

# **Marihuana Identification and THC Quantitation**

## **Test No. 24-5031 Summary Report**

---

Each participant received three questioned samples containing plant material, which they were asked to analyze using their existing protocols. Data were returned from 307 participants and are compiled into the following tables:

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample set consisted of three items each containing 400 mg of plant material. Participants were asked to analyze each item to determine if marihuana (cannabis) was present and calculate the quantitative value of THC in the identified marihuana sample(s). Marihuana is a Schedule I controlled substance in the United States.

ITEMS 1 and 2 (PREPARATION): Approximately 400 mg of marihuana plant material was weighed out and deposited into a glassine bag, which was folded and secured with a label. The folded glassine bag was placed into a colored mylar bag. A red-colored bag was used for Item 1 and a silver-colored bag was used for Item 2. The bags were heat-sealed and then placed into a pre-labeled envelope.

ITEM 3 (PREPARATION): Approximately 400 mg of marshmallow leaf was weighed out and deposited into a glassine bag, which was folded and secured with a label. The folded glassine bag was placed into a gold-colored mylar bag. The bag was heat sealed and then placed into a pre-labeled envelope.

SAMPLE SET ASSEMBLY: One envelope of each item was placed into a pre-labeled sample set envelope.

VERIFICATION: Predistribution results were consistent with each other and the manufacturer’s preparation information. The following methods were used to examine the items: color tests, macroscopic, microscopic, GC/MS, GC-FID, and LC.

| Item | Plant Material   | THC Concentration |
|------|------------------|-------------------|
| 1    | Marihuana        | 20%               |
| 2    | Marihuana        | 27%               |
| 3    | Marshmallow Leaf | N/A               |

Please note that the THC concentration provided is from the Certificate of Analysis received with the testing material and may not necessarily represent the concentration of THC in the samples at the time of distribution. It is advised to wait for the Grand Mean statistics available in the Summary and Individual Reports before evaluating performance.

## **Summary Comments**

This test was designed to allow participants to assess their proficiency in the identification of marihuana (cannabis) and the quantitative analysis for THC content in questioned plant material. Items 1 and 2 consisted of marihuana plant material, while Item 3 consisted of marshmallow leaf. Refer to the Manufacturer's Information for preparation details.

Overall, 300 of 307 participants (98%) detected marihuana within both Items 1 and 2 and did not identify marihuana in Item 3.

For Item 1, 301 of 307 participants (98%) reported that marihuana was detected or identified, and six participants did not provide a response.

For Item 2, 304 of 307 participants (99%) reported that marihuana was detected or identified, and three participants did not provide a response.

For Item 3, 303 of 307 participants (99%) reported that marihuana was not detected or identified and one reported the detection of marihuana. Three participants did not provide a response.

For all items, tetrahydrocannabinol (THC), cannabidiol (CBD), and cannabinol (CBN) were the most tested-for cannabinoids. For Item 1 and Item 2, THC, which was identified by over 97% of participants, was the most identified cannabinoid. GC/MS, microscopic examination, and color tests were the most reported examination methods. GC/MS was the most reported quantitation method, followed by LC and GC-FID.

THC Quantitative Analysis results are separated into two tables: reported results and raw data. Table E, Reported Concentration, shows the reported concentration, uncertainty, K value and units that each participant would report according to their normal reporting procedures (e.g. single determination, mean, other). A similar number of participants reported values based on a single determination as did those that used a mean of several determinations for Items 1 and 2. Additionally, 54% of participants reported a semi-quantitative value (greater than a specified percent).

Table F, Raw Data & Statistical Analysis, shows the results in specified units (% Total THC) from each determination made by the laboratory to produce their reported result. The raw data was used to calculate the grand mean and the standard deviation for each item. The grand mean and standard deviation are supplied to assist the participants and accrediting bodies in determining the acceptability of the results. Participants with extreme data ( $\pm 3$  STD from grand mean) have been marked with an "X" and their results were excluded from the calculations of the grand mean and standard deviation.

