suspect) / 1 unknown. Match parameters: Probability of dropin: 0.05; Theta correction: 0.01. Results: Overall Likelihood ratio: 7,77E022.
MCUWJY	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
MG6MRU	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
MHUXHM	Reporting results with stutter filters on.
MLN22T	A team approach was used.
MLU9EM	Reporting results with stutter filters on.
MM7GK8	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
MRX7VE	The results for Items 1 and 3 were reported as inconclusive at the SE33 locus because of the following non-concordance in the genotypes obtained with two different amplification kits. ITEM 1: SE33 GLOBALFILER = 18,28.2; FUSION 6C = 17.1,28.2. ITEM 3: SE33 GLOBALFILER = 18,26.2,27.2,28.2; FUSION 6C = 17.1,26.2,27.2,28.2.
MRYW4H	*Items 2, 3 and 4 at D10S1248 a 14 peak was observed that could be very high stutter or a very low sister allele based on our validated parameters. This was first observed when analyzing samples 3 and 4. In sample 3 the mixture ratio was close to 1:1. The 14 peak was 21.4% of the 15 peak the expected stutter rate is approximately 10.4%. The height of the 14 would have been an indication of a third contributor which wasn't consistent with the rest of the mixture. The 14 could also be high stutter. Sample 4 was single source. The 14 was 23.4% of the 15, again expected is 10.4%. The total allelic peak height at D10S1248 seems low when compared to similarly sized loci. This could indicate a primer binding site mutation that is causing the 14 to not amplify efficiently. The 14 could also be high stutter. Sample 2- the 14 is 22.4% of the 15 allele. The total allelic product is more in line with what is being observed at similarly sized loci. Again this could be high stutter or some sort of amplification issue. Items 3 and 4 were differentially extracted. The sperm fraction from item 3 had a quant value and was amplified but no profile was obtained. The sperm fraction from item 4 did not have a quant value and was not amplified.
MVZ2VU	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
MW37NQ	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.

TABLE 8

<b>WebCode</b>	<b>Additional Comments</b>
NB7Q79	Only serology performed.
NBNUHE	*A potential anomaly was observed at the D10 locus in items #2, 3 and 4. A 14 peak was observed in each sample that may be a result of reproducibly elevated stutter or a potential primer binder site mutations of a sister allele. The 14 peak was observed between ~19% and 24% of the 15 allele, which falls within our possible elevated stutter range or just above it. When observing the peak height of the 15 allele compared to other loci in the same profile, it is very plausible that the 14 may also be the result of a primer binding site mutation. This would make the 14 allele a sister allele to the 15 and result in a genotype combination of 14,15. Since we are unable to confirm which anomaly it is, the genotype reported was just a 15 allele.
NC2U4U	[ ] - indicates minor allele(s) and/or allele(s) between analytical and stochastic thresholds. NA - indicates not applicable.
NDJBCP	The probabilistic genotyping software, STRmix, was used for DNA interpretation. All potential alleles considered during deconvolution have been reported.
NHMEPG	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the PowerPlex® Fusion System as per laboratory policy.
NQ7V4Q	ND = not detected
NTPFNF	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the PowerPlex® Fusion system as per laboratory policy.
NVX2HT	The laboratory does not provide an allele table in the report, therefore, this procedure is used only for reporting the results of proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for the evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotypes are listed for reference samples, and 99% weighted alleles present are listed for evidence samples.
NZFPAZ	MiniFiler was used to amplify items 3 and 4. Concordant results were obtained with GlobalFiler and MiniFiler at all shared loci.
P3NRXE	DYS391 locus was reported as INC for Fusion profiles for all samples as per Laboratory policy. Any labeled peaks that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions and comparisons.
P6XMUE	No interpretation - only known samples tested. There are no evidentiary items for comparison at this time. [Laboratory] will retain the mitochondrial DNA profiles for [Laboratory Specific Item Designation] (Item 1) and [Laboratory Specific Item Designation] (Item 2) if at any point evidentiary samples should become available for comparison.
PBQAX7	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
PF2UUX	Minifiler™ was also used to amplify item 4. Concordant results were obtained with GlobalFiler™ and Minifiler™ for this item.
PJ3GLM	item 3 and 4 were also analyzed using minifiler and LCN Identifiler Plus. The results from these tests were concordant with the Identifiler Plus reported here.

