

Body Fluid Identification Test No. 15-578 Summary Report

This proficiency test was sent to 259 participants. Each participant received a sample pack containing six items for examination. Participants were asked to examine each item and report the body fluid(s) identified. Data were returned from 218 participants (84% response rate) and are compiled into the following tables:

	<u>Page</u>
<u>Manufacturer's Information</u>	2
<u>Summary Comments</u>	3
<u>Key to Screening Results</u>	4
<u>Table 1: Screening Conclusions & Test(s) Performed</u>	5
<u>Table 2: Serology Screening Results</u>	159
<u>Table 3: Additional Comments</u>	285
<u>Appendix: Data Sheet</u>	296

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack consisted of six items for testing, four of which were swabs and two of which were evidence items. Participants were asked to examine Items 1 and 2 for the body fluids that they typically encounter in casework. Items 3-6 were to be examined for scenario specific body fluids.

SAMPLE PREPARATION: The stains on Item 1 (white swabs) were prepared using human saliva. The stains on Item 2 (pink swabs), Item 4 (yellow swabs) and Item 5 (purple wrist sweatband) were prepared using human whole blood which was drawn into citric acid preservative bloodbank bags. The stain on Item 3 (blue swabs) were prepared using human semen. The stain on Item 6 (black rag) was a mixture prepared from human whole blood and semen. The raw semen was from a single donor, stored frozen at a temperature below -20°C. The semen was thawed and mixed 1:1 with TAE buffer, and then mixed 1:1 with the blood. This mixture was used to spot the Item 6 substrate. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried.

SAMPLE SET ASSEMBLY: Each sample set contained a package of unused swabs, questioned swabs (Items 1, 2, 3 and 4) and two questioned items of evidence, a purple sweatband (Item 5) and a black rag (Item 6) which were placed in a pre-labeled sample pack envelope. The sealed sample pack envelopes were then packaged in pre-labeled envelopes and heat sealed. This process was repeated until all of the sample sets were prepared.

VERIFICATION: All predistribution participants confirmed the manufacturer's expected conclusions, reporting consistent body fluid identifications for Items 1-5. Two laboratories reported positive semen and blood results for Item 6 however, the third laboratory did not identify semen after running a single presumptive test.

Sample Preparation Schedule

<u>Item</u>	<u>Substrate</u>	<u>Fluid</u>	<u>Volume</u>
1	4 White swabs	Saliva	100 µl/swab
2	4 Pink swabs	Blood	100 µl/swab
3	4 Blue swabs	Semen	100 µl/swab
4	4 Yellow swabs	Blood	100 µl/swab
5	Purple wrist sweatband	Blood	100 µl
6	Black rag	Blood and Semen	100 µl

Completed sample sets were stored at -20°C until shipment on March 09, 2015, following receipt of predistribution results.

Summary Comments

The 15-578 Body Fluid Identification test was designed to allow participants to assess their proficiency in the identification of stains that may contain dried body fluids. Each participant received six items for testing, four of which were swabs and two which were whole evidence pieces. No scenario was provided for Items 1 and 2; participants were requested to test for body fluids that they typically encounter in casework. Scenarios were provided for the remaining items; participants were asked to treat these as they would casework.

For the following paragraphs, the numbers of participants presented are those who tested for the particular body fluid and reported results in Table 1.

Item 1 consisted of four swabs containing saliva. For saliva, all participants reported positive/indicative. For blood, the majority (91%) of participants reported negative, 14 reported inconclusive and two reported positive/indicative. For semen, the majority (99.1%) of participants reported negative and two reported positive/indicative.

Item 2 consisted of four swabs containing blood. For blood, all participants reported positive/indicative. For semen, the majority (99.5%) of participants reported negative and one reported positive/indicative. For saliva, the majority (89.4%) of participants reported negative, nine reported positive/indicative and six reported inconclusive.

Item 3 consisted of four swabs containing semen. For semen, the majority (99.5%) of participants reported positive/indicative and one reported negative. For blood, the majority (84.7%) of participants reported negative, 17 reported positive/indicative and ten reported inconclusive. For saliva, the majority (89.6%) of participants reported negative, nine reported positive/indicative and four reported inconclusive.

Item 4 consisted of four swabs containing blood. For blood, all participants reported positive/indicative. For semen, the majority (99.0%) of participants reported negative and two reported positive/indicative. For saliva, the majority (90.2%) of participants reported negative, seven reported inconclusive and five reported positive/indicative.

Item 5 consisted of one purple wrist sweatband containing blood. For blood, all participants reported positive/indicative. For semen, the majority (99.5%) of participants reported negative and one reported positive/indicative. For saliva, the majority (94.5%) of participants reported negative, five reported inconclusive and one reported positive/indicative.

Item 6 consisted of one black rag containing a mixture of blood and semen. For blood, the majority (86.9%) of participants reported positive/indicative and 28 reported negative. For semen, the majority (87.0%) of participants reported positive/indicative and 27 reported negative. For saliva, the majority (97.4%) of participants reported negative, two reported inconclusive and one reported positive/indicative.

Key for Screening Tests Used

Participants were asked to use, where possible, the following chart of abbreviated screening test names. This was not an all inclusive list and was not designed to determine what tests should be performed. Participants were advised that tests not on this list may be used for screening.

Test	Abbreviation
Acid Phosphatase	AP
Kastle Meyer	KM
Leucomalachite Green	LMG
Microscopic	Micro
Ortho-tolidine	O-tol
Phenolphthalein-Tetramethyl	PTMB
Prostate Specific Antigen	PSA
Tetramethyl benzidine	TMB

Screening Conclusions & Test(s) Performed

Indicate the overall conclusion from the results of the screening tests performed.