A total of 69 participants reported raw data for Items 1 and 2. Five participants were marked as extreme and excluded from the statistics for both items, and two participants were marked as extreme for Item 1 only. No statistical analysis was generated for Item 3 as it was not marihuana and did not contain THC.

| ZB7LXZ  | A single determination.   |

| Response Summary for Item 3   | Participants: 39 |
|---|------------------|
| <i>For quantitative analysis of THC, the reported concentrations are:</i> |                  |
| A single determination:   | 21 (53.8%)       |
| The mean of duplicate/several determinations:                             | 17 (43.6%)       |
| Other:  | 1 (2.6%)         |

## Additional Comments

TABLE 4

| WebCode | Additional Comments   |
|---------|---|
| 2NQMRC  | For results for Items 1 and 2: Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).   |
| 2XFBNZ  | Sample size was too small   |
| 3TEMKX  | More sample given would allow for any possible errors in analysis to re-do the analysis if necessary. Ground plant material or a more homogeneous sample would be helpful.  |
| 47JA7Z  | A semi-quantitation GCMS method was used to determine if the Delta-9 THC concentration was greater than 1% in these 3 samples   |
| 4VJECB  | The following result is for CTS item 1 ([Laboratory] item 1.A) and CTS item 2 ([Laboratory] item 1.B): Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).  |
| 6ACTL4  | Usually we would not quantify due to the low sample amount submitted, a minimum of 2 grams is usually required. Samples 1 and 2, Cannabinol was detected but not confirmed with a stronger sample run.  |
| 6E4XE8  | For GC-MS analysis of items 1 and 2, some small peaks were additionally observed, which apparently correspond to other cannabinoids, however under validation conditions (Threshold of 13) they were not integrated; furthermore those cannabinoids are not included in the procedure nor validation, so they were not reported   |
| 6JMV84  | Item 3 could not be identified as cannabis, but THC was detected at a level below the laboratory's quantitation limit.  |
| 6LPTHW  | The amount of sample is not enough to perform moisture analysis, so a dry weight correction could not be done. Also the usual homogenization process could not be performed. This amount of sample is not enough for normal workflow and would normally be reported out as insufficient for analysis. Due to the amount of sample, normal procedure had to be deviated and adjusted multiple times.   |
| 6XK367  | Sample 3 was not found to have botanical features consistent with Indian hemp leaves or flowers.  |
| 6YXE2P  | Item 1-3 was a plant material that did not bear the macroscopic or microscopic characteristics of cannabis. The 4-AP color test resulted in no color change, so it was decided to do a general drug screen to rule out other controlled substances such as synthetic cannabinoids. [From Table 1F - Raw Data and Statistical Analysis - Item 1: "10.8". From Table 2F - Raw Data and Statistical Analysis - Item 2: "11.07". Data points removed per participant due to reporting procedure.] |
| 7GTLCT  | The quantity of each item received was not sufficient for duplicate sample preparations (200 mg per sample preparation) for GC-FID quantitative analysis.   |
| 7XHRNT  | Our testing is only semi-quantitative. The ratio of THC to an internal standard in the sample solution is compared to the same ratio in a known concentration vial. Anything above this known standard is considered "marijuana" and anything with THC below this concentration is considered "cannabis in an undetermined form".   |

