This report contains the data received from the participants in this test. Since these participants are located in many countries around the world, and it is their option how the samples are to be used (e.g., training exercise, known or blind proficiency testing, research and development of new techniques, etc.), the results compiled in the Summary Report are not intended to be an overview of the quality of work performed in the profession and cannot be interpreted as such. The Summary Comments are included for the benefit of participants to assist with maintaining or enhancing the quality of their results. These comments are not intended to reflect the general state of the art within the profession.

Participant results are reported using a randomly assigned "WebCode". This code maintains participant's anonymity, provides linking of the various report sections, and will change with every report.

## **Manufacturer's Information**

Each sample pack consisted of two known bloodstains on FTA Micro cards (Items 1 & 2), and two questioned stains; one on clean heather grey fabric (Item 3) and one on clean, light blue fabric (Item 4). Participants were requested to analyze these items using their existing protocols.

**SAMPLE PREPARATION:** The stains in Items 1, 2, and 3 were prepared using human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. The stain in Item 4 was a mixture prepared from human whole blood and semen. The semen sample was received frozen from an outside supplier. The semen sample was first thawed and mixed 1:1 with TAE buffer, then mixed 1:1 with the blood. Items 1 (75  $\mu$ l) and 3 (50  $\mu$ l) were each created using blood collected from the same female donor. Item 2 (75  $\mu$ l) was created using blood collected from a male donor. Item 4 (50  $\mu$ l) was a 1:1 mixture that was prepared using blood from the same female donor used for Items 1 & 3 and semen from the same male donor used for Item 2. Stains from different sources were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on March 05, 2018 following completion of verification stage.

**SAMPLE SET ASSEMBLY:** For each sample set, all four Items (1-4) were packed into separate envelopes and then placed together in a pre-labeled sample pack envelope. The sealed sample pack envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

**VERIFICATION:** Laboratories that conducted predistribution analysis of the samples reported consistent allelic results and confirmed the manufacturer's expected associations.

## **Summary Comments**

The DNA-Semen test is part of the DNA Sample Specific Series; where participants are advised of the body fluid(s) that make up the questioned stains. The test is designed to allow participants to assess their proficiency in the analysis of dried stains containing potential mixtures. Participants were supplied with two "known" bloodstains (Items 1 and 2) and two "questioned" stains (Items 3 and 4). Items 1 and 3 were created using blood from the same female donor. Item 2 was created using blood collected from a male donor. Item 4 was a mixture containing blood from the female donor used for Items 1 and 3 as well as semen from the same male donor used for Item 2. (See Manufacturer's Information for preparation details)

Of the 226 participants that returned results, 196 reported DNA interpretations.

For the Item 3 stain, all 192 participants that reported interpretations both included the victim (Item 1) as a possible contributor and excluded the suspect (Item 2).

For the Item 4 stain, there were 195 participants that included the victim (Item 1) as a possible contributor, while one participant reported a result of Inconclusive. All 196 participants included the suspect (Item 2) as a possible contributor to the Item 4 stain.

Forty participants reported allelic results that differed from consensus/predistribution results. Of these, 26 participants were reporting additional alleles at one or more loci. Additionally, six participants were missing results at one or more loci. Finally, there were seven participants that reported a combination of missing alleles and additional alleles at one or more loci. Of these 40 participants, it was noted that 33 made use of Probabilistic Genotyping software.

There continues to be an increase in the number of participants reporting the use of Probabilistic Genotyping (PG). In this test, 46 laboratories reported the use of PG software. Of these, most participants (42) reported the use of the STRmix software. While reviewing the data submitted for this test, differences between when the software was used were noted. These differences were identified not only between labs but also within participants from the same lab. Among all the participants that submitted results using PG software, 21 participants used it across all four items whereas 21 participants only made use of it for both Item 3 and the Item 4 mixture. Finally, there were four participants that used the software only for the Item 4 mixture.