Additional Comments

TABLE 3

WebCode	Additional Comments
27XMCV	Saliva testing was not performed on any items because the laboratory does not offer a test for saliva.
29T3ZY	Item 6 - the position of the bloodstaining and the semen staining corresponded on the black rag. Therefore I would add a sentence[sic] to state that "the corresponding position of the blood staining and semen staining is consistent with these being deposited as a mixture." Item 6 - no hemtrace[sic] analysis was undertaken on the bloodstain to preserve material for any subsequent DNA analysis.
2CNQHQ	Item 1: Marked as positive/indicative for fluorescence which was observed under ALS. Item 2: Marked as positive/indicative for fluorescent flecks which were observed under ALS. Item 3: Marked as positive/indicative for fluorescence which was observed under ALS. Item 4: Marked as positive/indicative for fluorescence which was observed under ALS. Item 5: No fluorescence was observed under ALS. Item 6: Marked as positive/indicative for faint fluorescence which was observed under ALS.
3B92LR	Item 3: Positive Hematrax results were obtained from this sample. However, the Hemastix positive results was delayed. Hematrax cards can cross react with the trace amount of hemoglobin found in other body fluids.
47A3JT	Lab does not conduct saliva testing.
4PPCMF	[From Table 2 - Items 3 - 6, Saliva Tests: "Biting/licking not mentioned - no evidential value".]
4TK8BT	Item 2: Ouchterlony- 9 animal species- bovine, cat, chicken, deer, dog, horse, rabbit, sheep, swine
634WHT	This laboratory does not confirm the presence of saliva. Item 3: The HemaTrace card is more sensitive than O-tolidine, and can detect hemoglobin in semen and other body fluids. I am reporting the results no blood detected due to this, even though the presumptive and the confirmatory conflict.
6BYZLP	[From table 2 - Items 1 - 6, Saliva Tests: "Test not done in this lab"]
6JA3X3	[From Table 2 - Saliva Tests: "Lab does not conduct saliva testing"]
6LJAYB	Item 6: An ALS using infrared illumination, was used as a pre-presumptive screening tool for blood. As per laboratory procedure, the background should "drop-out" in order to call a result as + or negative for illumination. "Drop-out" = dark color material will appear as white or light colored when subjected to infrared illumination allowing for possible blood stains to be viewed. Due to the nature of the material of item 6, infrared illumination for an area/stain was deemed inconclusive due to incomplete drop-out of the background. [From Table 2 - Saliva Tests: "Lab does not test for saliva."]
6XCW7Q	No hairs were observed on the submitted items. Area 1 on Item 6 (washcloth) was located using tactile examination.
74EZWP	An overall conclusion of inconclusive for blood was reported for Item 1 due to the fact that negative Phenolphthalein results were obtained, yet positive Hematrax results were also then obtained. The Hematrax product insert states under the limitations section that, "Due to the extreme sensitivity of the test, trace levels of hemoglobin might be detected occasionally in body fluid samples other than blood (e.g. urine, semen, stool, saliva, vaginal fluid, perspiration)".
7G4YMR	Our laboratory does not offer saliva testing services.
7MQUMB	Saliva tests are not performed at this laboratory.
7R4Q4K	ITEM 1: Four Swabs is NEGATIVE for Semen and Blood. ITEM 2: Four Swabs is NEGATIVE for Semen and POSITIVE for Blood. ITEM 3: Four Swabs is POSITIVE for Semen and NEGATIVE for Blood. ITEM 4: Four Swabs is NEGATIVE for Semen and POSITIVE Blood. ITEM 5: One purple wrist sweatband is NEGATIVE for Semen and POSITIVE for Blood. ITEM 6: One black rag is POSITIVE for Semen and Blood.
7TY8FH	We do not test for saliva in the laboratory, hence item 1-6 were not tested for saliva. Items 3-4 were tested for both semen and blood, mainly because the victim assume she might have injured the

TABLE 3

WebCode	Additional Comments
	assailant. It is possible that any body fluids (semen or blood) of the assailant could be on any part of the victim's body. Control swabs were tested for Brentamine (AP) and blood respectively, in order to determine if the reagents were pure.
88XE3B	Item 1: An inconclusive result for blood was given due to the negative presumptive test results and the positive immunological test result. Our procedures state we should give a final conclusion of inconclusive when a sample has these results as hemoglobin can be present in other biological fluids besides blood.
8BDX6D	CONCLUSIONS: Item #1: Possible saliva. Item #2: Apparent blood, indicative of human origin. Item #3: Semen with spermatozoa. Item #4: Apparent blood, indicative of human origin. Item #5: Apparent blood, indicative of human origin. Item #6: Semen with spermatozoa mixed with apparent blood (indicative of human origin).
8LF6YR	Item #1 per our procedure policy: 1.3.5.6 (Results and Interpretation), ". . . On occasion, a positive HemaTrace reaction may be observed even when the presumptive tests are negative. These results must be interpreted with caution. Hemoglobin may be present in body fluids other than blood in low concentrations and should be reported as inconclusive when presumptive tests for blood are negative. . . ." Item #5 RSID, See OR for pictures [Not Provided by Participant.]. Performed RSID a total of four times. The first two times I obtained a partial line in the testing window, I deemed both of these tests as failing. The third time I performed the test I used an RSID test from a different box but had the same lot number. The third test was negative, I used a different lot number for the fourth test which was also negative. I used the same extract on all four tests. Overall, RSID negative for item #5. I performed extra testing because the scenario given was vague. In normal casework I would have called the OIC to obtain further case details.
8PXHML	Did not test control swabs due to case circumstances indicating that these swabs were "unused."
8XMEBV	Items 2, 4, and 5 - Saliva/SALlgAE inconclusive results were reported as such because a color change in the liquid of the SALlgAE test vial could not be discerned due to the heavy reddish brown staining of the items.
9CXHZ9	* My laboratory does not perform screening tests for saliva. I used the ALS on items 5 and 6 as a screening tool to locate potential stains. My laboratory does not use the ALS as a test with a recorded result.
9YDWG	[From Table 2 - Item 5, Saliva Tests: "Item examined with ALS but no fluorescence observed, no indicative stains observed during visual examination". From Table 2 - Item 6, Saliva Tests: "Item examined under ALS - one area of fluorescence that was AP positive, PSA positive, and Micro positive"]
A3QZ8G	Item 1 (cotton tipped swabs with white plastic handles) was inconclusive for the possible presence of blood because the presumptive tests were negative while HemaTrace was positive. Item 3 (swabs from victim's inner thigh) was inconclusive for the possible presence of blood because one presumptive test was negative while another was positive.
A9XMU6	Item 2: According to our standard operation procedure: BIO 0013P, paragraph 7.2.2, bloody swabs are not tested with Brentamine and they are treated as Brentamine positive. Item 4: Is taken from the arm, presumable semen has no evidential value, it is not tested. Saliva is not tested in our laboratory, presumable saliva is sent to a DNA analysis lab.
ABK7ZH	Item 1: Inconsistent Hemastix results - I performed Hemastix 6 times on this item and had 3 positive results & 3 negative results. I made 3 smears (2 were from the same extract) and on all 3 I observed one sperm cell on each (each sperm cell verified by a second analyst - following lab policy). Item 6: Stain was very difficult to see - found with aid of a stereoscope. [From Table 2 - Item 1, Screening Conclusions & Test(s) Performed; Semen Conclusion, Pos./Ind.: "(sperm cells only)".]
AFZJ26	Item 6: The surface of the item was also swabbed using 2 sterile wet/dry swabs. Approximately half of each swab was sampled, combined, and saved for possible future DNA analysis. In addition, a water control swab was prepared, and approximately half sampled and saved.
AL6CXL	[From Table 2 - Items 5 & 6, Saliva test: "none - ALS negative"]