TABLE 4

| WebCode | Additional Comments   |
|---------|---|
| 7XYNGT  | Item 1: One glassine bag was analyzed and found to contain: Plant material belonging to the genus Cannabis containing: Delta 9-Tetrahydrocannabinol. Concentration of cannabinoid(s) not determined. Net weight of material - 0.39 (+/- 0.03) gram(s). Item 2: One glassine bag was analyzed and found to contain: Plant material belonging to the genus Cannabis containing: Delta 9-Tetrahydrocannabinol. Concentration of cannabinoid(s) not determined. Net weight of material - 0.40 (+/- 0.03) gram(s). Item 3: One glassine bag was analyzed and found to contain: No Controlled Substances Identified in accordance with Title 21 United States Code (USC) Controlled Substances Act. Net weight of material - 0.39 (+/- 0.03) gram(s). Analysis was conducted using the following methods: color test, microscopic examination, macroscopic examination, GC-MS. Measurement uncertainty of reported net weights is at a 99.7% level of confidence. |
| 82XL36  | This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). For items 1 and 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. For item 3: Analysis halted-microscopy is negative per criteria in [Procedural Document].  |
| 8CDDNU  | samples given were too small for moisture determination so values are not dry weight corrected; items would have been reported as "Insufficient for analysis" using normal policies so several deviations had to be approved  |
| 8JDTD2  | Botanical ID only was performed for all three items.  |
| 8UTMPU  | Samples were not ground. Not enough sample to perform moisture analysis. Results are not dry-weight corrected.  |
| 999CWV  | Item #1 and Item #2 analyzed via GC/MS Semi-Quant method with a 3% Delta-9-THC threshold.   |
| 9EENAV  | GC/MS purity assessment using 1-point calibrator as a 1% w/w total THC decision limit. No values are reported.  |
| 9MQZBZ  | Morphological analysis of marijuana is routinely performed but not reported, per SOP. Only instrumental analysis by GC/MS is reported. Positive results are reported as tetrahydrocannabinols. Our GC/MS method does not distinguish between THC and THCA, however, both reference standards are run along with the samples.  |
| 9TRERU  | the lab does not perform quantitative analysis or analysis of the cannabinoids in the exhibits.   |
| 9WGDE7  | Item 1: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC) Net weight of total sample: Less than 1 gram. Item 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Net weight of total sample: Less than 1 gram.  |
| A948YX  | [Name] tested the samples (item 1-3) for the presence of THC.   |
| AKGC7U  | THCA was tested for in the sense that it would have been present as THC on the GC/MS but the sample was not tested in such a way that it would have been determined to be THCA vs THC   |
| APC74V  | The [Laboratory] only tests for the presence of THC at greater or less than 1% (no quantitation is performed). This method is only used for plant material with a weight received of $\geq 0.100$ g. Using this method, the following identifications were made. Item 1:Tetrahydrocannabinol $> 1\%$ . Item 2:Tetrahydrocannabinol $> 1\%$ . Item 3:No Controlled Substance Identified  |

TABLE 4

| WebCode | Additional Comments  |
|---------|--|
| C2F46Z  | The process of qualitative identification of the cannabinoids of the item 1, 2 and 3 samples was carried out and quantitation was attempted, however, there were technical problems with the Thermo 1300 FID chromatographic equipment, in which it was not possible to obtain an adequate curve for quantification in the same way the mass spectrometric detection test was carried out in the Agilent 8890 MSD 5977B equipment, without obtaining an adequate correlation coefficient R2 in the calibration curve. We changed the configuration of the Agilent equipment for FID detector where we obtained an appropriated curve but we found that the extraction of cannabinoids was not complete. With the above it was not possible to perform the quantification process to the interlaboratorial CTS 24-5031 in an analytically adequate way, to deliver a true result according to the regulations and the integrated system that governs the Narcotics laboratory |
| CH6AGZ  | Item 1 and 2 results: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).  |
| DDP2T2  | Item 1: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Item 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).  |
| DN63ZU  | Item 1 (001A): Analysis confirms the presence of Cannabis: Total delta-9 THC content is 2.2% +/- 0.6%; Total THCA content is 13.3% +/- 3.9% in the sample tested. The uncertainty of measurement is calculated at a 99.73% confidence level. Item 2 (001B): Analysis confirms the presence of Cannabis: Total delta-9 THC content is 4.0% +/- 1.2%; Total THCA content is 8.8% +/- 2.6% in the sample tested. The uncertainty of measurement is calculated at a 99.73% confidence level. Item 3 (001C): No controlled substances were detected.  |
| DVARRZ  | For items 1 and 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC)  |
| DWJW7P  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.   |
| ER4Q3M  | Samples were not ground prior to testing. Not enough sample for moisture analysis, so the results were reported without a dry weight correction.   |
| EV36NR  | Item 1: 0.3g plant material - Delta 9 - THC. Item 2: 0.3g plant material - Delta 9 - THC. Item 3: 0.3g plant material - No scheduled substance found.  |
| FZR2QN  | A semi-quantitative GCMS analysis method was used to determine a concentration of Delta-9 THC was greater than 1%  |
| GDDVJT  | The Cannabis/Hemp Differentiation Method is used to determine if plant material identified as Cannabis contains at least 1% total Delta-9-THC.   |

TABLE 4

| WebCode | Additional Comments  |
|---------|--|
| GP9RXN  | We only do a qualitative analysis of THC relative to a 1% decision point for samples that produce a positive result with a modified Duquenois-Levine color test. If no positive color test result is obtained, samples are analyzed using our general screening method. For decision point analysis, we compare the ratio of THC:internal standard in the sample to that of THC:internal standard in our 1% reference material. If the ratio of the sample is greater than that of the reference material, we report it as a controlled substance and note that THC was identified at a concentration greater than 1%. If the ratio of the sample is less than that of the reference material, then we note that we cannot, based on our testing, determine if it does or does not meet the legal definition of hemp or marijuana and note that THC was present at a concentration less than 1%. "Tetrahydrocannabinol (Schedule I)" is reported for a sample when total THC is greater than 1%. If THC is identified/indicated, but is less than 1%, it is reported to contain (or possibly contain) "Tetrahydrocannabinol", but it is noted that it cannot conclusively be determined whether or not it is a controlled substance. |
| GQ2VAV  | For items 1 and 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).   |
| GT93TN  | We determine if THC is a schedule I substance on plant material items with a received weight of greater than 100 mg. A portion of the plant material is run along side a reference material with a ratio of THC area counts : Internal Standard area counts of greater than 1. We then compare the unknown plant material ratio to the ratio of the reference material. If the unknown is above the ratio of the reference material, THC is a schedule I drug (or considered Marijuana) as [State] Statutes state THC at concentrations of greater than 0.3% is Marijuana and not hemp. If the ratio is below that of the reference material, THC is reported with no schedule.  |
| H43UXR  | Item 1: This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. Item 2: This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce.  |
| JK3CXM  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.   |
| JYNBGB  | A semi-quantitative analysis was performed on Items 1 and 2. No full quantitation was performed.   |
| K6AT4K  | The NEGMS colour test used as a screen for items 1 and 2 screened for the presence of cannabinoids in general, however only THC was confirmed via further quantification testing as per usual laboratory procedure.  |
| KYKBTF  | Sample provided was very limited. Several procedures in our technical manual could not be followed (e.g. moisture analysis) because insufficient quantity was provided. This skewed the results because moisture % could not be taken into account and therefore results were not reported on a dry weight basis. Additionally, our state does not recognize total THC. THCA is not scheduled and therefore we do not regularly calculate total THC. Because such a small sample size was provided, if there was an instrument error we would not have had enough sample to re-try the extraction per our procedures and we would not be able to provide results. Please provide at least 2 g of plant material for future tests.  |
| L7YG3R  | ITEM 1 AND ITEM 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. These samples were analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).  |

TABLE 4

| WebCode | Additional Comments  |
|---------|--|
| LETQ6A  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.   |
| LF4NHR  | CTS Item 1 and CTS Item 2 were analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Analysis of CTS Item 1 and CTS Item 2 confirms the presence of plant material of the genus Cannabis in the sample tested with greater than 0.3% THC.   |
| LU48FJ  | A semi-quantitation method was used to determine if any of the samples were greater or less than the 1% THC threshold.   |
| LZ6TWK  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.   |
| MAY8MC  | [From Table 1G and Table 2G - Quantitative Analysis: Reporting Procedures: "Concentration values are not reported. A semi-quantitative analysis is done to determine whether the samples are greater than a reference standard of 2% total delta-9 THC. Triplicate samplings of the submission are taken and if the average is found to be above the 2% threshold it is reported as "marijuana". If the triplicate average of the submission samples are below the threshold it is reported as "Cannabis in an undetermined form" with a statement on the report that additional analysis may be able to make this determination but it is not currently performed by our laboratory."]  |
| MPRJFM  | We do not routinely carry out quantification on such low amounts of sample, our procedures usually require approximately 3-5 grams of sample. Whilst cannabinal (CBN) was detected in the herbal material in item 1, it would not routinely be reported if THC had also been detected.   |
| MZAJPN  | Items 1 and 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC).   |
| N9XG8G  | At our lab, we do a 1% method for THC. This process allows us to determine if there is <1% or >1% THC in a plant material sample. In order to do this, the sample must be plant material that is at least 0.100g. I did the 1% method on the first two sample in this case, as they were both plant material of at least 0.100g, and they both color tested for THC. Using this method, I was able to identify THC >1% in both samples.  |
| NG9T9L  | Per laboratory SOP, a semi-quantitative analysis is performed on suspected marijuana items. This method is designed to determine if a plant contains at least 1% d9-THC.   |
| NWKB2L  | Total THC was not determined because the amount of sample received was not sufficient to perform the test.   |
| NZ8XU9  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.   |
| P83BBN  | Result for item 1: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Net weight of total sample: Less than 1 gram. Result for item 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Net weight of total sample: Less than 1 gram Result for item 3: No controlled substances confirmed in the sample tested as defined by [State Statute]. Net weight of sample tested: Less than 1 gram |

TABLE 4

| WebCode | Additional Comments   |
|---------|---|
| PAUAPL  | A semi-quantitative GC/MS method was used to determine if the concentration of delta-9 THC was less than or greater than 1%. For Item 1 and Item 2, the concentration of delta 9-THC was greater than 1%. Laboratory reporting procedure is to include a statement of the THC content above or below this cut-off only. The report will not include an identification of marihuana or hemp.   |
| PDTKKL  | THC quantitation not performed on Items 1 and 2 as the instrument used to perform this analysis is out of service and awaiting a system engineer to fix.  |
| PHKWEW  | Delta 9 THC was identified in Items 1 and 2.  |
| PTJUYP  | Item 1 substance identified: Cannabis (greater than 0.3% Total THC). Item 2 substance identified: Cannabis (greater than 0.3% Total THC).   |
| PYQBGC  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measure will not be reported.  |
| QBRCL2  | Items 1 & 2 our method validation only goes to 10% therefore the reported results would be only greater than 10%.   |
| QN4DQ8  | 1% delta-9 THC procedure used to identify marijuana.  |
| RACGCE  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.  |
| RZBTKG  | The collected samples are not homogeneous   |
| TC3X98  | Our reporting format is in line with the specific value noted in the law. For samples that quantitate greater than 0.4% Total THC, our labs report "Substance Identified: Cannabis (greater than 0.3% Total THC)". Other reporting requirements apply to samples with % Total THC less than 0.2% and between 0.2% and 0.4%. The raw % Total THC is not published in the report unless specifically requested by a prosecutor or the submitting agency. Instrumental analysis used in Cannabis quantitation cases has the capacity to qualitatively identify multiple cannabinoid compounds, but our quantitation procedure is designed only for delta-9-THC and delta-9-THCA quantitation.  |
| TJ3BE3  | Semi-quantitative analysis was performed on Items 1-3 in accordance with [State Agency] procedures.   |
| U4MEQT  | Item 1: Marihuana is identified in Item 1 based upon an evaluation of the amount of delta-9-tetrahydrocannabinol and tetrahydrocannabinolic acid (measured as Total THC) and comparison with a reporting limit of 1% Total THC. Item 2: Marihuana is identified in Item 2 based upon an evaluation of the amount of delta-9-tetrahydrocannabinol and tetrahydrocannabinolic acid (measured as Total THC) and comparison with a reporting limit of 1% Total THC. Item 3: No controlled substances detected.  |
| UCYNZ8  | Total THC = Total Delta-9-THC. Upper Limit of Quantitation (ULOQ) = 5.00% When the quantitative result is reported as >5.00% by weight, uncertainty of measurement will not be reported.  |
| UP7E3F  | A semi-quantitative 1% d9-THC threshold testing method is used to determine if a plant contains at least 1% d9-THC.   |
| UPKZCH  | Results: 1.A: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). 1.B: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). 1.C: Analysis halted – microscopy is negative per criteria in [Procedural Document]. |

