This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample pack consisted of two known bloodstains and two questioned stains. Participants were asked to analyze these items using their existing protocols.

**SAMPLE PREPARATION:** Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried into separate envelopes.

**SAMPLE PACK ASSEMBLY:** One of each item was placed into a pre-labeled sample pack envelope and sealed. The sealed envelopes were then packaged in pre-labeled heat seal envelopes and sealed. Completed sample packs were stored at -20°C until shipment.

**VERIFICATION:** Predistribution results were consistent with each other and the manufacturer's preparation information. Consistent allelic results were reported for all STR and YSTR loci.

## Summary Comments

This test was designed to allow participants to assess their proficiency in the analysis and comparison of dried stains, where participants are advised of the body fluid(s) present in the questioned stains. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Item 1 was created using blood from a female donor. Item 2 was created using blood from a male donor. Item 3 was created using blood from a female donor whose known standard was not provided. Item 4 was created using blood from the female donor used in Item 1 and semen from a male donor whose known standard was not provided. Refer to the Manufacturer's Information for preparation details.

Data were returned by 226 participants.

### DNA Analysis

For STR results, all participants reported consistent results, with the exception of eighteen participants which reported an inconsistent result for one or more items. A majority of inconsistent results were noted for Item 4-Blood in which most participants were missing an allele at one or more loci. Of the eleven participants that were missing alleles, nine were missing a "16" allele at locus D2S1338.

For YSTR results, all but two participants reported consistent results.

### DNA Interpretations

Of the 226 participants that returned DNA results, 213 reported DNA interpretations for one or both questioned stains. Eight participants selected the "No Interpretation" option for each conclusion, three stated the samples were analyzed for database purposes only, one did not respond for each conclusion, and one did not provide a response for Item 3 conclusions and selected the "No Interpretation" option for Item 4 conclusions.

For Item 3, all participants excluded the victim (Item 1) and excluded the suspect (Item 2) as possible contributors to the stain.

For Item 4, all but one participant included the victim (Item 1) as a possible contributor to the stain. The remaining participant excluded the victim as a possible contributor to the stain. All but one participant excluded the suspect (Item 2) as a possible contributor to the stain. The remaining participant included the suspect as a possible contributor to the stain.

GDHMXB	The answers in this CTS report were reported using probabilistic genotyping. All alleles deemed possible for any contributor to the mixture are being reported. With probabilistic genotyping stutter alleles are considered as either allelic or stutter during the deconvolution of samples. This sometimes results in true stutter peaks being reported as possible alleles. In addition, probabilistic genotyping also considers the potential for allele drop-out. Possible missing alleles are reported as "Q" alleles in the results.

K87ZV6	Item 3 (Shirt bloodstain): Profile interpreted as a single-source sample. Multiple loci are inconsistent with both the victim and the suspect; therefore, both individuals are excluded as contributors. Item 4E1 (Epi) (Non-sperm fraction from questioned blood/semen stain on victim's underwear): The profile is a mixture with the victim detected as the major contributor. Additional alleles observed are not consistent with the suspect's genotype at several loci; therefore, the suspect is excluded. Item 4E2 (Sperm) (Sperm fraction from questioned blood/semen stain on victim's underwear): The profile is dominated by a non-reference contributor. Observed alleles at key loci (e.g., D21S11 = 31.2, 32.2) are not consistent with the suspect's genotype (30,30). Low-level alleles consistent with the victim are present. The suspect is excluded. Overall: Interpretation was performed in accordance with laboratory thresholds and procedures. Results are reported based on observed allele patterns and documented genotypes.

ZBB2A8	Suspect is eliminated as a contributor to the DNA mixture profile detected in the nonsperm (F1) fraction of the victim's underpants stain.
ZN2VL2	Spermatozoa were observed on a microscope slide prepared from sample 1.4 (sperm cell fraction). Screening for the presence of male DNA using the Plexor HY Real-Time PCR System was performed on Item 3: Questioned blood stain from suspect's shirt (pink) and Item 4: Questioned blood and semen stain from victim's underwear (yellow). Male DNA was not detected on Item 3: Questioned blood stain from suspect's shirt (pink). Male DNA was detected on Item 4: Questioned blood stain from victim's underwear (yellow).

**Scenario:**

Police are investigating a sexual assault involving a female victim and male suspect. The victim reported to police that she was walking with a friend when the suspect attacked them. The suspect hit both females and forced the victim to have vaginal sex. The suspect has been apprehended by police. Police are submitting to your laboratory a stain from the shirt the suspect was wearing at the time of arrest (Item 3) and a stain from the underwear the victim was wearing at the time of the assault (Item 4). Screening tests have been performed on both samples with the following results: Item 3 (suspect's shirt) is positive for blood, and Item 4 (victim's underwear) is positive for blood and semen. Also collected were known blood samples from the female victim (Item 1) and the male suspect (Item 2). A known blood sample from the victim's friend has not been collected at this time.

**Items Submitted (Sample Pack S4):**

Item 1: Known blood from the female victim

Item 2: Known blood from the male suspect

Item 3: Questioned blood stain from suspect's shirt (pink)

Item 4: Questioned blood and semen stain from victim's underwear (yellow)