TABLE 3

WebCode	Additional Comments
ANBTEP	Item 7: Control Swab Negative result for the following tests: Hemastix, o-Tol, HemaTrace, AP, RSID Semen, RSID Saliva.
AY83N8	Item 3: Routinely we do not test swabs from unknown body fluids, however, in this case we did because all four swabs are duplicates; therefore, no loss of important evidential material due to incorrect testing. More over, in the absence of vaginal swabs, inner thigh swab had to be tested. Item 4: One swab was tested for possible blood and was Hemastix positive (Hem Pos). The reason behind this testing was to further more try to link the suspect to the victim, as she had said she might have injured her assailant; hence the blood on her arm has ownership in question. Item 5: The reasons behind testing for semen: (i) optimal testing and (ii) there could maybe have been more semen as the victim stated she might have injured her assailant and possibly there was a struggle during the incident. Item 6: Optimal testing had to be done because the ownership was in question. Presumable sweat had to be removed (to link suspect to the scene and prove ownership of the rag); blood had to be tested and semen. Reference: BIO0008P and BIO0013P.
C4F3X4	Item 2: According to our SOP BIO0013P, bloody swabs are not tested for semen. Item 4: Not tested for presumable semen because of the location it was collected from. It does not have evidential value. Saliva tests are not done at our laboratory they are sent to DNA Analysis laboratory.
CDMJUF	ITEM No1: Four Swabs NEGATIVE for SEMEN and BLOOD. ITEM No2: Four Swabs POSITIVE for BLOOD. ITEM No3: Four Swabs POSITIVE for SEMEN. ITEM No4: Four Swabs POSITIVE for BLOOD. ITEM No5: Purple wrist Sweatband POSITIVE for BLOOD. ITEM No6: Black Rag POSITIVE for SEMEN and BLOOD.
CGZN9A	Item 1 - Hematrace positive; per limitations #4 of product insert "trace levels of hemoglobin might be detected occasionally in body fluid samples other than blood". Due to this fact I determined overall blood to be inconclusive. In normal casework practice the Hematrace test would not have been performed due to negative presumptive chemical testing; however, per our procedure manual, if a chemical presumptive test is negative and the Hematrace test yields a positive result it should be reported out as inconclusive. Item 2 - RSID weak positive/faint line at 10 minutes; therefore reported as a positive result. There was no indication of the alleged act(s) of the assault, therefore, I tested for presence of saliva on items 3 and 4. Item 4 - RSID weak positive/faint line at 10 minutes; therefore reported as a positive result. Item 4 - Hematrace weak positive/faint line at 10 minutes; therefore reported as a positive result. Item 6 - 1 area fluoresced a bright neon orange color which is not consistent with bodily fluids, therefore I reported as a negative result. [From Table 2 - Items 5 & 6, Saliva Tests: "no areas of fluorescence observed"]
CKKFHR	Latent stains may be visualized using an alternate light source and/or optical filters. Presumptive chemical testing for the presence of blood is done with ortho- Tolidine. A positive presumptive chemical test result does not confirm the presence of blood. Testing for the presence of human blood is done with the ABACard HemaTrace test kit. This kit is known to cross-react with some species of the Mustelidae family and with higher primates. Presumptive chemical testing for the presence of seminal fluid/semen is done by the Modified Walker Acid Phosphatase test. A positive presumptive chemical test result does not confirm the presence of seminal fluid/semen. Testing for the presence of prostate specific antigen (PSA), a component of seminal fluid, is done with the ABACard p30 test kit. This kit may yield positive results with male urine. Sperm cell identification is done by microscopic examination of stained (nuclear fast red/picroindigocarmine) slides. Testing for the presence of alpha-amylase, an enzyme found in human saliva, is done with the Rapid Stain Identification-Saliva test kit (RSID-Saliva). This kit is known to yield weakly positive results with breastmilk and fecal samples.
CPDEWM	No hairs observed on item 5 or item 6. Sealed envelope labeled "Control swabs" not opened or examined.
DLCUGG	Results are from the predistribution test completed on 2/26/15. [From Table 2 - Items 1 - 6, Saliva Tests: "This lab does not test for saliva".]
DTWPK7	Item 6: The Black Rag was found on the scene. Thus, no ownership was established and therefore possible epithelial cells were collected from the exhibit.

TABLE 3

WebCode	Additional Comments
DYLCFJ	Please provide a more detailed scenario describing specific acts that transpired during the event in question.
E8AKBL	For items 1 and 2 this laboratory would not accept swabs for which the laboratory did not know the source or type of body fluid needing to be tested nor would this laboratory perform all tests, presumptive and confirmatory, for every body fluid for which we have a screening test. For item 4 ABA Hematrace, confirmatory testing for blood, was performed only on swab A in order to conserve the sample for future analysis. Item 6 was swabbed for the possible presence of epithelial cells (A, B). Microscopic examination was not performed on swabs A and B in order to conserve the sample for future analysis.
EDXAXP	Presumptive chemical testing for the presence of blood is done with ortho- Tolidine. A positive presumptive chemical test result does not confirm the presence of blood. Testing for the presence of human blood is done with the ABACard HemaTrace test kit. This kit is known to cross react with some species of the Mustelidae family and with higher primates. Latent stains may be visualized using an alternate light source and / or optical filters. Presumptive chemical testing for the presence of seminal fluid / semen is done by the Modified Walker Acid Phosphatase test. A positive presumptive chemical test result does not confirm the presence of seminal fluid / semen. Testing for the presence of PSA is done with the ABACard p30 test kit. This kit may yield positive results with male urine. Sperm cell identification is done by microscopic examination of stained (nuclear fast red / picroindigocarmine) slides. Testing for the presence of alpha-amylase (an enzyme found in human saliva) is done with the Rapid Stain Identification-Saliva test kit (RSID-Saliva). This kit is known to yield weakly positive results with breastmilk and fecal samples.
ELTADH	No fluorescence was detected on Items 5 & 6, so ALS results were marked as Negative.
EP6DVK	Saliva testing not performed at our laboratory.
FKRYRY	Amylase activity was detected in the extracts from one of the swabs from Item 2 and one of the swabs from Item 4. This is inconclusive for the presence of saliva. Amylase is present in high concentrations in saliva and at lower levels in other body fluids such as semen, vaginal fluid, urine, sweat, and fecal materials.
FVRLN3	HemaTrace test for item 1 resulted in a faint line indicating a positive result. Both ABACard p30 test and Seratec PSA test were performed for items 1 and 2.
GELEAZ	Overall conclusion for blood for Item 3 reported as positive (despite being KM negative) because Hemasix test is more sensitive to minute amounts of possible blood/hemoglobin. The RSID-Saliva test was performed twice for items 2, 3, 4 and 5 due to the observation of a very weak positive line at the test position of each cassette at the completion of the first test. Items 2 and 3 each had a faint pink line at the test position of the cassette at the completion of the second test and were interpreted as positive (overall conclusion for RSID-Saliva was positive for items 2 and 3). Item 4 had what appeared to be a possible shadow band (interpreted as a negative result) at the test position of the cassette at the completion of the second test. Therefore, overall RSID-Saliva conclusions for Item 4 were interpreted as inconclusive. For Item 5, a line was not observed at the test position of the cassette at the completion of the second test and was interpreted as negative. However, due to the very weak positive line from the first test, the overall RSID-Saliva conclusion for Item 5 was interpreted as inconclusive.
GJBYBV	Item 5 was only tested for blood because that was the only indication of biological fluids that may be present. Item 5 belongs to the victim and it was indicated that the victim may have injured the suspect. There was no indication that there would be other biological fluids present belonging to the suspect besides blood. Also, the swabs collected from the victims arm (Item 4) were tested for biological fluids and only came back positive for blood.
GVM6LW	Item 4: According to our technical procedures, this item would normally be reported as "spermatozoa were observed; however, no seminal fluid was detected." Saliva tests are not performed at this laboratory. A DNA analyst performs saliva testing at a different laboratory.
H6P4AP	[From Table 2 - Saliva Tests: "Lab does not conduct saliva testing"]

TABLE 3

WebCode	Additional Comments
HFWLA8	Item 1: A weak positive HemaTrace result was obtained from item 1. However, negative results were obtained with the KM, Hemastix, and Luminol tests, and the item did not support staining that was visually consistent with blood. Per laboratory procedures, due to the conflicting presumptive test results and HemaTrace results, the overall blood conclusion is inconclusive. A positive RSID Saliva result was obtained from item 1; it is not unexpected to observe trace amounts of hemoglobin in saliva. [From Table 2 - Items 5 & 6, Saliva Tests: "Not a swab from victim's skin; when screened with an ALS, no areas of fluorescence consistent with possible saliva were observed."]
HTWKX6	RSID (amylase) not done on red/brown stain from item 5 because of location of wear (arm) and the dark red/brown appearance looked more consistent with neat bloodstain than a mixed stain.
HXNZ7Y	The bloodstain on Item 6 was extremely difficult to visualize/locate.
JNJYNX	RSID was not performed on items 4-6 because case facts did not indicate that there was a possible presence of saliva.
JPEGX2	Item 6: Black Rag was found on the scene and therefore ownership of exhibit was in question and possible epithelial cells (High Friction) was collected from exhibit. All tests performed on exhibits are done according to the laboratory Standing Operating Procedures.
K8VYFD	(In information provided in scenario, it does not say whether the complainant was injured/bleeding or not. This information would be important in real casework). Re: Hematrace: - "This species identification test gives positive results for human blood, but also for blood from higher primates and members of the Mustelidae family". Re: Saliva Testing: - "Biological fluids other than saliva may produce positive results in this test, particularly vaginal fluid." Positive results are reported as "probable saliva stains". Re: Item 6: - The test results indicate the blood and semen may have been applied to the item as a mixture, rather than as two separate fluids.
KLQNY4	Items 1 to 6 were not tested for saliva because the laboratory does not do saliva tests.
KTAVMM	When running RSID Saliva cards for 1-2 through 1-6 a faint line was seen at 10 minutes, but the color of the line was not able to be determined. A 1:4 dilution was done for samples with a potential background interference (1-2, 1-4 1-5) and a 1:2 dilution was done for samples without a significant background (1-3, 1-6); the samples were rerun. Upon being rerun, 1-3 still had a faint line at 10 minutes that the color could not be determined; therefore, this sample was called inconclusive.
KVCUY2	** RSID inconclusive: Items 3 and 5 both had a very faint line at the 10 minute mark. Difficult to determine if this is a true positive or just a shadow of the band where the positive line would occur. In casework this item would be reported as inconclusive and sent forward for DNA testing.
KVCWMK	The positive RSID result from the Item 1 swabs is indicative for the presence of human saliva. This RSID test may also react with human breast milk, menstrual blood, and fecal material. The positive HemaTrace result from the Item 2 swabs, Item 4 swabs, Item 5 stain, and Item 6 stain is indicative for the presence of human blood. This HemaTrace test may cross-react with ferret and higher primate blood. The negative ALS result for semen from the Item 6 stain may be due to quenching of fluorescence from blood within this same stain.
KZR8ZN	RSID Amylase for Item 1-4 was inconclusive due to red-brown background. Sample was re-run using a 2:1 dilution with negative results.
L3VGAW	Item 1 resulted in KM (phenolphthalein) negative, Hemastix negative, Luminol negative and HemaTrace positive. These results are conflicting. According to [State] Police serology procedures, the combination of these results is to be reported as inconclusive for the presence of blood.
LGC967	1. According to the analysis method propose by our laboratory when detected in blood of human origin immunochromatography test and for sperm are observed in Christmas tree stain, no proof thevenon and Roland Pyramidon is made or test immunochromatography is performed for presence of Prostate Specific Antigen(PSA) respectively. 2. In the item 1, not semen and blood was detected. 3. In the item 2, blood of human origin was detected, no semen was detected. 4. In the item 3 were observed forty (40) to sixty (60) spermatozoa per field and not detected blood. 5. In the item 4, the human blood was detected, no semen was detected. 6. In the item 5, the human blood was detected,