TABLE 4

| WebCode | Additional Comments   |
|---------|---|
| URVRKX  | For Items 1 and 2, our quantitative method validation only goes up to a maximum of 10%, therefore the reported results would only state greater than 10%.   |
| V2WPRY  | A semi-quantitative method, similar to the [State Agency], was used for Items 1 and 2 to determine if the total concentration of THC was above 0.3%.  |
| V83946  | The plant material in Item 1 was analyzed and found to contain cannabis based on a Total THC concentration greater than 0.3 percent. The plant material in Item 2 was analyzed and found to contain cannabis based on a Total THC concentration greater than 0.3 percent. No controlled substances or known drugs of forensic interest were identified in the plant material in Item 3.   |
| VDAUW9  | A semi-quantitation was conducted on all three items to examine whether the total Delta 9-THC percentage was greater or less than one percent.  |
| VJ7VQ8  | GC/MS purity assessment using 1-point calibrator as a 1% w/w total THC decision limit. No values are reported.  |
| WDYKD8  | A semi-quant was performed using a 3% threshold for Marijuana determination if confirmed to be Cannabis.  |
| WN6FHX  | Samples 1 and 2 were analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). Agency item 1: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Agency item 2: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Agency item 3: Analysis halted – microscopy is negative per criteria in [Procedural Document].  |
| X289MF  | 1A: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). 1B: Analysis confirms the presence of plant material of the genus Cannabis in the sample tested. Greater than 0.3% tetrahydrocannabinol (THC) as defined by [State Statute]. Weight conversion: 28.35 grams per ounce. This sample was analyzed using a semiquantitative method using a threshold of approximately 1% tetrahydrocannabinol (THC). |
| XVGZVU  | This laboratory only perform semi-quantitative analysis on plant material. Items with a calculated percent dry weight greater than 1.00% are reported as Marijuana. A calculated percent dry weight at or below 1.00% is reported as cannabis. Since a specific percent dry weight value is not reported no uncertainty of measurement is reported. For Item 1 and Item 2 an additional comment would be added to the report that states "Total Delta-9-Tetrahydrocannabinol concentration on a dried weight basis; greater than 1.00%."  |
| YJHKRB  | Per laboratory procedure it was determined Items 1 and 2 contain at least 1% delta-9-THC. (Semi-quantitative 1% threshold testing performed).   |
| YQ2T8V  | [From Table 1F - Raw Data and Statistical Analysis - Item 1: "65613086", "2292352", "28.62". From Table 2F - Raw Data and Statistical Analysis - Item 2: "63918063", "2181897", "29.29". From Table 3F - Raw Data and Statistical Analysis - Item 3: "0", "1684252", "0.00". Data points removed per participant due to reporting procedure.]   |
| Z9GGY2  | Due to limited sample amount, no moisture analysis was performed.   |
| ZPLXY9  | Item 1: total delta9 THC content: 2.7% +/- 0.8% total THCA content: 17.5% +/- 5.2%. Item 2: total delta9 THC content: 7.0% +/- 2.1%. total THCA content: 12.2 +/- 3.6%  |

-End of Report-  
(Appendix may follow)

## Test No. 24-5031: Marihuana Identification and THC Quantitation

DATA MUST BE SUBMITTED BY **Sept. 09, 2024, 11:59 p.m. EDT** TO BE INCLUDED IN THE REPORT

Participant Code: U1234J

WebCode: U928MD

The Accreditation Release section can be accessed by using the "Continue to Final Submission" button above. This information can be entered at any time prior to submitting to CTS.

### Scenario:

An investigator has submitted three separate questioned samples containing what appears to be plant material for analysis. Please examine these samples and determine if marihuana (cannabis) is present. Determine the quantitative value of THC in the identified marihuana (cannabis) sample(s), if that is your laboratory's policy.

### Items Submitted (Sample Pack MID):

Item 1: Plant Material

Item 2: Plant Material

Item 3: Plant Material

**Examination Results for Item 1**

**1-1) Is marihuana (cannabis) detected/identified in Item 1?**

- Yes, marihuana (cannabis) detected/identified
- No, marihuana (cannabis) not detected/identified

**1-2) What cannabinoids were tested for and identified in Item 1?**

|  | <u>Tested For</u>  | <u>Identified</u>        |
|--|--|--------------------------|
| Tetrahydrocannabinol (THC)               | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabinol (CBN)                         | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabigerol (CBG)                       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Tetrahydrocannabinolic Acid (THCA)       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabidiol (CBD)                        | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Other cannabinoids identified (specify): | <input style="width: 300px; height: 15px;" type="text"/> |                          |

**1-3) What method(s) were used to examine and/or quantitate Item 1?**

|  | <u>Examination</u>       | <u>Quantitation</u>      |
|--|--------------------------|--------------------------|
| Color Tests  | <input type="checkbox"/> | <input type="checkbox"/> |
| GC-FID   | <input type="checkbox"/> | <input type="checkbox"/> |
| GC/MS  | <input type="checkbox"/> | <input type="checkbox"/> |
| LC   | <input type="checkbox"/> | <input type="checkbox"/> |
| Macroscopic  | <input type="checkbox"/> | <input type="checkbox"/> |
| Microscopic  | <input type="checkbox"/> | <input type="checkbox"/> |
| TLC  | <input type="checkbox"/> | <input type="checkbox"/> |
| Other (specify):   | <input type="checkbox"/> | <input type="checkbox"/> |
| <input style="width: 100px; height: 15px;" type="text"/> |                          |                          |

**Quantitative Results for Item 1**

No quantitative analysis performed

**1-4) Please record the concentration of total THC (combination of THC and THCA) that was obtained.**  
(Results should be reported using your laboratory reporting criteria for decimal places, uncertainty, and units.)

|   |  |   |
|---|--|---|
| <b>Reported Concentration</b>                     | <b>Uncertainty (k=<input style="width: 40px;" type="text"/>)</b> | <b>Units</b>                                  |
| Item 1: <input style="width: 80px;" type="text"/> | ± <input style="width: 80px;" type="text"/>                      | ( <input style="width: 80px;" type="text"/> ) |

**1-5) Please list your raw data determinations below in percent of total THC.** (Results not reported in % will be excluded from statistical calculations.)

|   |   |   |   |
|---|---|---|---|
| <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> |
|---|---|---|---|

**1-6) For quantitative analysis of THC, are reported concentrations:**

- A single determination?
- The mean of duplicate / several determinations?
- Other? (Specify):

**Examination Results for Item 2**

**2-1) Is marihuana (cannabis) detected/identified in Item 2?**

- Yes, marihuana (cannabis) detected/identified
- No, marihuana (cannabis) not detected/identified

**2-2) What cannabinoids were tested for and identified in Item 2?**

|  | <u>Tested For</u>  | <u>Identified</u>        |
|--|--|--------------------------|
| Tetrahydrocannabinol (THC)               | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabinol (CBN)                         | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabigerol (CBG)                       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Tetrahydrocannabinolic Acid (THCA)       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabidiol (CBD)                        | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Other cannabinoids identified (specify): | <input style="width: 300px; height: 15px;" type="text"/> |                          |