## TABLE 5

WebCode	Additional Comments
23CGE2	'DNA Result' = peak height intensity less than mixture threshold. (DNA result) = Peak height intensity less than stochastic threshold. A primary contributor was indicated for the e.cell fraction of Item 4 at the following loci: D3S1358, vWA, D16S539, CSF1PO, TPOX, Amelogenin, D8S1179, D21S11, D18S51, D2S441, D19S433, TH01, FGA, D22S1045, D5S818, D13S317, D7S820, SE33, D10S1248, D1S1656, D12S391 and D2S1338.
32XW3N	The probabilistic genotyping software STRmix® was used on this proficiency. We reported out all possible alleles generated in the Genotype Probability Distribution output files.
36VDDW	Interpretation not reported. Test participant functions as a Y-Screen technician and does not perform interpretations.
3MZLUK	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks. Male screening batch review was performed on CTS 18-5702 Items 3 and 4.
3TMBEU	1-4.1 - non-sperm fraction: major female profile; minor profile is consistent with carryover from sperm fraction. 1-4.1 - sperm fraction: single source male profile.
42R3WM	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks.
436C8A	The results reported as Item 4 are from a Maxwell automated extraction where DNA derived from any cell type would be extracted. A manual differential extraction was also performed on Item 4, however as no epithelial cells were observed when a slide from the first stage of the extraction was viewed microscopically, no separation of fractions was required or performed. This is per laboratory procedure. These results were reported as additional DNA results.
43NFJF	Male screening sample preparation, laboratory processing, and interpretation were performed by this analyst. STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks.
48HC7L	Genotype data was not entered for this proficiency because this analyst is only qualified/authorized to process samples through differential extraction at this time. Additionally, this analyst is qualified to prepare non-differential samples for extraction using an automated workflow. The reference samples were prepared in this manner for this proficiency.
6D3UZM	Male screening sample preparation and laboratory processing were performed by another analyst. Interpretation was performed by this analyst. STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks.
6HDQ4X	Multiple extractions and quants of item 4 sperm fraction showed an auto to Y ratio between 0.3 and 0.4. This wasn't an issue for our laboratory, but I could see how it could be a problem for other labs - if it's showing over twice as much Y DNA as autosomal DNA. Just FYI.
6N7PHT	NR = No Result. [] = Weaker alleles.
6PFUVG	There is a problem with the quality of the sample Item 4. This blood and semen mix fell short to provide enough DNA in the epithelial cell fraction to obtain a full profile. I re-amplified the original extract, I re-extracted the sample, I concentrated the epithelial cell fraction using the Amicon concentrating device, and was still unable to obtain a full profile. A partial profile was obtained and the resulting de-convolution of the sample using STRmix reflects an inconclusive result for the female victim in the epithelial cell fraction of this sample. I attempted all techniques we have in our SOP to obtain a full profile and was unsuccessful. Evidence profiles were interpreted using a probabilistic genotyping approach. STRmix software was used to aid interpretation, which includes biological modelling for plus and minus stutter. Any allele included in a proposed, weighted genotype combination in the STRmix output was reported in the DNA Results tables of this form. This approach may result in at least one stutter peak being included in

	the DNA Results tables.
6RJ4TY	NR = "No Results"
6VKVUP	NR = No results. [] = minor alleles.
77UV23	NR=no results. Item 3 was negative for male screen, so item 3 was not further tested with STR.
7M4E3F	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is admitted that some stutter peaks can be recognized as true peaks.
7Q2DHU	NR = No Results
89FBZW	(DNA Result) = Peak height intensity less than stochastic threshold. 'DNA Result' = Inconclusive. Item 4e: A primary component was determined at D3S1358, vWA, D16S539, CSF1PO, TPOX, D8S1179, D21S11, D18S51, D2S441, D19S433, TH01, FGA, D22S1045, D5S818, D13S317, D7S820, SE33, D10S1248, D1S1656, D12S391 and D2S1338. A secondary component was determined at D3S1358, vWA, D16S539, CSF1PO, TPOX, D8S1179, D21S11, D18S51, D2S441, D19S433, TH01, FGA, D22S1045, D5S818, D13S317, D7S820, SE33, D10S1248, D12S391 and D2S1338.
8EL6R8	NR = No Results
8NUZ7Q	NR=No Result. []=weaker allele.
8RV4XD	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks. Male screening sample preparation and laboratory processing were performed by another analyst. Interpretation was performed by this analyst. No DNA or Y-STR laboratory work was performed by this analyst, only data interpretation was performed.
8U2TX2	Item 3 was not DNA tested as it tested negative for male DNA. N/A = Not Applicable.
93MTW6	N.D. : Not Detected
98HBJW	Minor profile in epithelial fraction of item 4 is from incomplete differential separation of sperm fraction.
9VPKMC	Evidence profiles were interpreted using a probabilistic genotyping approach. STRmix software was used to aid interpretation, which includes biological modelling for plus and minus stutter. Any allele included in a proposed, weighted genotype combination in the STRmix output was reported in the DNA Results tables of this form. This approach may result in at least one stutter peak being included in the DNA Results tables. Unable to obtain full victim profile from the E-cell fraction of item 4 (stain from pants from victim). Re-amplified extract (15ul, maximum amount), still did not obtain full victim profile. Then re-extracted using a larger portion of the stain, concentrated E-cell fraction with amicon to ~20ul, re-amplified the maximum amount, did not obtain a DNA profile.
A27YUA	NR = No Result. () = Weaker Alleles.
A68ZWR	1. Item 1 and Item 2 were extracted using in-situ method. 2. Item 3 was extracted using DNA IQ kit and run using TECAN Freedom Evo 150. 3. Item 4 was extracted using Chelex extraction method. 4. Item 3 and Item 4 were quantified using Quantifiler Human DNA Quantification kit. 5. Item 1 and Item 2 were amplified using AmFISTR Identifier Direct kit while Item 3 and 4 were amplified using AmFISTR Identifier Plus kit. Electrophoresis was carried out using Genetic Analyzer 3500xL. 6. Y-STR amplification was carried out on Item 2 and Item 4 using AmFISTR Y-Filer kit. Electrophoresis was carried out using Genetic Analyzer 3130xL. 7. Reagent blank, positive control and negative control were incorporated throughout the analysis.
ANK83Y	NR= No Results. Item 3 not STR typed; Item was male screen negative.
AYMTHU	Y-STR not performed on Item 1 because no male DNA detected on quantification. Weak alleles are enclosed with brackets []. Yfiler results for Item 3 are NR-No Results. Quantifiler Trio results gave a very low T.Y of .175 picograms per microliter which is why Y-STR analysis was performed.
AYQMDE	Two separate differential extractions were performed on Item 4 (manual differential and QIAcube-facilitated differential). The results reported for this item represent a composite profile covering