TABLE 3

WebCode	Additional Comments
	no semen was detected. 7. In the item 6, were observed fifteen (15) to twenty (20) spermatozoa per field and the human blood was detected. 8. In white pattern swabs or no semen and blood was detected.
LN9AAB	Species testing via Ouchterlony was performed on Items 2, 4, 5, and 6. Nine species were tested for: bovine, cat, chicken, deer, dog, swine, horse, sheep, and rabbit.
LZ2P8D	"For items 1 and 2 this laboratory would not accept swabs for which the laboratory did not know the source or type of body fluid needed to be tested nor would this laboratory perform all tests, presumptive and confirmatory, for every body fluid for which we have a screening test." "For semen testing in this laboratory, we report seminal fluid and semen results separately. No overall conclusion about semen is provided."
M834UZ	Using ALS, searching for both blood and semen on Item 6 had a negative result. Under normal casework we would not test this item further. For this purposes of this test, the entire item was swabbed to test for blood and semen, both giving a negative result.
MJWKJ2	Item 1: Neg for blood and semen tests. Item 2: Positive for blood and semen tests. Item 3: Test for semen positive. There were no visable blood on the swabs and evidential value will be higher for semen thus tests for blood was not performed. Item 4: Swabs tested positive for blood. Was not tested for semen as swabs were clearly bloody and blood will have greater evidential value. Item 5: Tested positive for blood. Tested negative for semen. No visable hair, swabbed for sweat. Item 6: tested positive for blood. Tested positive for semen. No visable hair, swabbed for sweat. Item 1 - 6: Laboratory do not have a test for saliva.
MK4W24	1. Its used RapiSignal cassettes. 2. In our portafolio of service does not include testing for the determination of saliva. 3. -Christmas Tree coloration: Marca: DSSCR-LBIF- Fecha lote: 2014-10-17 exp fecha: 2015-04-17 Control (+) ok (-) ok. -PSA Serum Plasma/cassette lote: 201305090 exp:2015-10 Control (+) ok (-) ok -Thevenon and Roland Piramidon lote 2014-10-17 exp fecha: 2015-10 Control (+) ok (-) ok -Occult Blood cassette: Marca Orogenics lote 201305092 exp:2015-10 Control (+) ok (-) ok
MLJZZA	15-578 Item #1: Per ABA card Hematrace Technical Information sheet under Limitations: "Due to the extreme sensitivity of the test, trace levels of hemoglobin might be detected occasionally in body fluid samples other than blood (e.g. urine, semen, stool, saliva, vaginal fluid, perspiration)." Item #1 tested positive for saliva and negative for all other blood tests. In casework, Hematrace would not be conducted after obtaining the previous negative results. Therefore, the overall conclusion for blood is inconclusive. 15-578 Item #2,3,4: Saliva conclusion documented as positive results; however, very weak faint pink lines observed. Without further, information regarding the case scenario, we are required to perform testing for the commonly found body fluids. Due to the limited information provided, all testing was performed on items #3-6. 15-578 Item #2 ,4: The overall saliva conclusion was positive due to the faint pink lines. A false positive reaction may have been the result of the strong presence of blood. It has been observed in casework at this laboratory that the RSID saliva cards may give a positive reaction when blood is present in the sample. 15-578 Item #3: The overall saliva conclusion was positive due to the faint pink lines. A false positive reaction may have been the result of the strong presence of seminal fluid. Seminal fluid has been reported as having elevated levels of amylase causing a positive reaction in the RSID saliva cards. 15-578 Item #2: ALS documented as inconclusive due to interference with red/brown staining. 15-578 Item #3: Visual examination of item was negative, no apparent bloodstains were noted. 15-578 Item #5: ALS documented as negative due to orange tinge possibly interfering with fluorescence further testing for semen and saliva was conducted. 15-578 Item #6: ALS documented as negative; further testing for semen and saliva was conducted due to possible interference with apparent bloodstain.
MRN2YH	No blood (KM negative), seminal material (AP negative), saliva (Phadebas(a- Amylase), urine (Creatinine, DMAC, and Urea negative), or fecal material (Urobilinogen negative) was detected on the control swabs. Bovine, cat, chicken, deer, dog, swine, horse, sheep, and rabbit proteins were not detected in Item 2 or on the control swabs (Ouchterlony Double Diffusion).
MW4MTB	Saliva screening not conducted on items 5 - 6: Saliva screening (polilight and/or RSID) is not routinely

TABLE 3

WebCode	Additional Comments
	used in cases unless information received indicates the potential presence of saliva (e.g. spitting, oral rape), and/or unless items for testing are relevant to saliva screening (e.g. skin swabs, underpants). There was no saliva specific information recorded in the scenario for this case, and items 5 - 6 are not typical items reasonable to demonstrate the presence of saliva deposition in the process of an assault, therefore no saliva screening was conducted on these items (sweatband and rag). PSA testing on items 1 - 2: only done to demonstrate range of screening tests, not usually done on AP/microscopy negative swabs.
MYLQFM	In routine casework, I would not have looked for semen on Item 1-6 based on the sperm+ results from the victim's thigh. There was no indication that the victim's blood would be mixed with semen so testing for sperm cells on the black rag was not initially going to be done. The only reason I tested for semen in the human blood stain for Item 1-6 was because this is a PT, not because of the case scenario. The amylase result for Item 1-6 was initially determined to be inconclusive because the color of the extract fluid (red) prevented me from determining whether a faint line at the T (test) area was pink which would indicate the presence of saliva or gray which would be considered a negative result (shadow line). The extraction was repeated using a 1:4 dilution, and the results were negative for the presence of amylase.
NLWA22	Item - 1 to 6 No salivary test, - No saliva test in the laboratory. Item - 3 - tested also for blood as covering minutes depicted the victim was injured.
NMQZ8F	[From Table 2 - Items 1 - 6, Saliva tests: "Not Available"]
NNKJB3	Item 1: Four Swabs is NEGATIVE for Semen and Blood. Item 2: Four Swabs is NEGATIVE for Semen and POSITIVE for Blood. Item 3: Four Swabs is POSITIVE for Semen and NEGATIVE for Blood. Item 4: Four Swabs is NEGATIVE for Semen and POSITIVE for Blood. Item 5: One purple wrist sweatband is NEGATIVE for Semen and POSITIVE for Blood. Item 6: One Black rag[sic] is POSITIVE for Semen and Blood.
NVMV7Y	Item 1: Luminol negative, Hemastix negative and AP (Brentamine) negative . Saliva not tested because our lab does not do saliva tests. Item 2: Luminol and Hemastix positive. Semen not tested for because our SOP states that we should not test for semen when the samples are bloody. Item 3: AP (Brentamine) positive in 2 sec. Luminol and Hemastix negative. Blood tested for because the assailant may have been injured. Saliva not tested for since saliva tests are not performed in our lab. Item 4: Hemastix positive, negative for AP (Brentamine). Saliva not tested for. Item 5: No visible hair, sweat or epithelial cells removed. Hemastix positive and AP (Brentamine) negative. Item 6: Epithelial cells removed, AP (Brentamine) positive and Luminol positive. [From Table 2 - Items 1 - 6, Saliva Tests: "Our lab does not have or perform saliva tests."]
P3LF9U	Item 6: Black Rag was found on the scene, thus no ownership was established & therefore possible epithelial cells were collected from the exhibit. All tests performed were done to the laboratory SOPs.
P8EKQQ	Items 2, 3, and 4, had partial/incomplete clearing of the wells, which indicated that there was some amylase activity; however, low levels of amylase can be found in other body fluids such as blood and semen, which were detected on those swabs. Furthermore, no nucleated epithelial cells were observed under microscopy; thus the overall conclusion for saliva is negative, but the presence of amylase activity is inconclusive due to the partial clearing. Item 7 were control swabs. No AP, P30, Blood, Human hemoglobin, or amylase were detected on the control swab. For items 5 and 6, there is no indication in the case scenario that saliva may be present and there was no specific requests to test for saliva, thus I did not test for amylase.
PCM4Q4	The overall conclusion for blood on Item 3 (four (4) swabs with blue sticks) is inconclusive. Upon visual examination of the swabs, they did not appear to have any red/brown staining that would indicate the possible presence of blood. The swabs were tested for the possible presence of blood using Hemastix and the presumptive Hemastix result was negative. Therefore, a positive Hemastix result would not be expected on Item 3 because of the apparent lack of red brown staining and the lack of a presumptive Hemastix result. Due to the fact that the test is very sensitive trace levels of hemoglobin might be detected in other biological body fluids including urine, semen, saliva, vaginal fluid, stool samples, and perspiration. This could be another explanation for unexpected Hemastix results on item 3.

TABLE 3

WebCode	Additional Comments
PGHXMK	RSID saliva cards for Items 1-2 and 1-4 were run on 4/23/15. Both cards had a red background due to the sample. Assigned analyst interpreted the cards to be positive and took a photograph of each of the cards. No one was available to double read the result. The positive results could not be confirmed by another analyst because a clear pink line could not be seen in the photographs of the cards; therefore the result was changed from positive to inconclusive for both Items. [Analyst] consulted the technical leader and was instructed as follows: For Item 1-4, [Leader] instructed [Analyst] to not re-extract because of the case scenerio[sic] and based on the results that had already been obtained from the Item (we would not re-extract in this situation in casework since positive probative results were already found) For Item 1-2, [Leader] instructed [Analyst] to re-extract since the Item is intended for BIO fluid ID (see prior approval in QA notes). [Analyst] re-extracted (extraction #2) and ran the RSID saliva card. The card had a red background that prevented [Analyst] from interpreting the card, so the result was deemed inconclusive (this result was confirmed by another analyst). [Analyst] consulted the tech leader and [Analyst] was instructed to dilute extraction #2 (1:2 dilution and 1:4 dilution, if needed) and re-run the card(s). A 1:2 dilution was made from extraction #2 and the RSID saliva card was run. The card, again, had a red background that prevented [Analyst] from interpreting the card, so the result was deemed inconclusive (this result was confirmed by another analyst). A 1:4 dilution was made from extraction #2 and the RSID saliva card was run. The card was able to be interpreted as a negative result (this result was confirmed by another analyst).
PUQFU3	THE LABORATORY ONLY PERFORMS ANALYZES FOR FLUID IDENTIFICATION SEMEN AND BLOOD.
Q9JNQ8	Saliva testing not done in our laboratory.
QGVPDF	Ouchterlony-9 animal species: Bovine, Cat, Chicken, Deer, Dog, Swine, Horse, Sheep and Rabbit. Item 2 AP Inc. due to masking of color change by dark staining. Item 4 AP Inc. due to masking of color change by dark staining. Item 5 AP Inc. due to masking of color change by dark staining.
QP6ABX	Item 1 - 6 were not tested for saliva, we don't test for saliva in our laboratory. Item 3 - (swab 2) was tested with hemastix (swab of a swab), the reason I tested for blood on item 3 is because the victim stated that she may have injured the assailant. I tested for possible blood there because I don't know what happened in the incident.
RFLZM4	[From Table 2 - Items 1 - 6, Saliva tests: "Our lab does not test for saliva"]
RRR93Z	[From Table 2 - Items 1 - 6, Saliva Tests: "Our lab does not perform this test."]
T764WM	Item 2 - was not tested for presumable semen, standard operating procedure states "Bloody exhibits are not to be tested for semen, it should be treated as Brentamine/Semen positive. (BIO0013P). Item 4 - Was not tested due to the location where the exhibit was taken from. Item 5 - was not tested for saliva, our laboratory does not test for saliva.
TK8D2W	Item 2'B' not tested for semen as in our laboratory are treated as "Brentamine positive". Wrist sweatband and rag tested for semen to possible also link the suspect/assailant to the crime scene. Saliva tests not done as they were not applicable.
TLZ47B	No saliva tests were performed as the lab does not currently have a procedure or validated method.
TYRWLY	Examined item 6 -black rag under bright light and ALS with no stains/fluorescence noted. AP mapped item 6 with negative results.
U2EUK4	This laboratory does not test for saliva.
UBXEHL	Items #5 & #6 tested positive for KM. ALS of items #5 and #6 did not reveal any stains of significance. Further testing (AP, Micro) was not done since there were no stains revealed through ALS. Saliva testing by radial diffusion was conducted on Item #1 only. Due to Items 2, 3, 4, 5, 6 testing positive for either KM or Semen, testing for saliva was not conducted due to not wanting to consume any more of the sample.
UCRBUL	Item 3: Swab was tested for semen since there were no vaginal swabs received. The SOP for Evidence Processing mentions that body fluid swabs can be tested only if specified as possible semen. The swabs

TABLE 3

WebCode	Additional Comments
	<p>were taken from victim's inner thighs and could possibly have semen. Item 4: Victim mentioned that she may have injured the suspect and hence blood test was done on the visible blood on swab. Item 5: Since item belongs to victim, Hemastix was used on the visible blood stain. The rest of the wristband was tested with Brentamine. Item 6: Victim mentioned the rag might belong to the suspect and suspect might dispute that the item belongs to him/her, therefore presumable sweat was taken on item. Since no visible stains were detected, Brentamine was used to test for presumable semen. And then Luminol was used to test for presumable blood.</p>
UEFMR7	<p>RE: NT*: Tests for saliva are not performed at this laboratory. RE: INC results for items 1 and 3 (blood): Following this laboratory's statement reporting guidelines, the individual results for each test would be reported (i.e. LMG - negative and HemaTrace - positive) followed by statements addressing the limitations of both tests for both positive and negative results.</p>
UL2HUV	<p>No test was performed for saliva on items 1-6 due to the laboratory not having any test for that. No test perform for blood, because of the location where the swabs were collected from, it would have more evidential if semen is detected than blood (Item 3). No test for semen was done on Item 4, due to the location from where the swabs were collected. The victim stated that she may have injured the assailant, there for it is very likely that the blood on her arm is from the assailant which would link him to her.</p>
UMU9ZB	<p>Item #1 Blood test not performed because swabs were white. Saliva test not performed for all items because the lab don't do it.</p>
UVLQKX	<p>On Item 1: pheno neg however both hematrace and hemastix gave a weak positive result and therefore was called blood. On Item 2: RSID saliva was ran twice with an extremely weak positive result, (pink band) appearing between 7 - 10 minutes, therefore called saliva positive.</p>
V4EEPF	<p>1- Human blood was detected on the Items (2,4,5 and 6). 2- No blood traces were detected on the samples (1 and 3). 3- Seminal fluid was detected on the samples (3 and 6). 4- No traces of seminal fluid were detected on the samples (1,2,4 and 5). 5- Saliva Test is not carried out in our laboratory.</p>
VCRDH6	<p>For items #1 and #2, this laboratory would not accept swabs for which the laboratory did not know the source or type of body fluid needing to be tested nor would this laboratory perform all tests, presumptive and confirmatory, for every body fluid for which we have a screening test. All tests, presumptive and confirmatory, were performed on all samples provided even though this is not done in casework typically to conserve samples or because the laboratory has knowledge of the source of the body fluid being tested. For items #1 through #6, this laboratory starts with a visual exam of the evidence prior to any other testing. This laboratory reports for seminal fluid and spermatozoa separately. No overall conclusion about semen is provided. Saliva testing is not offered by this laboratory. For item #3, the HemaTrace test was not performed due to the results of the LMG test. For item #3 and #6, P30 card testing was not performed due to the microscopic results. For item #4 and #5, Microscope and P30 card testings were not performed due to the AP test results.</p>
VPEL84	<p>Per our laboratory standard operating procedures, when a negative presumptive test for blood is followed by a positive Hematrace test, the overall conclusion should be reported as inconclusive (1.3.5.6).</p>
WYVLA7	<p>Items 3 and 6 were not additionally tested for saliva as these ALS positive or inconclusive items were already found to be positive for semen.</p>
X4P4UN	<p>Item 3 swabs: Overall saliva conclusion was positive due to a faint pink line detected on the test line. However, it should be noted that this may be a false positive reaction possibly due to the strong presence of seminal fluid. Seminal fluid has been reported as having elevated levels of amylase causing a positive reaction in the RSID-saliva cards. Without further information regarding the case scenario, it is difficult to determine if an RSID-saliva test would have been necessary for the samples provided. However, based on our current SOP's regarding sexual assault, if limited information is provided, we are required to test for all of the commonly found body fluids which is why RSID-saliva was run on items 3 - 4.</p>
XARAGU	<p>Tests correspond to the routine tests validated in the laboratory.</p>

TABLE 3

WebCode	Additional Comments
XBLXX4	No urine or fecal testing was done as it is not required per agency policy unless alleged. Item 2: Inconclusive results for the presence of saliva (using the SAlIgAE test) were reported for this item as a color change in the liquid of the SAlIgAE test vial could not be discerned due to the heavy red brown staining of the swabs. Item 4: Inconclusive results for the presence of saliva (using the SAlIgAE test) were reported for this item as a color change in the liquid of the SAlIgAE test vial could not be discerned due to the heavy red brown staining of the sample. Item 5: Swabs were collected from this item for possible trace DNA. No PSA (semen) testing or microscopic examination for spermatozoa were performed as they are not required per agency policy when no fluorescence is detected and/or presumptive AP is negative. Item 6: Swabs were collected from this item for possible trace DNA. No semen testing (AP or PSA) or microscopic examination for spermatozoa were performed as they are not required per agency policy when no fluorescence is detected and/or presumptive AP is negative.
XCFPX2	Item 1: I am reporting the HemaTrace as inconclusive because I ran the sample two times and both times yielded a faint colorless band in the test area. I could not call positive because there was no color in the band; however, I could not call negative because there was a faint band present. Therefore I am reporting a presumptive negative sample and an inconclusive confirmatory test (HemaTrace) as an overall inconclusive result for the presence of blood.
XUUC7H	Items 3,4,5 & 6: Not tested for saliva/semen. Scenario (location of recovery) does not suggest/indicate that saliva/semen could be present on these items. Saliva is not routinely tested in sexual assault cases, but only when specified in the circumstances.
Y8KEBV	[From table 2 - Items 1 - 6, Saliva tests: "test not performed in this lab"]
YA4A2F	Item 1 - Nucleated epithelial cells and an elevated level of amylase activity were seen and may indicate the presence of saliva. Items 2 and 4 - A low level of amylase activity was seen but no nucleated epithelial cells were observed, inconclusive results for saliva. Items 3, 5, and 6 - The amylase results were inconclusive (small partial clearing on radial diffusion). Because of other body fluids present on these samples, the results for saliva are reported as negative.
YJA9MP	Item 1-6: Our laboratory does not have a presumptive test for saliva instead swabs are send directly to sample submission for presumable epithelial cells. Item 3 - Tested for semen only because it hold more evidential value based on location of sample. Item 4 - Tested for blood only because it holds more evidential value on location of sample and description of scenario. Item 5 & 6 semen and blood were both tested on exhibits as they play evidential value in case (charge and incident summary).
YK4YT4	Items #1-6 were not tested for saliva. My laboratory does not presently perform this procedure.
YKPATX	[From Table 2 - Items 3 - 6, Saliva Tests: "Lab only test for blood and semen in sexual assault cases"]
YR66KY	Reporting protocol in our laboratory for blood and saliva are as follows: Stains with the appearance of blood and giving a positive result for a presumptive chemical test are reported as blood. A presumptive test is used to screen for the presence of a substance but it cannot confirm its presence. The hematrace test gives positive results for human blood but can also give positive results for higher primate blood or blood from members of the Mustelidae family such as ferrets, stoats and weasels. As no case circumstances were given, no opinion has been formed about the species of origin of the blood staining. The screening test for saliva detects the presence of amylase which is found in saliva at high concentrations and in other biological fluids but at lower concentrations. A positive result in this test is reported as saliva was probably present.
YWLDZD	Item 6 - Black Rag One of the semen positive areas corresponded with bloodstaining on item. (borders of staining aligns. This area of mixed staining (blood/semen) indicates that they have been deposited at the same time.
Z6BNKR	1. According to the analyzes performed on samples of swabs taken from a location on victim's inner thigh (Item 3), and black rag (Item 6), sperm was detected. 2. According to the analyzes performed on samples of swabs (Item 1), swabs (Item 2), swabs taken from a location on victim's arm (Item 4), and purple wrist sweatband (Item 5), sperm was not detected. 3. According to the analyzes performed on samples of swabs (Item 1), and swabs taken from a location on victim's inner thigh (Item 3), human blood was not detected. 4. According to the analyzes performed on samples of swabs (Item 2), swabs