**2-3) What method(s) were used to examine and/or quantitate Item 2?**

|  | <u>Examination</u>       | <u>Quantitation</u>      |
|--|--------------------------|--------------------------|
| Color Tests  | <input type="checkbox"/> | <input type="checkbox"/> |
| GC-FID   | <input type="checkbox"/> | <input type="checkbox"/> |
| GC/MS  | <input type="checkbox"/> | <input type="checkbox"/> |
| LC   | <input type="checkbox"/> | <input type="checkbox"/> |
| Macroscopic  | <input type="checkbox"/> | <input type="checkbox"/> |
| Microscopic  | <input type="checkbox"/> | <input type="checkbox"/> |
| TLC  | <input type="checkbox"/> | <input type="checkbox"/> |
| Other (specify):   | <input type="checkbox"/> | <input type="checkbox"/> |
| <input style="width: 100px; height: 15px;" type="text"/> |                          |                          |

**Quantitative Results for Item 2**

No quantitative analysis performed

**2-4) Please record the concentration of total THC (combination of THC and THCA) that was obtained.**  
(Results should be reported using your laboratory reporting criteria for decimal places, uncertainty, and units.)

|  |  |  |
|--|--|--|
| <b>Reported Concentration</b>                      | <b>Uncertainty (k=<input style="width: 50px;" type="text"/>)</b> | <b>Units</b>                                   |
| Item 2: <input style="width: 100px;" type="text"/> | ± <input style="width: 100px;" type="text"/>                     | ( <input style="width: 100px;" type="text"/> ) |

**2-5) Please list your raw data determinations below in percent of total THC.** (Results not reported in % will be excluded from statistical calculations.)

|   |   |   |   |
|---|---|---|---|
| <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> | <input style="width: 100%; height: 15px;" type="text"/> |
|---|---|---|---|

**2-6) For quantitative analysis of THC, are reported concentrations:**

- A single determination?
- The mean of duplicate / several determinations?
- Other? (Specify):

**Examination Results for Item 3**

**3-1) Is marihuana (cannabis) detected/identified in Item 3?**

- Yes, marihuana (cannabis) detected/identified
- No, marihuana (cannabis) not detected/identified

**3-2) What cannabinoids were tested for and identified in Item 3?**

|  | <u>Tested For</u>  | <u>Identified</u>        |
|--|--|--------------------------|
| Tetrahydrocannabinol (THC)               | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabinol (CBN)                         | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabigerol (CBG)                       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Tetrahydrocannabinolic Acid (THCA)       | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Cannabidiol (CBD)                        | <input type="checkbox"/>                                 | <input type="checkbox"/> |
| Other cannabinoids identified (specify): | <input style="width: 300px; height: 15px;" type="text"/> |                          |

**3-3) What method(s) were used to examine and/or quantitate Item 3?**

|  | <u>Examination</u>       | <u>Quantitation</u>      |
|--|--------------------------|--------------------------|

## RELEASE OF DATA TO ACCREDITATION BODIES

The Accreditation Release is accessed by pressing the "Continue to Final Submission" button online and can be completed at any time prior to submission to CTS.

CTS submits external proficiency test data directly to ANAB and/or A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ANAB and/or A2LA. (Accreditation Release section below must be completed.)
- This participant's data is not intended for submission to ANAB and/or A2LA.

Have the laboratory's designated individual complete the following steps only if your laboratory is accredited in this testing/calibration discipline by one or more of the following Accreditation Bodies.

### Step 1: Provide the applicable Accreditation Certificate Number(s) for your laboratory.

ANAB Certificate No.

A2LA Certificate No.

### Step 2: Complete the Laboratory Identifying Information in its entirety.

Authorized Contact Person and Title

Laboratory Name

Location (City/State)
