This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample set consisted of two known bloodstains on FTA™ Micro Cards (Items 1 & 2), and two questioned stains on colored fabric (Items 3 & 4). Participants were requested to analyze these items using their existing protocols.

**SAMPLE PREPARATION:** The stains on Items 1, 2, and 4 were prepared from human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. The stain on Item 3 was a mixture prepared from human whole blood and semen. Item 1 (75  $\mu\text{L}$ ) was created using blood collected from a male donor. Item 2 (75  $\mu\text{L}$ ) was created using blood collected from another male donor. Item 3 (50  $\mu\text{L}$ ) was created using a 1:1 mixture of blood from the male donor used in Item 1 and semen from the male donor used in Item 2. Item 4 (50  $\mu\text{L}$ ) was created using blood from the male donor used in Item 1. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at  $-20^{\circ}\text{C}$  until shipment on March 07, 2023 following completion of the verification stage.

**SAMPLE SET ASSEMBLY:** For each sample set, all Items (1-4) were packaged into separate envelopes and then placed together in a pre-labeled sample set envelope and sealed. The sealed sample set envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

**VERIFICATION:** All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR loci.

## Summary Comments

The DNA-Semen test is part of the DNA Sample Specific Series, where participants are advised of the body fluid(s) present in the questioned stains. The test was designed to allow participants to assess their proficiency in the analysis and comparison of dried stains. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Item 1 was created using blood collected from a male donor. Item 2 was created using blood collected from another male donor. Item 3 was created using a mixture of blood from the male donor used in Item 1 and semen from the male donor used in Item 2. Item 4 was created using blood from the male donor used in Item 1. (See Manufacturer's Information for preparation details)

### DNA Analysis:

For STR results, all participants reported consistent results with the exception of four participants, two of which reported an inconsistent result for more than one item.

For YSTR results, all participants reported consistent results with the exception of seven participants, who reported an inconsistent result for one or more loci.

A total of 65 participants reported the use of Probabilistic Genotyping (PG) software on one or more items.

### DNA Interpretations:

Of the 177 participants that returned results, 148 reported DNA interpretations. Twenty-four participants did not report interpretations and stated that the samples were analyzed for database purposes only. The remaining five participants selected the "No Interpretation" option for each conclusion.

For Item 3, all but one participant included the victim (Item 1) and the suspect (Item 2) as possible contributors to the stain. While the remaining participant did include the suspect, the victim was excluded as a possible contributor to the mixture.

For Item 4, all participants included the victim (Item 1) and excluded the suspect (Item 2) as possible contributors to the stain.

**Scenario:**

Police are investigating a sexual assault involving a male victim and male suspect. The victim reported to police that his coach sexually assaulted him. The victim reports the assault caused several injuries to both him and the suspect, and that the suspect ejaculated on his underwear. Police are submitting to your laboratory a stain from the underwear (Item 3) and a stain from the shirt (Item 4) the victim wore during the assault. Screening tests have been performed on both samples with the following results: Item 3 (victim's underwear) is positive for blood and semen, and Item 4 (victim's shirt) is positive for blood. Also collected were known blood samples from the male victim (Item 1) and the male suspect (Item 2).

**Items Submitted (Sample Pack S2):**

Item 1: Known blood from the male victim

Item 2: Known blood from the male suspect

Item 3: Questioned blood and semen stain from victim's underwear (off-white)

Item 4: Questioned blood stain from victim's shirt (yellow)

### Part II: DNA INTERPRETATION