TABLE 8

WebCode	Additional Comments
PKZJKY	NR = No results. This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results.
PMUCP9	A discordant allele call was confirmed in the profiles obtained from Victim (Item 1) - CTS2240-0040-R-03a1 at the SE33 locus between the GlobalFiler kit (18, 28.2) and the PowerPlex Fusion 6C kit (OL 17.1, 28.2).
PN9R6V	Reporting with stutter filters on.
PP4L7Q	The laboratory does not provide an allele table in the report, therefore, this procedure is used only for reporting the results of proficiency tests. Probabilistic genotyping software was used to aid in the interpretation and statistical analysis of the DNA profiles generated. The results listed in the CTS report for the evidence samples reflect the possible alleles present that were given a weight of at least 99% of being a true allele. Therefore, some expected alleles may not be listed, particularly those that are in the stutter position. Genotypes are listed for reference samples, and 99% weighted alleles present are listed for evidence samples.
PTA6BE	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
PV82NG	No interpretation - only known samples tested. There are no evidentiary items for comparison at this time. [Laboratory] will retain the mitochondrial DNA profiles for [Laboratory Specific Item Designation] (Item 1) and [Laboratory Specific Item Designation] (Item 2) if at any point evidentiary samples should become available for comparison.
PVMK9E	No interpretation - only known samples tested. There are no evidentiary items for comparison at this time. [Laboratory] will retain the mitochondrial DNA profiles for [Laboratory Specific Item Designation] (Item 1) and [Laboratory Specific Item Designation] (Item 2) if at any point evidentiary samples should become available for comparison.
Q22PBK	For the sample containing DNA from Item 2 (male suspect), allele imbalance at the D10S1248 locus was observed in the original extraction and amplification as well as the re-extraction and amplification of the re-extract. Observed allele imbalance for the D10S1248 locus was 31.5% and 27.8, respectively, in the amplifications of Item 2. Allele imbalance was also observed in the evidence samples in which the suspect (Item 2) could not be excluded as a contributor to.
Q2F8C6	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
Q493WT	NR = No Results. Male screening testing was performed by a competent Forensic Biologist and results analyzed by test participant DNA Analyst. Globalfiler Express testing was performed by a competent DNA Analyst and results analyzed by test participant DNA Analyst.
Q98HVU	1) Possible Primer Binding Site Issue for Item 1 and Item 3 at SE33 - non-concordance between GF and Fusion 6C/24plex kits - locus was not used for comparison. 2) Null Allele at D10 for Item 2 when using the 24plex kit - Fusion 6C data was reported and is listed in the table.

