

Latent Print Examination Test No. 18-5171/2/5 Summary Report

Each sample pack of this test contained one of the following: digitally produced photographs (18-5171), a DVD containing digital images (18-5172), or directly downloadable digital images (18-5175) of twelve latent prints and four sets of known finger and palm imprints. Participants were asked to compare these items and report their findings. Data were returned from 479 participants: 334 for 18-5171, 98 for 18-5172, and 47 for 18-5175 and are compiled into the following tables:

This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

Manufacturer's Information

Each sample pack contained either photographs or digital images consisting of known finger and palm imprints of four individuals and twelve latent "crime scene prints". Nine of the twelve latent prints were made by individuals for whom inked imprints were provided; three were from an individual for whom inked prints were not provided.

SAMPLE PREPARATION: All inked known fingerprints and lifted, powder-dusted latent prints were scanned directly into image editing software and assembled onto test templates. Background noise of each latent print was digitally reduced. The latent prints were provided in 1X and 2X magnification on the physical photographs.

VERIFICATION: Prior to predistribution, the latent prints were examined and confirmed by an external advisor to present appropriate detail, clarity, and difficulty. The expected Identification and Not Identified responses were reported by the predistribution examiners.

SAMPLE PACK ASSEMBLY: Once verification was complete and sample preparation was done, each photo set was packaged and sealed. Each DVD was checked to ensure all images were accessible. Digital download media were zipped and uploaded to the CTS portal.

Summary Comments

This test was designed to allow participants to assess their proficiency in the identification of latent finger and palm prints. Nine latent prints (Q1, Q3, Q5-Q9, Q11-Q12) were made by one of four individuals for whom inked prints were provided (Items A-D). Three latent prints (Q2, Q4, Q10) were from an individual for whom inked prints were not provided (Refer to the Manufacturer's Information for preparation details).

Of the 479 responding participants, 436 (91%) reported the expected nine identifications and three non-identifications. There were forty-three (43) participants who reported inconsistent results for one or more of the latent prints; however, over 95% consensus was achieved for each individual print. Outliers to the consensus are described as follows, with the types of outlying responses provided in parentheses following each description.

There were thirteen (13) participants who attributed a latent to a different finger or palm than that established by the consensus (Other Identifications). There were twenty-eight (28) participants who did not identify one or more latent prints for which known exemplars were provided (Not Identified). Within these twenty-eight participants, three participants also attributed a latent to a different finger or palm than that established by the consensus (Other Identifications and Not Identified); additionally, one of the twenty-eight participants left the response for Q10 blank. Finally, there were two participants who did not report a response for the non-identification items of Q2, Q4, and Q10. The most common inconsistent result was the missed identification of Item Q8, where fourteen (14) participants did not identify it to the known exemplar and two identified it to a different known exemplar.

Comparison of the latent prints on lab items 1.1(Q1-Q12) to the known prints of lab items 1.2 - 1.5 revealed there is sufficient information in agreement based upon features, sequences and spatial relationship to conclude that the latent fingerprint on lab item 1.1 (Q3) and the latent palm print on lab item 1.1 (Q7) were made by the same individual whose known prints appear on lab item 1.2 (Tara Chamblor). Comparison of the latent prints on lab items 1.1(Q1-Q12) to the known prints of lab items 1.2 - 1.5 revealed there is sufficient information in agreement based upon features, sequences and spatial relationships to conclude that the latent fingerprints on lab items 1.1 (Q8) and 1.1 (Q11) and the latent palm print on lab item 1.1 (Q1) were made by the same individual whose known prints appear on lab item 1.3 (Morgan Jones). Comparison of the latent prints on lab items 1.1(Q1-Q12) to the known prints of lab items 1.2 - 1.5 revealed there is sufficient information in agreement based upon features, sequences and spatial relationships to conclude that the latent fingerprint on lab item 1.1 (Q6) was made by the same individual whose known prints appear on lab item 1.4 (Deanna Monroe). Comparison of the latent prints on lab items 1.1(Q1-Q12) to the known prints of lab items 1.2 - 1.5 revealed there is sufficient information in agreement based upon features, sequences and spatial relationships to conclude that the latent fingerprints on lab items 1.1 (Q5), 1.1 (Q12) and the latent palm print on lab item 1.1 (Q9) were made by the same individual whose known prints appear on lab item 1.5 (Jessie Anderson). Comparison of the latent fingerprints on lab items 1.1(Q2), 1.1 (Q4) and 1.1(Q10) to the known fingerprints of items 1.2 – 1.5 excludes the individuals whose known fingerprints appear on lab items 1.2 - 1.5 as the source of the latent prints. Photographs of the unidentified latent prints are retained in our files for comparison to the known prints of any individuals that may be requested.</p>

Y9T6BP-5175	<p>These identifications were established by the agreement of friction ridge formations, in sequence, with sufficient uniqueness to identify. Q2, Q4 and Q10 were eliminated from the known impressions. Elimination is established when there is sufficient difference of ridge pattern and/or ridge detail.</p>

Accreditation Release Statement

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB and A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section on the last page must be completed and submitted.)
- This participant's data is **NOT** intended for submission to ASCLD/LAB, ANAB or A2LA.

Scenario:

Police are investigating a break-in at a local storage unit rental facility. Two siblings, Tara Chamblor and Morgan Jones, claim that several items of value have gone missing from their shared storage unit, and there is evidence of tampering on the lock. Two female individuals seen on the security cameras in that area of the facility have been identified and fingerprinted. Investigators have supplied you with images of twelve latent prints collected from the scene. They have also provided you with images of known prints from the two renters, as well as the two suspects.

Items Submitted (Sample Pack LPP2 -Photographs):

- Item A: Known finger and palm prints of renter Tara Chamblor.
- Item B: Known finger and palm prints of renter Morgan Jones.
- Item C: Known finger and palm prints of suspect Deanna Monroe.
- Item D: Known finger and palm prints of suspect Jessie Anderson.
- Items Q1-Q12: Twelve latent prints recovered from the scene.

1.) Indicate the results of your comparisons by marking the appropriate boxes.

Please indicate the specific finger or palm identified for each latent print in this test. If an identification cannot be made, check "Not Identified," do NOT leave a blank response. If the identification of a latent fingerprint is made utilizing the palm print exemplar, please indicate **ONLY** the identified finger in the chart. The exemplar used for identification (e.g. LP, RP) may be documented in the Additional Comments section, but is not required.