TABLE 3

WebCode	Additional Comments
ZBJTNX	taken from a location on victim's arm (Item 4), purple wrist sweatband (Item 5), and black rag (Item 6), human blood was detected.
ZG3F7V	Items #3 and #4 would be sent for DNA analysis. The victim and suspect DNA would be requested. If no suspect is developed and a male profile is obtained from the stains the profile would be entered into CODIS.
	Lab does not test for saliva.

Appendix: Data Sheet

Collaborative Testing Services - Forensic Testing Program

Test No. 15-578: Body Fluid Identification Test

DATA MUST BE RECEIVED BY May 11, 2015 TO BE INCLUDED IN THE REPORT

Accreditation Release Statement

CTS submits external proficiency test data directly to ASCLD/LAB and ANAB. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB and/or ANAB.
(Accreditation Release section on the last page must be completed and submitted.)
- This participant's data is **NOT** intended for submission to ASCLD/LAB or ANAB.

Scenario (this scenario applies only to Items 3 - 6):

Police are investigating the rape of a woman attacked while she was jogging on a trail. The police arrived at the scene shortly after the incident. The victim described the incident and stated that she may have injured the assailant. The following items are being submitted to your department for examination. One envelope containing four duplicate swabs (Item 3) which were taken from a location on the victim's inner thigh. One envelope containing four duplicate swabs (Item 4) which were taken from a location on the victim's arm. A purple wrist sweatband (Item 5) that had been worn by the victim during the incident. A black rag (Item 6) that the victim believed had been left by the assailant.

Items Submitted (Sample Pack BF11):

- Item 1 Swab (provided as 4 duplicates) - intended for general screening for body fluids tested in normal laboratory casework; scenario not applicable
- Item 2 Swab (provided as 4 duplicates) - intended for general screening for body fluids tested in normal laboratory casework; scenario not applicable
- Item 3 Swab (provided as 4 duplicates) - taken from a location on victim's inner thigh
- Item 4 Swab (provided as 4 duplicates) - taken from a location on victim's arm
- Item 5 One purple wrist sweatband
- Item 6 One black rag
- 1 package of control swabs (unused)

Online Data Entry

Visit www.cts-portal.com to enter your proficiency test results online. If you have any questions please do not hesitate to contact CTS.

Please return all pages of this data sheet.

Page 1 of 10

Instructions:

Please indicate the overall conclusion for each body fluid using the check boxes provided. List the tests performed and the results of each test. Item descriptions (as applicable) are provided at the top of each Item page.

For the purposes of this test, all swabs within an Item have been prepared as duplicates in order to provide sufficient sample quantity. A package of unused swabs is also provided for control purposes.

Please use the abbreviations listed in this response key to fill in the Screening Test tables. This is not an all inclusive list of tests, and should not be used to determine what tests should be performed. TESTS NOT ON THIS LIST MAY BE USED FOR SCREENING.

Test	Abbreviation	Test	Abbreviation
Acid Phosphatase	AP	Ortho-tolidine	O-tol
Alternate Light Source	ALS	Phenolphthalein-Tetramethyl benzidine	PTMB
Kastle Meyer	KM	Prostate Specific Antigen	PSA
Leucomalachite Green	LMG	Rapid Stain Identification	RSID
Microscopic	Micro	Tetramethyl benzidine	TMB

RELEASE OF DATA TO ACCREDITATION BODIES

The following Accreditation Releases will apply only to:

Participant Code:

WebCode:

for Test No. **15-578: Body Fluid Identification**

This release page must be completed and received by **May 11, 2015** to have this participant's submitted data included in the reports forwarded to the respective Accreditation Bodies.

ASCLD/LAB RELEASE

If your lab has been accredited by ASCLD/LAB and you are submitting this data as part of their external proficiency test requirements, have the laboratory's designated individual complete the following.

The information below must be completed in its entirety for the results to be submitted to ASCLD/LAB.

ASCLD/LAB Legacy Certificate No. _____ ASCLD/LAB International Certificate No. _____

Signature _____ Date _____

Laboratory Name _____

Location (City/State) _____

ANAB RELEASE

If your laboratory maintains its accreditation through ANAB, please complete the following form in its entirety to have your results forwarded.

ANAB Certificate No. _____

Signature and Title _____ Date _____

Laboratory Name _____

Location (City/State) _____

Return Instructions

Accreditation Release

Please submit the completed Accreditation Release at the same time as your full data sheet. See Data Sheet Return Instructions on the previous page.