TABLE 8

WebCode	Additional Comments
Q9F9CE	Male screening was performed on Items 3 and 4 using the Plexor HY quantification kit. Information from the analysis was used to determine the presence of male DNA on Items 3 and 4. Item 3: Male DNA was detected on this item utilizing the Plexor HY Quantification kit. Item 4: Male DNA was detected on this item utilizing the Plexor HY Quantification kit. Evidence profiles were interpreted using a probabilistic genotyping approach. STRmix software was used to aid interpretation, which includes biological modelling for forward and reverse stutter. Any allele included in a proposed, weighted genotype combination in the STRmix output was reported in the DNA Results tables of this form. This approach may result in at least one stutter peak being included in the DNA Results tables.
QDLZ7J	NR=No Results
QDWUJK	On Sample 001-3A, at locus D18S51, there is a 19 peak that typed in the 1st amp but not in the second amp. This peak is likely stutter, but since high stutter peaks are left in for STRmix interpretations, the 19 peak was included in the list of "allelic results" for Item 001-3A.
QGPKMQ	Item 2: Penta E: 12 allele was below laboratory stochastic threshold, used brackets to indicate potential for drop out. D22: NA = no amplification.
QH2RRP	N/A: Not Applicable. [ ] - indicates minor allele/s and alleles between analytical and stochastic thresholds.
QJPUBD	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the PowerPlex Fusion System as per laboratory Policy.
QPJ7QN	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
QV422L	Item 3 is being reported as inconclusive due to an observed mtDNA mixture. This laboratory does not interpret mtDNA mixtures.
QWD7EA	Serology only proficiency test.
R2EU43	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
R36J9B	Reporting results with stutter filters on.
R687FZ	It should be noted that Amel and the male markers are not included in the STRmix interpretation for single source samples or mixtures. Additionally, for mixtures, SE33 and D1S1656 are not included in the STRmix interpretation but are included in the CTS report.
RH3J9Q	This test was performed by a DNA technician, who is authorized to perform forensic biology testing, extraction (EZ1/QIAcube) and quant (Plexor HY). No DNA interpretations will be made. Data was amplified by a qualified DNA analyst to check for accuracy. STRmix was used by the authorized DNA analyst for the purpose of obtaining a genotype table for data entry. High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the items are indigenous to the suspect.
RKWLFL	In relation to the interpretation of Item 3 and in relation to the Victim (Item 1), where the results were obtained, the Victim could be a contributor.

TABLE 8

WebCode	Additional Comments
RPWPQ7	Extraction: Item 1 and Item 2 were extracted using in-situ method. Item 3 and Item 4 were extracted using DNA IQ kit on Tecan Evo 150 platform. Quantification: Item 3 and Item 4 were quantitated using Quantifiler Trio DNA Quantification kit on QuantStudio 5 Real-Time PCR System. Amplification: Item 1 and Item 2 were amplified using GlobalFiler Express PCR Amplification kit on ProFlex PCR System. Item 3 and Item 4 were amplified using GlobalFiler PCR Amplification kit on GeneAmp PCR System 9700. Item 2, Item 3 and Item 4 were amplified using AmpFLSTR Y-Filer PCR Amplification kit on GeneAmp PCR System 9700. Electrophoresis: Item 1 and Item 2 (GlobalFiler Express) while Item 3 and Item 4 (GlobalFiler) were run on ABI 3500xL Genetic Analyzer. Item 2, Item 3 and Item 4 were run on ABI 3500xL Genetic Analyzer for Y-STR. Quality Control: Reagent blank, positive control and negative control were conducted throughout the analysis and given satisfactory results. NM represent Non-male profile.
RPZAT2	Possible drop out observed at TH01, D12S391, and D2S1338.
RT2TUL	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
RZX2CZ	NR = No Results
T4ZRHL	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
T67TTD	Per lab policy, DYS391 is reported as INC using the PowerPlex Fusion amplification kit. Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported.
T73VK8	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
TAWDNF	Discordant results observed between amplification systems for Items 1 and 2, results based on Investigator 24plex QS were reported for this proficiency: Item 1, SE33 called 17.1, 28.2 (Investigator 24plex QS) and 18,28.2 (GlobalFiler). Reported as 17.1,28.2. Item 2, D10S1248 14,15 <30% PHR (Investigator 24plex QS) and 14,15 >60% PHR (GlobalFiler). Result not reported as locus would not be used in traditional casework.
TFTL3U	NR=no results. This laboratory does not generate an allele table for the evidence sample results. Therefore this procedure is used only for reporting results for this proficiency test. Evidence results were interpreted using a probabilistic genotyping approach. With probabilistic genotyping analysis, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks reported as possible alleles, which would not affect the overall interpretation of the results.
TKH4EJ	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).

TABLE 8

WebCode	Additional Comments
TKQR9K	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
TTNF6G	NR = no results. NT = not tested.
TU7RET	Stutter filters are established by the laboratory based on validation data and used to filter stutter during examiner analysis. Additionally, the laboratory utilizes a probabilistic genotyping software for data interpretation which models stutter during its probabilistic analysis of the data. Elevated stutter peaks which are above the stutter filters established by the laboratory during the validation may still occur but are handled probabilistically during interpretation by the software. The results for this test contains an elevated stutter peak which is being reported to the vendor as an additional comment but which has been modeled as stutter probabilistically during interpretation at the following locus: Exhibit 3, vWA allele 14. Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component.
TULMUN	Within the data table for Item 1, NR = no results. Team approach used.
TUNCYK	NR/NE = No Results/Not Expected. INC = Inconclusive. NA = Not Applicable. The Missing Persons Unit reports mixtures as inconclusive; therefore, no interpretation was performed on Fusion results from Item 3 and no Fusion data comparisons were made between Item 3 and Items 1 and 2.
TVW4UZ	It should be noted that Amel and the male markers are not included in the STRmix interpretation for single source samples or mixtures. Additionally, for mixtures, SE33 and D1S1656 are not included in the STRmix interpretation but are included in the CTS report.
TY3TMG	Interpretation only performed by this analyst. Biology and Y-STR analytical testing performed by another analyst (team).
U3NCNK	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
U6K7WL	NA = Not applicable
U96ZTL	Since Item 1 did not indicate any male DNA during the quantitation step, it was not processed for YSTR amplification and CE; thus, no interpretations can be conducted for Item 1.
U9LMGP	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
U9PW2F	Forensic Biologist performed the screening tests and male screen benchwork. DNA analyst performed the analysis of the male screen test. Benchwork DNA analyst performed the KM testing. NR=No Results.
UCLXCP	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.

TABLE 8

WebCode	Additional Comments
UKE4U6	Extraction : 1) Item 1 and Item 2 were extracted using in-situ method. 2) Item 3 and Item 4 was extracted using Promega DNA IQ on Tecan Freedom EVO 150 platform. Quantification : Item 3 and 4 were quantified using Quantifiler Trio DNA Quantitation Kit on QuantStudio 5. Amplifications : 1) Item 1 and Item 2 were amplified using the GlobalFiler Express kit on Proflex PCR System. 2) Item 3 and Item 4 were amplified using the GlobalFiler PCR Amplification Kit on 9700 GeneAmp PCR System. 3) Item 2, Item 3 and Item 4 were also amplified using AmpFISTR YFiler kit on 9700 GeneAmp PCR System. Electrophoresis : Capillary electrophoresis on all amplified samples (Globalfiler Express, Globalfiler PCR and YFiler) were carried out on Genetic Analyzer 3500xL. Quality Control : Reagent Blank, Positive Control and Negative Control were carried out along with the analysis and all gave the intended results.
UMGB4A	Male Screening was performed on items 3 and 4 using the Plexor HY quantification kit
UNZDA3	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping, peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
UYE7CC	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported. DYS391 is reported as INC for all samples tested per laboratory PowerPlex Fusion Interpretation Policy.
V3QHJD	The results of the analysis shown item 3 found DNA from at least two individuals that were compatible with Victims (item1) and Suspects (item2). Item 4 found DNA profile compatible with the suspect (item2).
V9CDKG	Item 3 is being reported as inconclusive due to an observed mtDNA mixture. This laboratory does not interpret mtDNA mixtures.
VARMGN	Only serology performed.
VE8MZF	NR= no results. KM testing was performed by DNA analyst. All other screening tests performed by Forensic Biologist.
VFTYDL	INC = Inconclusive. Per [Laboratory] guidelines, mtDNA results for item 3 are a mixture of more than one contributor. The data are reported as inconclusive but can be used for exclusionary purposes only. No autosomal or Y-STR testing was performed.
VP84ZH	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
VQZKUL	Elevated stutter noted.
VUUFL9	ND- Allele(s) not detected.
W9DHHQ	non-concordance at locus SE33 between item 3 (allele 17.1) and item 1 (allele 18) (standard could not be ruled out at any other loci) locus ignored in STRmix
WENZ76	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
WGUXLL	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.