TABLE 5

WebCode	Additional Comments
	all alleles obtained across both extraction methods.
BGZ28D	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks. Item 4 (pants from victim) was extracted twice due to a low epithelial profile. The Y-STR epithelial results were from the second extraction and the maximum volume was amplified.
BLD4RN	DYS391 is in both the GlobalFiler and PowerPlex Y23 amplification kits. Two separate differential extractions were performed on Item 4 (manual differential and QIAcube-facilitated differential). The results reported for this item represent a composite profile covering all alleles obtained across both extraction methods. The additional peak foreign to the victim and suspect at D22S1045 in Item 4 may be attributed to elevated stutter, with both forward and reverse stutter compounding. The reverse observed stutter percentage is 15.35% and the validated [Laboratory] stutter percentage is 13.91%. The forward observed stutter percentage is 11.89% and the validated [Laboratory] stutter percentage is 6.26%.
BREXTQ	Serology tests of Item 3 are listed as below: the KM test is positive; the ACP test is negative; microscopic analysis of spermatozoa is negative. Serology tests of Item 4 are listed as below: the KM test is positive; the ACP test is positive; microscopic analysis of spermatozoa is positive.
CTCUBD	"Genotype data was not entered for this proficiency because this analyst is only qualified/authorized to process samples through differential extraction at this time. Additionally, this analyst is qualified to prepare non-differential samples for extraction using an automated workflow. The reference samples were prepared in this manner for this proficiency."
D6MLED	STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks. A full profile was not developed for the epithelial cell fraction of the victim's pants (Item 4). Every attempt was made to obtain interpretable data at every locus, as the sample was amplified with the highest possible sample volume, injected for the maximum validated injection time, and finally re-extracted.

DXFECE	In Item 4, the loci that had SOME alleles detected but were interpreted as 'not suitable for comparison' (due to peaks being present below the analytical threshold) were entered as "inc" in the answer sheet (rather than leaving them blank). We do not have probabilistic genotyping.
E6WARA	**STRmix probabilistic genotyping software was used to aid in the determination of genotype combinations. No stutter filters are applied when using this software and it is acknowledged that some stutter peaks can be recognized as true peaks.**

VKA9TR	Two separate differential extractions were performed on Item 4 (manual differential and QIAcube-facilitated differential). The results reported for this item represent a composite profile covering all alleles obtained across both extraction methods. Also, in the epithelial cell fraction of Item 4, elevated stutter resulting in a called "16" occurred at locus D22S1045 in both differential extractions. Our laboratory's validated minus one repeat stutter percentage for that locus is 13.9%. The RFU values of "16" peak was 14.1% and 14.3% the "17" peaks in the manual and QIAcube-facilitated differentials, respectively. The "16" peaks also fall into the plus one stutter positions of the "15". The elevated peak height may be due to the combination of the two types of stutter.

### Accreditation Release Statement

CTS submits external proficiency test data directly to ASCLD/LAB, ANAB, and A2LA. Please select one of the following statements to ensure your data is handled appropriately.

- This participant's data is intended for submission to ASCLD/LAB, ANAB, and/or A2LA. (Accreditation Release section on the last page must be completed and submitted.)
- This participant's data is **NOT** intended for submission to ASCLD/LAB, ANAB or A2LA.

#### Scenario:

Police are investigating the sexual assault of a female victim. The victim claims that while walking back to her car at night from the supermarket, a male suspect forced his way into her car and proceeded to sexually assault her. Officers reviewed the supermarket security tape and identified a car that matched the victim's description of the suspect's car. The suspect was soon identified and apprehended. Investigators are submitting stains from the victim's car seat cover (Item 3) and from the victim's pants (Item 4). Screening has been performed on both samples with the following results: Item 3 (victim's car seat cover) is positive for blood, and Item 4 (victim's pants) is positive for blood and semen. The screening lab is submitting these samples (Items 3 and 4) along with known blood samples from the female victim and male suspect.

#### Items Submitted (Sample Pack S2):

- Item 1: Known blood from the female victim
- Item 2: Known blood from the male suspect
- Item 3: Questioned blood stain from the victim's car seat cover (heather grey)
- Item 4: Questioned blood and semen mixture from the victim's pants (light blue)

Reporting of YSTR alleles generated from primarily autosomal STR multiplex systems.

- 1) The YSTR loci commonly generated using STR multiplex systems are now included in the STR section. (DYS391, DYS570, DYS576, Y Indel)
- 2) There is no longer a need to transcribe YSTR results from STR multiplex systems to the YSTR section.

For probabilistic genotyping software, a text field has been added directly below the amplification kit section for each item to capture which software was used.

Additional DNA Results:
