This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack consisted of two items. Item 1 contained 200 mg of powder consisting of approximately 12% dextroamphetamine sulfate and 88% lactose. Amphetamine is a Schedule II controlled substance in the United States. Item 2 contained 120 mg of powder consisting of acetaminophen.

SAMPLE PREPARATION-

The dextroamphetamine sulfate in Item 1 was a pure powder that was combined with lactose. The two powders were mixed thoroughly to ensure homogeneity. The acetaminophen in Item 2 was a pure powder.

ITEM 1 (PREPARATION): Approximately 200 mg of the powder containing dextroamphetamine sulfate was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag. The small zip top bag was heat sealed and then placed into a pre-labeled envelope.

ITEM 2 (PREPARATION): Approximately 120 mg of the acetaminophen powder was weighed out and deposited into a glassine bag which was folded and secured with a label. The folded glassine bag was placed into a small zip top bag. The small zip top bag was heat sealed and then placed into a pre-labeled envelope.

SAMPLE PACK ASSEMBLY: One of each of the Item 1 and Item 2 envelopes was placed into a larger pre-labeled sample pack envelope.

VERIFICATION: The above substances were identified by predistribution laboratories, who used the following combined list of techniques: color tests, crystal tests, TLC, UV, FTIR, and GC/MS.

Summary Comments

This test was designed to allow participants to assess their proficiency in the qualitative analysis of questioned samples that may contain controlled substances. Item 1 contained a powder consisting of lactose and approximately 12% dextroamphetamine sulfate. Amphetamine is a Schedule II controlled substance in the United States. Item 2 contained a powder consisting of acetaminophen (See Manufacturer's Information for preparation details).

Of the 656 participants that reported results for Item 1, 654 (99.7%) reported amphetamine. The remaining two participants reported "No controlled substance detected/identified". For Item 2, 655 (99.8%) of 656 participants reported "No controlled substance detected/identified", acetaminophen or paracetamol. The remaining participant reported cocaine.

The most common examination methods utilized for both Items include GC/MS, color tests, and FTIR.