TABLE 8

WebCode	Additional Comments
WJJWQP	Differential extractions were not performed. Therefore complete lysis of the sperm cells for male contributors may not occur. This could result in a partial profile for a minor male component. Stutter filters are established by the laboratory based on validation data and used to filter stutter during examiner analysis. Additionally, the laboratory utilizes a probabilistic genotyping software for data interpretation which models stutter during its probabilistic analysis of the data. Elevated stutter peaks which are above the stutter filters established by the laboratory during the validation may still occur but are handled probabilistically during interpretation by the software. The results for this test contain(s) (an) elevated stutter peak(s) which is/are being reported to the vendor as an additional comment but which has/have been modeled as stutter probabilistically during interpretation at the following locus: CSF1PO allele 13 and D13S317 allele 14.
WL4RHN	Item 3 estimated mixture proportions - 60:40
WNCUFF	NR = no results. Screening tests performed by a qualified Forensic Biologist and samples transferred to DNA analyst per SOP. KM testing performed by Forensic Biologist (Item 3) and DNA analyst (Item 3 & Item 4); concordant results where applicable. The DNA analyst reviewed and interpreted the male screen results. #2 tested with GlobalFiler and GlobalFiler Express; concordant results generated.
WNV8WK	For item 3, at the locus D5S818, the 11 allele from the victim is in the stutter position, therefore not called. This locus was not used in the statistical calculation. The victim's alleles are fully represented in the rest of the profile.
WQBXMN	Each sample (ITEM 1-4) was tested with two different (autosomal) STR kit. In ITEM 1, autosomal assays showed a discordance at the SE33 locus. We detected 17.1/28.2 at the SE33 locus using PowerPlex Fusion 6C kit and 18/28.2 using GlobalFiler kit.
WVTJ4F	No interpretation undertaken for Yfiler Plus results. MiniFiler results obtained were concordant with Identifiler Plus results obtained.
WW8WLX	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
WYVB9M	KM testing performed by DNA analyst. Male screen testing analyzed by DNA analyst. NR=no results.
X37KE4	Male Screening was performed on items 3 and 4 using the Plexor HY Quantification Kit. Information from the analysis was used to determine the presence of male DNA on items 3 and 4. Item 3: Male DNA was detected on this item utilizing the Plexor HY Quantification Kit. Item 4: Male DNA was detected on this item utilizing the Plexor HY Quantification Kit.
XCTDYN	Non-concordance between kits at SE33 in items 1 and 3.
XD7AUY	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
XHK4BW	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
XJ6NRE	Missing Persons Unit reports mixtures as INC (inconclusive). NA = Not Applicable. NR/NE = no result/not expected.
XMCBT6	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).

TABLE 8

WebCode	Additional Comments
XU7WPZ	Only serology performed.
XZY8TW	Reporting STRmix results with stutter filters on.
Y93QJ6	Any labeled peaks seen in samples that are likely due to PCR/STR artifacts were not reported and will not be used for conclusions or comparisons. DYS391 is reported as INC for the PowerPlex Fusion system as per laboratory policy.
Y9N3GJ	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
YAJTF7	Male Screening was performed manually on items 3 and 4 utilizing the Plexor HY Quantification kit. DNA Analytical for items 1-4: manual extraction and purification using QIAamp DNA Mini Kit, manual quantification with Quantifiler Human, manual amplification with 24 Plex Amplification Kit, and Capillary Electrophoresis with 3500xl. Alleles were entered with stutter filters on since probabilistic genotyping was not completed for this test.
YCUUZX	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
YE6PTG	I have not completed DNA training and only serology results have been submitted.
YK2XHG	4/11/22 [Initials]: Interpretations for Victim (Item 1) are inconclusive. No male DNA was detected from quantification and the victim is female. The analysis of this sample stopped based on quant results, since only Y-STR analysis was completed for the evidence samples.
YNHPMB	[Name] performed biology screening. [Name] performed DNA lab work and interpretation. [Name] performed tech review of the CTS data entry for biology and [Name] performed tech review of the CTS data entry for DNA. Item 3: The Infrared (IR) Light was used as an investigative aid and indicated stain(s) of potential evidentiary value. Presumptive testing with Luminol and Phenolphthalein indicated the possible presence of blood. This test alone does not confirm the presence of blood. Item 4: Confirmatory testing for hemoglobin with HemDirect disclosed the presence of blood of probable human origin. The HemDirect test is not considered a confirmatory test for species (it is considered confirmatory for blood), due to the fact that some upper primates and under some conditions, ferrets, have been reported giving positive results with the HemDirect card. The amylase diffusion test is a presumptive test for the presence of amylase (an enzyme found in body fluids, including saliva).
YVWJKZ	The results for Items 1 and 3 were reported as inconclusive for the SE33 locus because of the following non-concordance in the genotypes obtained with two different amplification kits. ITEM 1 SE33 GLOBALFILER = 18,28.2; FUSION 6C = 17.1,28.2. ITEM 3 SE33 GLOBALFILER = 18,26.2,27.2,28.2; FUSION 6C = 17.1,26.2,27.2,28.2.
Z44F3C	Item 3 is being reported as inconclusive due to an observed mtDNA mixture. This laboratory does not interpret mtDNA mixtures.
Z72BVK	Y-screening conducted only. DNA analysis was not performed. Male DNA was detected on items 3 and 4.
Z76PTF	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.

TABLE 8

WebCode	Additional Comments
Z8D2BG	The results reported for Items 3 and 4 were generated using probabilistic genotyping. All alleles deemed possible for any contributor are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in stutter peaks being reported as allelic. Per laboratory protocol the Y-STR markers (DYS391, DYS570 and DYS576) are not used for interpretation other than to determine if at least one male contributor is present. Therefore, for these loci all peaks above the analytical threshold, stutter or allelic, will be reported. Laboratory policy allows for analyst discretion, based upon training and experience, in the selection of screening tests being performed.
Z967EN	Y-screening conducted only on item 3 and item 4. Male DNA was detected on item 3 and item 4.
ZBNRZD	A team approach was used for screening.
ZDZ77K	NR = No Results
ZGV8P2	The results for Items 1 and 3 were reported as inconclusive for the SE33 locus because of the following non-concordance in the genotypes obtained with two different amplification kits. ITEM 1 SE33 GLOBALFILER = 18,28.2; FUSION 6C = 17.1,28.2. ITEM 3 SE33 GLOBALFILER = 18,26.2,27.2,28.2; FUSION 6C = 17.1,26.2,27.2,28.2.
ZL4TBD	NR = No results. GlobalFiler and Yfiler were performed on Items 1 - 4. Results were concordant at DYS391.
ZLRG4E	[ ] - indicates alleles between analytical and stochastic thresholds. N/A = not applicable.
ZNK8DZ	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor based on the >99% genotype weightings are being reported. With probabilistic genotyping peaks in stutter position are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible allele(s).
ZQN3UG	Reporting with stutter filters on. Mitochondrial DNA and Y-STR's not performed at this laboratory.
ZZD2VH	High stutter was noted at D10 for Item 2 (Known blood from suspect) and it is suspected that this is inherent to this contributor at this locus. However, there is the possibility that this could be an imbalanced heterozygote pair due to basepair variation at the primer binding site. This could also affect items 3 (shirt) and 4 (pants) since the suspect cannot be excluded from these DNA profiles.
ZZDYAK	NR= No Results

-End of Report-  
(Appendix may follow)

**Collaborative Testing Services ~ Forensic Testing Program**

**Test No. 22-5702: Forensic Biology**

**DATA MUST BE SUBMITTED BY May 2, 2022, 11:59 p.m. TO BE INCLUDED IN THE REPORT**

Participant Code: U1234A

WebCode: HJLU6R

The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

**Scenario:**

Police have been called to a local bar to investigate a physical assault involving a female victim and male suspect. Upon arrival the victim tells police that the suspect hit her several times after she declined his advances. The suspect denies this claim and accuses the victim of hitting him. Police have noted injuries only on the victim. Investigators are submitting a stain from the shirt (Item 3) and a stain from the pants the suspect was wearing (Item 4). Also provided are known standards from the female victim (Item 1) and male suspect (Item 2).

**Items Submitted (Sample Pack B2):**

Item 1: Known blood from the female victim

Item 2: Known blood from the male suspect

Item 3: Questioned stain from suspect's shirt (pink)

Item 4: Questioned stain from suspect's pants (off-white)

## Part I: SCREENING TESTS

**Note:** Laboratories submitting their results for ASCLD/LAB or NATA accreditation **MUST** identify any screening tests performed and report the test results.

Indicate the results of any screening tests performed on the questioned stains (Items 3 & 4).

Please use the abbreviations listed in this response key to fill in the Screening Test tables on this tab. This is not an all inclusive list of tests, and should not be used to determine what tests should be performed.

TESTS NOT ON THIS LIST MAY BE USED FOR SCREENING.

Test	Abbreviation	Test	Abbreviation
Acid Phosphatase	AP	Alternate Light Source	ALS
Kastle Meyer	KM	Leucomalachite Green	LMG
Microscopic	Micro	Ortho-tolidine	O-tol
Phenolphthalein-Tetramethyl benzidine	PTMB	Prostate Specific Antigen	PSA
Rapid Stain Identification	RSID	Tetramethyl benzidine	TMB

Example:	Positive	Negative	Inconclusive	Not Tested	Test(s) Performed
Blood	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	KM, O-tol, PTMB
Semen	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	PSA

## *Part II: DNA Results for Known Item 1*

- Report alleles in numerical order, separated by a comma.
  - Follow your laboratory procedures for reporting homozygotes (i.e. X,X or X) and null responses.
  - If your laboratory policy is to indicate minor or weaker alleles, please enclose them within brackets [ ].

**STR Amplification Kit(s) Used:** Please check all the brands that apply for this item and record only additional kit specific information in the blank provided (i.e. 16, Plus, Direct, HS, Fusion, etc.).

### Part III: DNA INTERPRETATION

Based on results obtained from DNA analysis, could the Victim (Item 1) and/or the Suspect (Item 2) be a contributor to the questioned stains (Items 3 & 4)?

		<u>Victim (Item 1)</u>		<u>Suspect (Item 2)</u>	
		Item 3	Item 4	Item 3	Item 4
Yes	<input type="radio"/>	<input type="radio"/>		<input type="radio"/>	<input type="radio"/>
No	<input type="radio"/>	<input type="radio"/>		<input type="radio"/>	<input type="radio"/>
Inconclusive	<input type="radio"/>	<input type="radio"/>		<input type="radio"/>	<input type="radio"/>
No Interpretation	<input type="radio"/>	<input type="radio"/>		<input type="radio"/>	<input type="radio"/>

DNA interpretations not reported; samples analyzed for database purposes only:

### Part IV: ADDITIONAL COMMENTS

- Use this section to report comments regarding any part of this test.
- Written conclusions (including statistical information) for DNA analysis are not required.
- Any interpretations based on the results obtained should be indicated in the section above.
- Note: Laboratories submitting their results for accreditation are asked to report any additional information that will assist in the review of their results. This includes an explanation of any deviations from a full completion of the test and/or unique findings such as elevated stutter.

**Please note:** Any additional formatting applied in the free form space below will not transfer to the Summary Report and may cause your information to be illegible. This includes additional spacing and returns that present your responses in lists and tabular formats.

## RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section below must be completed.)
- This participant's data is **not** intended for submission to ASCLD/LAB, ANAB, and/or A2LA.

Have the laboratory's designated individual complete the following steps  
only if your laboratory is accredited in this testing/calibration discipline  
by one or more of the following Accreditation Bodies.

### Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory

ANAB Certificate No.  
(Include ASCLD/LAB Certificate here)

A2LA Certificate No.

### Step 2: Complete the Laboratory Identifying Information in its entirety

Authorized Contact Person and Title

Laboratory Name

Location (City/State)
